## *Sound reinforcement systems in hostile environments*

by John Mordaunt M Istsce, Acoustic Consultant

Thursday 26th April 2007 at 7:00pm

Lecture Theatre 1, Cambridge University Computer Laboratory  
J J Thompson Avenue, Madingley Road, Cambridge

John's presentation is on 'Sound reinforcement systems in hostile environments' where he will discuss factors affecting the production of intelligible speech in hostile environments. John addresses the adverse environmental issues and applies the latest technology to assess and improve speech performance.

**John Mordaunt** was educated at Guildford technical college studying electrical & electronic engineering and has spent more than 45 years in the sound business.

John spent the early years of his career with Decca record company setting and maintaining standards in the manufacture of record discs. Later he joined Philips sound division in the field of sound system design of products and systems where he was involved with many types of sound system installations. He has designed systems for nuclear power installations, shipping, industrial complexes, commerce, cathedrals, churches, theatres and leisure complexes to name but a few.
