Preface	xiii
Section 1 Review and overall requirements	1
1 Lower-limb wearable robotics	5
<i>Thomas G. Sugar, David Armstrong, Bijan Najafi, Sangram Redkar and Jeffrey A. Ward</i>	
Abstract	5
1.1 Background	5
1.2 Definition of wearable robotic system	6
1.3 Promise and potential of wearable robotic systems	7
1.4 Challenges	7
1.5 Lower limb wearable systems	9
1.6 Lower limb orthoses	9
1.7 Lower limb prostheses	9
1.8 Lower limb exoskeletons	11
1.9 Legged rehabilitation	13
1.10 Future vision	16
References	16
2 Review of exoskeletons for medical and service applications: ongoing Research in Europe on Wearable Robots, with focus on lower extremity exoskeletons	25
<i>Jan F. Veneman, Dirk Lefeber and Nicola Vitiello</i>	
Abstract	25
2.1 Introduction	25
2.1.1 What are wearable robots and lower extremity exoskeletons?	25
2.1.2 European research funding structure	26
2.2 Review of recent wearable robot and exoskeleton-related research projects inside Europe	27
2.2.1 General directions	27
Acknowledgement	50
References	50

3	Soft wearable robots	51
	<i>Conor J. Walsh</i>	
	Abstract	51
	3.1 Introduction	51
	3.2 Soft wearable robots to assist locomotion	52
	3.3 Soft wearable robots to assist the upper extremity	56
	3.4 Soft wearable robots for implantable applications	58
	3.5 Emerging directions in soft wearable robots	59
	References	60
4	Exploring user requirements for a lower body soft exoskeleton to assist mobility	67
	<i>Valerie Power, Adam de Eyto, Christoph Bauer, Corien Nikamp, Samuel Schülein, Jeanette Müller, Jesús Ortiz and Leonard O’Sullivan</i>	
	Abstract	67
	4.1 Introduction	67
	4.2 User-centred design	68
	4.3 XoSoft: a soft lower body exoskeleton to assist mobility	69
	4.4 Identifying users of a soft exoskeleton to assist mobility	71
	4.4.1 Primary users	71
	4.4.2 Secondary users	74
	4.4.3 Tertiary users	75
	4.5 A mixed methods study to explore users’ design requirements	76
	4.5.1 Methods	78
	4.5.2 Results	81
	4.6 User needs: implications for soft exoskeleton design	85
	4.6.1 Functional requirements	85
	4.6.2 Design and aesthetics	86
	4.6.3 Willingness to use the concept	86
	4.6.4 Alternative assistive devices	87
	4.6.5 Current challenges for soft exoskeleton technologies	87
	4.7 Chapter summary	90
	References	90
	Section 2 Design and control of exoskeletons	97
	References	98
5	Design and control of spherical shoulder exoskeletons for assistive applications	99
	<i>Shaoping Bai, Simon Christensen and Muhammad Raza Ul Islam</i>	
	Abstract	99
	5.1 Introduction	99
	5.2 State-of-the-art in shoulder exoskeletons	100

5.3	Kinematics of spherical shoulder exoskeleton	101
5.3.1	Planar kinematics of the DPL	102
5.3.2	Kinematics of the shoulder mechanism	104
5.4	Shoulder mechanism design	105
5.5	Control strategies of exoskeleton shoulders	106
5.5.1	State-of-the-art exoskeleton control	106
5.5.2	Control algorithms	107
5.5.3	Trajectory-based control	108
5.5.4	Interaction-based control	109
5.6	Control of the shoulder mechanism	111
5.6.1	System description	111
5.7	Shoulder joint usability test	112
5.8	Conclusions	115
	References	115
6	Calibration platform for wearable 3D motion sensors	119
	<i>Bingfei Fan, Qingguo Li, Chao Wang and Tao Liu</i>	
	Abstract	119
6.1	Introduction	119
6.2	Design of instrumented gimbal	121
6.2.1	The mechanical structure of the instrumented gimbal	121
6.2.2	The controller of the designed gimbal	123
6.2.3	The method for eliminating the magnetic disturbances	124
6.2.4	Calibration of the gimbal	124
6.3	Orientation evaluation with instrumented gimbal	126
6.3.1	Orientation error analysis using the instrumented gimbal	126
6.3.2	Selected wearable motion sensor	130
6.3.3	Sensor configuration	130
6.3.4	Hard-iron calibration for magnetometer	131
6.3.5	Coordinate frame alignment (CFA) for WMS before experiments	132
6.4	Experimental method	132
6.4.1	Static accuracy test	132
6.4.2	Dynamic accuracy test	133
6.5	Results and discussion	133
6.5.1	Static accuracy	133
6.5.2	Dynamic accuracy	133
6.5.3	The effect of magnetic disturbances	136
6.6	Conclusion	139
	Acknowledgment	139
	References	139

