<b>Synopsis</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
References	8
<b>2 Device physics, modeling, and technology for nano-scaled semiconductor devices</b>	<b>17</b>
2.1 Bulk MOSFETs and related device structures	17
2.1.1 Conventional field-effect transistor (FET) physics and limitations	18
2.1.2 Alternative FET-related structures on silicon bulk and other materials	34
2.2 Advanced FET-related devices	39
2.2.1 Introduction	39
2.2.2 Silicon-on-insulator FET technology	43
2.2.3 Ultra-thin FDSOI MOSFETs	69
2.2.4 Double-gate and FinFETs	79
2.2.5 Silicon multigate nanowires	92
2.2.6 Junctionless transistors	98
2.2.7 Tunnel field-effect transistor	100
2.3 Different approaches for semiconductor device modeling and simulation	109
2.3.1 TCAD tools: technological motivation and general outlook	109
2.3.2 Drift-diffusion transport model	113
2.3.3 Semi-classical transport and higher moments transport models	114
2.3.4 Stress- and orientation-dependent mobility in silicon	121
2.3.5 Mobility in ultra-thin body of strained SOI transistors	123
2.3.6 Quantum and quantum-corrected transport models	128
2.4 Alternative materials and device structures	132
2.4.1 Introduction	132
2.4.2 Nanostructured materials, amorphous and SiGe alloys, and its applications	135
2.4.3 Photodetectors and micro-machined bolometers	141
2.4.4 CMOS process-compatible silicon-in-package (SiP)	151

2.5	Conclusions	154
	Acknowledgments	156
	References	156
<b>3</b>	<b>Advanced device characterization techniques</b>	<b>187</b>
3.1	Conventional electrical characterization and modeling techniques	187
3.1.1	Measurement and extraction of basic electrical parameters	188
3.1.2	Parasitic effects and de-embedding under nonconventional bias conditions	195
3.2	Reliability, degradation, lifetime prediction, and failure	215
3.2.1	Bias temperature instability of high-k materials beyond HfO <sub>2</sub>	215
3.2.2	Hot carriers in nanoscale devices	241
3.2.3	Filamentary conduction in thin dielectric films	255
3.3	Alternative approaches for device characterization including magnetic fields	281
3.3.1	Classical magneto transport in FET-based devices	282
3.3.2	Magneto-tunneling and nonhomogeneous magneto conductance	287
3.3.3	Conductance properties under constant and time-dependent magnetic fields	302
3.4	Conclusions	313
	Acknowledgment	321
