List of table xi
Preface xii
Acknowledgments xiv

1 Introduction 1
1.1 Motivation of reset control 1
1.2 Basic concepts of RCSs 10
1.2.1 Preliminaries and problem setup 10
1.2.2 Solutions to RCSs 13
1.2.3 RCSs with discrete-time reset conditions 15
1.3 Fundamental theory of traditional reset design 17
1.3.1 Horowitz's design 17
1.3.2 PI+CI reset design 22
Notes 24
References 24

2 Describing function analysis of reset systems 27
2.1 Sinusoid input response 27
2.2 Describing function 32
2.2.1 General case 32
2.2.2 Gain-balanced FORE 38
2.3 Application to HDD systems 41
2.3.1 Reset narrow band compensator (RNBC) 41
2.3.2 Mid-frequency disturbance compensation 43
2.3.3 Simulation results 46
Notes 48
References 48

3 Stability of reset control systems 51
3.1 Preliminaries 51
3.1.1 Annihilator of matrices 51
3.1.2 Passive systems 52
3.2 Quadratic stability 57
3.3 Stability of RCSs with time-delay 63

3.4 Reset times-dependent stability 67
3.5 Passivity of RCSs 77
Notes 81
References 82

4 Robust stability of reset control systems 83
4.1 Definitions and assumptions 83
4.2 Quadratic stability 86
4.2.1 RCSs with low-dimensional plants ($n_p \leq 2$) 87
4.2.2 High-dimensional cases 89
4.3 Affine quadratic stability 93
4.4 Robust stability of RCS with time-delay 96
4.5 Examples 106
Notes 112
References 112

5 RCSs with discrete-time reset conditions 115
5.1 Preliminaries and problem setting 116
5.2 Stability analysis 118
5.3 A heuristic design method 122
5.4 Application to track-seeking control of HDD systems 125
5.4.1 System description 125
5.4.2 Baseline controller design 126
5.4.3 Reset mode 127
5.4.4 Stability analysis 127
5.4.5 Simulation results 128
Notes 130
References 130

6 Reset control systems with fixed reset instants 133
6.1 Stability analysis 133
6.1.1 Stability analysis through induced discrete systems 133
6.1.2 Lie-algebraic condition 135
6.2 Moving horizon optimization 137
6.2.1 Trade-off between stability and other performances 140
6.2.2 Observer-based reset control 141
6.3 Optimal reset law design 142
6.3.1 Equivalence between ORL and LQR 144
6.3.2 Solutions to ORL problems 147
6.4 Application to HDD systems 149
6.4.1 Dynamics model of HDD systems 149
6.4.2 Moving horizon optimal reset control 150
6.4.3 Optimal reset control 153
6.5 Application to PZT-positioning stage 160
6.5.1 Modeling of the PZT-positioning stage 160

6.5.2 Reset control design 161
6.5.3 Experimental results 162
Notes 166
References 167

7 Reset control systems with conic jump sets 169
7.1 Basic idea 169
7.2 L_2-gain analysis 172
7.2.1 Passification via reset 174
7.2.2 Finite $\mathcal{L}_2$ gain stability 178
Notes 180
References 180