7	Control and performance of upper- and lower extremity SEA-based exoskeletons	143
	<i>Crea Simona, Parri Andrea, Trigili Emilio, Baldoni Andrea, Muscolo Marco, Fantozzi Matteo, Moisè Matteo, Cortese Mario, Giovacchini Francesco, Carrozza Maria Chiara, and Vitiello Nicola</i>	
	Abstract	143
7.1	Compliant actuators with series elasticity for wearable robots	144
7.2	NEUROExos elbow module	147
	7.2.1 SEA architecture: mechanics and control	148
	7.2.2 High-level control	150
7.3	NEUROExos shoulder–elbow module	150
	7.3.1 SEA architecture: mechanics and control	152
	7.3.2 High-level control	154
7.4	Active pelvis orthosis	154
	7.4.1 SEA architecture: mechanics and control	155
	7.4.2 High-level control	157
7.5	Performance, strengths, and challenges of SEAs in wearable robotics	157
	References	161
8	Gait-event-based synchronization and control of a compact portable knee–ankle–foot exoskeleton robot for gait rehabilitation	165
	<i>Zhao Guo, Gong Chen and Haoyong Yu</i>	
	Abstract	165
8.1	Introduction	165
8.2	Mechanical design of the knee–ankle–foot robot	168
	8.2.1 Design specifications	168
	8.2.2 Mechanical structure design of the robot	169
	8.2.3 Compliant actuator design	170
8.3	Human–robot synchronization control	171
	8.3.1 Gait pattern of human walking	171
	8.3.2 Gait events detection using HMM	172
	8.3.3 Adaptive oscillator	174
	8.3.4 Assistive control of the robot	177
8.4	Experimental protocol	178
	8.4.1 Experimental setup	178
	8.4.2 Experimental protocol	179
	8.4.3 Data analysis	180
8.5	Experimental results	180
	8.5.1 Evaluation of synchronization	180
	8.5.2 Efficiency of the adaptive oscillator	184
	8.5.3 Evidence of assistance	184
8.6	Conclusion	187
	References	187

Section 3 Devices	191
9 Real-time gait planning for a lower limb exoskeleton robot	193
<i>Xinyu Wu, Can Wang, Yue Ma and Duxin Liu</i>	
Abstract	193
9.1 Introduction	193
9.2 SIAT lower limb exoskeleton robot	194
9.2.1 System and structure	194
9.2.2 Kinematics modeling	197
9.3 Crutches-walking gait analysis	199
9.4 Real-time gait planning	200
9.4.1 Gait planning strategy	202
9.4.2 Joint servo system	206
9.4.3 Control software	209
9.5 Experiments and discussion	211
9.6 Conclusions	215
References	216
10 Soft wearable assistive robotics: exosuits and supernumerary limbs	219
<i>Lorenzo Masia, Irfan Hussain, Michele Xiloyannis, Claudio Pacchierotti, Leonardo Cappello, Monica Malvezzi, Giovanni Spagnoletti, Chris Wilson Antuvan, Dinh Binh Khanh, Maria Pozzi, and Domenico Prattichizzo</i>	
Abstract	219
10.1 Introduction	219
10.2 Exosuits	222
10.2.1 Design and actuation	223
10.2.2 Control	226
10.2.3 Evaluation	232
10.2.4 Discussion	236
10.3 Supernumerary limbs	237
10.3.1 Design and actuation	238
10.3.2 Control	240
10.3.3 The hRing	241
10.3.4 The frontalis muscle cap	243
10.3.5 Evaluation	244
10.3.6 Performance evaluation	244
10.3.7 Tests with chronic stroke patients	246
10.3.8 Discussion	246
Acknowledgments	247
References	248

11 Walking assistive apparatus for gait training patients and promotion exercise of the elderly	255
<i>Eiichiro Tanaka, Keiichi Muramatsu, Keiichi Watanuki, Shozo Saegusa and Louis Yuge</i>	
Abstract	255
11.1 Introduction	255
11.2 Whole leg assisting type of walking assistive apparatus	257
11.3 Whole body motion support type mobile suit	265
11.4 Close-fitting type of walking assistive apparatus	273
11.5 Walking support robot “RE-Gait [®] ” and “RE-Gait [®] Light”	279
11.6 Control method of two-dimensional emotion map and future work	285
11.7 Conclusions	287
References	287
Section 4 Commercialization issues	291
12 Regulatory issues for exoskeletons	293
<i>Koen Chielens, Burkhard Zimmerman and Gurvinder S. Virk</i>	
Abstract	293
12.1 Introduction	293
12.1.1 Exoskeletons: medical–non-medical applications	295
12.1.2 Machinery exoskeletons	296
12.1.3 Medical exoskeletons	297
12.2 Legislation applicable for wearable exoskeletons (medical/non-medical)	300
12.2.1 In Europe	300
12.2.2 In other parts of the world	302
12.3 The European directives: application on exoskeletons (non-medical)	302
12.3.1 The Machinery Directive (2006/42/E)	302
12.3.2 The Low Voltage Directive (2014/35/EU)	311
12.3.3 The EMC Directive (2014/30/EU)	313
12.4 Regulation for medical exoskeletons	315
12.4.1 Standards for medical devices	315
12.4.2 IEC 60601 standards series	317
12.4.3 Quality management system standards	320
12.4.4 Programmable electrical medical systems	320
12.4.5 Biocompatibility	321
12.4.6 Usability engineering	321
12.4.7 Recurrent test and test after repair	323
12.4.8 Home healthcare environment	323
12.5 New and future standards for medical electrical devices	323
12.6 Safety aspects for medical electrical devices	324
12.6.1 Safety aspects of wearable medical electrical devices	329

12.7	Conclusions	332
	References	333
13	Test methods for exoskeletons—lessons learned from industrial and response robotics	335
	<i>Roger Bostelman and Tsai Hong</i>	
	Abstract	335
13.1	Introduction	335
13.2	Exoskeleton performance metrics	337
13.3	Standards	339
	13.3.1 Safety standards	339
	13.3.2 Crossindustry performance standards	341
13.4	Crossindustry measurements applicable to exoskeletons	343
	13.4.1 Joint rotation axis location	343
	13.4.2 Industrial mobile manipulator	350
	13.4.3 Response robots	351
13.5	Recommended test methods for exoskeletons	352
	13.5.1 Load handling	353
13.6	Summary and conclusions	357
