|--|-------------|
| <b>Foreword</b>  | <b>xi</b>   |
| <b>Introduction on the context and NGD theoretical bases</b>   | <b>xiii</b> |
| <i>Blaise Ravelo</i>   |             |
| <b>1 Microstrip line negative group delay circuits and applications to communication systems</b>                           | <b>1</b>    |
| <i>Yongchae Jeong and Girdhari Chaudhary</i>   |             |
| Abstract   | 1           |
| Keywords   | 1           |
| 1.1 What is negative group velocity and negative group delay?  | 1           |
| 1.2 Reflection-type NGD circuits using microstrip line resonators  | 2           |
| 1.2.1 Realization of two-port reflection-type NGD circuits using hybrid coupler  | 3           |
| 1.2.2 Reflection-type NGD circuits using $\lambda/4$ transmission line resonator   | 3           |
| 1.2.3 Low insertion loss reflection-type NGD circuits using coupled lines  | 6           |
| 1.2.4 Type-I: short-circuited coupled line with resistor-terminated isolation port   | 7           |
| 1.2.5 Type-II: short-circuited coupled line with open-circuited isolation port and series-connected resistor at input port | 9           |
| 1.2.6 Implementation of low insertion loss NGD circuits  | 11          |
| 1.3 Transmission-type NGD circuits   | 15          |
| 1.3.1 Realization of transmission-type NGD circuits using DGS and DMS  | 15          |
| 1.4 NGD circuit using finite unloaded quality factor resonators  | 19          |
| 1.4.1 Coupling matrix analysis with finite unloaded quality factor resonators: S-parameters and GD                         | 20          |
| 1.4.2 Experimental performances  | 23          |
| 1.5 Applications of NGD circuit in microwave communication systems   | 26          |
| 1.5.1 Efficiency enhancement of feedforward amplifier using NGD circuit  | 26          |
| 1.5.2 Feedforward amplifier without delay element  | 26          |
| 1.5.3 Signal suppression loop analysis for GD mismatch   | 27          |
| 1.5.4 Experimental results   | 29          |
| 1.5.5 Bandwidth enhancement of analog feedback amplifier using NGD circuit   | 30          |
| 1.5.6 Analog feedback amplifier using NGD: operating principle   | 30          |
| References   | 32          |

|          |   |           |
|----------|---|-----------|
| <b>2</b> | <b>Negative group delay power dividers</b>  | <b>37</b> |
|          | <i>Girdhari Chaudhary and Yongchae Jeong</i>  |           |
|          | Abstract  | 37        |
|          | Keywords  | 37        |
|          | 2.1 Context and introduction  | 37        |
|          | 2.2 Wilkinson power divider with arbitrarily prescribed NGD                         | 38        |
|          | 2.2.1 Theoretical analysis  | 39        |
|          | 2.2.2 Experimental results  | 42        |
|          | 2.3 Rat-race coupler with arbitrary prescribed NGD                                  | 44        |
|          | 2.3.1 Analytical analysis of arbitrary power division ratio<br>NGD rat-race coupler | 44        |
|          | 2.3.2 Experimental results $k = 1$  | 50        |
|          | 2.3.3 Experiment Results: $k = 0.52$  | 52        |
|          | 2.4 Arbitrary power division ratio power divider with<br>positive GD and NGD        | 53        |
|          | 2.4.1 Analytical analysis   | 53        |
|          | 2.4.2 Implementation and experimental<br>performances $k = 16.9$ dB                 | 57        |
|          | 2.4.3 Implementation and experiment performances: $k = 20$ dB                       | 57        |
|          | 2.5 Power divider with positive GD and NGD: coupling<br>matrix approach             | 58        |
|          | 2.5.1 Mathematical analysis   | 59        |
|          | 2.5.2 Even-mode analysis  | 60        |
|          | 2.5.3 Odd-mode analysis   | 63        |
|          | References  | 70        |
| <b>3</b> | <b>Delay-induced negative group delay</b>   | <b>73</b> |
|          | <i>Henning U. Voss</i>  |           |
|          | Abstract  | 73        |
|          | Keywords  | 73        |
|          | 3.1 Introduction  | 73        |
|          | 3.2 The DINGD predictor   | 74        |
|          | 3.2.1 Continuous-time signal prediction with DINGD                                  | 74        |
|          | 3.2.2 Discrete-time time signal prediction with DINGD                               | 80        |
|          | 3.2.3 The simplest DINGD predictor  | 81        |
|          | 3.2.4 Application examples  | 83        |
|          | 3.2.5 Cascading   | 83        |
|          | 3.2.6 Multiple delays   | 87        |
|          | 3.3 Prediction of manual cursor movement  | 95        |
|          | 3.3.1 Description of the algorithm  | 95        |
|          | 3.4 Discussion  | 100       |
|          | 3.4.1 Prediction by NGD versus conventional prediction                              | 100       |
|          | 3.4.2 Causality   | 101       |
|          | 3.4.3 Anticipatory coupling   | 101       |
|          | 3.4.4 Biology and engineering   | 102       |
|          | 3.5 Conclusion  | 103       |

|  |            |
