<b>About the authors</b>	<b>xi</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Data infrastructure and strategy for smart cities	4
<b>Part I Smart cities and data infrastructures</b>	
<b>2 The evolution of urban intelligence</b>	<b>11</b>
2.1 Context	11
2.1.1 Knowledge and technology innovation in cities	13
2.2 The evolution of urban intelligence	14
2.2.1 The digital revolution	16
2.3 Digital cities	19
2.3.1 Capabilities development in digital cities	22
2.3.2 Structural analysis of digital cities	22
2.4 Ubiquitous cities	23
2.4.1 Capabilities development in ubiquitous cities	25
2.4.2 Structural analysis of ubiquitous cities	26
2.5 Intelligent cities	26
2.5.1 Capabilities development in intelligent cities	29
2.5.2 Differentiation factors of intelligent cities	30
<b>3 Smart cities</b>	<b>31</b>
3.1 The physical-digital integration of smart cities	34
3.1.1 The Internet of Things	37
3.1.2 The city data	41
3.2 The two categories of smart cities' applications	42
3.2.1 Closed-system approaches	42
3.2.2 Open-systems approach	44
3.3 Sources of barriers in city data management	47
<b>4 The management of city data</b>	<b>53</b>
4.1 Current trends in smart cities data management	53
4.2 A short introduction to platforms	56
4.2.1 Network effects	59

4.2.2	Platform actors and relationships	60
4.2.3	Platform leadership and governance	61
4.3	The two prevailing approaches in the provision of city data	63
4.3.1	Towards a data infrastructure	65
<b>Part II The link between data infrastructures and business strategies</b>		
<b>5</b>	<b>Services innovation and business models</b>	<b>69</b>
5.1	Context	69
5.2	An introduction to business models	70
5.2.1	e-Business models	72
5.3	The framework for data infrastructure design	77
5.3.1	Step 1: Business models outline	79
5.3.2	Step 2: Evaluation with CSFs	82
5.3.3	Step 3: Specification of CDIs	82
5.3.4	Step 4: Closed-loop value-chain model	83
5.3.5	Step 5: Robustness check	83
<b>6</b>	<b>The business models framework</b>	<b>85</b>
6.1	Introduction	85
6.2	Service design	89
6.2.1	Comparative advantage of the service innovation	93
6.2.2	Service's neutrality, fairness and accountability	94
6.2.3	Formulating a service strategy	96
6.3	Technology design	98
6.3.1	The 9 v's of city data	103
6.3.2	Formulating a technology strategy	109
6.4	Value network design	111
6.4.1	Data-driven value network	112
6.4.2	Formulating a value network strategy	117
6.5	Value design	118
6.5.1	Formulating a value strategy	122
6.6	Governance design	123
6.6.1	Formulating a governance strategy	126
<b>7</b>	<b>The reference architecture framework</b>	<b>129</b>
7.1	The logistical distribution of city data	129
7.2	The forward logistics of city data	133
7.3	Support activities	135
7.4	Reverse logistics of city data	136
7.5	Inside-out and outside-in linkages	138
7.6	Data infrastructure reference architecture	141
7.7	Summary	143

**Part III Applied data infrastructures design**

<b>8 Introduction</b>	<b>147</b>
8.1 Case studies description	147
8.2 Designing an Open Data Infrastructure	149
8.2.1 Business models outline	149
8.2.2 Service design requirements	156
8.2.3 Technology design requirements	159
8.2.4 Value design requirements	164
8.2.5 Governance design requirements	165
8.2.6 Reference architecture model	166
8.3 Taking smart cities forward	169
8.3.1 London Data Infrastructure	169
8.3.2 Dynamic business models analysis	169
8.3.3 Business models outline	173
8.3.4 Service domain requirements	180
8.3.5 Technology design requirements	185
8.3.6 Value network design requirements	191
8.3.7 Value design requirements	193
8.3.8 Governance domain requirements	195
8.3.9 Reference architecture model	196

**Part IV Assessment and evolution of data infrastructure design**

<b>9 The dynamics and evolution of business models</b>	<b>205</b>
9.1 External forces	206
9.2 Business models evaluation and refinement	207
9.3 Critical design issues	208
9.3.1 Service design	209
9.3.2 Technology design	211
9.3.3 Value network	214
9.3.4 Value design	215
9.3.5 Governance design	216
9.4 Critical success factors	218
9.4.1 Providing support to human capability	220
9.4.2 Providing support to social capability	222
9.4.3 Providing support to innovation capability	223
9.4.4 Providing support to institutional capability	225
9.4.5 Providing support to physical capability	227
9.4.6 Providing support to sustainable and economic capability	229
9.5 Summary	230

<b>10 Applied data infrastructures assessment</b>	<b>235</b>
10.1 Open data infrastructure case study	235
10.1.1 Evaluation with CDIs	235
10.1.2 Evaluation with CSFs	235
10.1.3 Robustness check	237
10.2 London Data Infrastructure case study	241
10.2.1 Evaluation with CDIs	241
10.2.2 Evaluation with CSFs	245
10.3 Complementary tools and techniques	251
10.3.1 Volumetric analysis of city data	251
10.3.2 Simulation of CDIs	261
<b>11 Conclusion</b>	<b>265</b>
<b>References</b>	<b>267</b>
