<b>Preface</b>	<b>xi</b>
<b>Acknowledgments</b>	<b>xv</b>
<b>List of acronyms</b>	<b>xvii</b>
<b>Long author biographies</b>	<b>xix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Statement of the problem	1
1.2 Literature review	3
1.2.1 Fault diagnosis	3
1.2.2 Integrated fault detection and control	8
1.2.3 Multiagent systems	10
1.2.4 Cooperative control and consensus control concepts and notions	13
1.2.5 Applications	14
1.2.6 Cooperative control	15
1.2.7 Formation control	17
1.2.8 Flocking/swarming-based approaches	22
1.2.9 Consensus algorithms	23
1.3 Features and objectives of the book	27
1.4 Outline of the book	29
1.5 Notations and preliminary lemmas	30
<b>2 Integrated fault detection and control design based on dynamic observer</b>	<b>35</b>
2.1 Introduction	35
2.2 The problem statement and definitions	36
2.2.1 System model	36
2.2.2 Problem formulation	39
2.3 Integrated fault detection and control problem	40
2.3.1 Residual evaluation criterion	47
2.4 Case studies	47
2.4.1 Case study 1 (four-tank process)	47
2.4.2 Case study 2 [autonomous underwater vehicle (AUV)]	50
2.5 Conclusion	63

<b>3</b>	<b>A single dynamic observer-based module for design of integrated fault detection, isolation, and tracking control scheme</b>	<b>65</b>
3.1	Introduction	66
3.2	System description and problem formulation	67
3.2.1	System description	67
3.2.2	Problem formulation	69
3.3	Main results	71
3.3.1	Residual evaluation criterion	79
3.4	A case study: an autonomous underwater vehicle	79
3.5	Conclusion	86
<b>4</b>	<b>Integrated design of fault detection, isolation, and control for continuous-time Markovian jump systems</b>	<b>87</b>
4.1	Introduction	87
4.2	System description and problem formulation	90
4.2.1	System description	90
4.2.2	The IFDIC design problem formulation	92
4.3	Main results	93
4.4	Case study	100
4.5	Conclusion	109
<b>5</b>	<b>Event-triggered multiobjective control and fault diagnosis: a unified framework</b>	<b>111</b>
5.1	Introduction	112
5.1.1	Literature review on event-triggered control	112
5.1.2	Literature review on event-triggered fault diagnosis	113
5.1.3	Our contributions	113
5.2	System description and problem formulation	114
5.2.1	System description	114
5.2.2	E-IFDIC module and event detector description	115
5.2.3	Problem formulation	117
5.3	Main results	119
5.4	Two industrial case studies	126
5.5	Conclusion	140
<b>6</b>	<b>Event-triggered fault estimation and accommodation design for linear systems</b>	<b>141</b>
6.1	Introduction	141
6.2	Problem statement	142
6.2.1	System description	143
6.2.2	Problem definition	143
6.2.3	Problem formulation	145
6.3	Main results	146
6.4	Case study	152
6.5	Conclusion	158

<b>7 Integrated fault detection and consensus control design for a network of multiagent systems</b>	<b>159</b>
7.1 Introduction	159
7.2 System description and problem statement	163
7.2.1 Multiagent team representation	163
7.2.2 Design of the detector/controller units	164
7.2.3 Closed-loop team dynamics	165
7.2.4 The distributed IFDCC problem definition	166
7.3 Distributed IFDCC decomposition	167
7.3.1 Model transformation	167
7.3.2 Model decomposition	169
7.4 LMI formulation and design for the IFDCC problem	171
7.4.1 Residual evaluation criterion	174
7.4.2 Distributed fault isolation	175
7.5 Case study	175
7.5.1 Case study 1 (corresponding to Requirement 1)	175
7.5.2 Case study 2 (corresponding to Requirement 2)	180
7.6 Conclusion	182
<b>8 Perspectives and future directions of research</b>	<b>183</b>
8.1 Future research directions	183
8.1.1 A single dynamic observer-based module for design of integrated fault detection, isolation, and tracking control scheme	184
8.1.2 Integrated design of fault detection, isolation, and control for continuous-time Markovian jump systems	185
8.1.3 Event-triggered multiobjective control and fault diagnosis: a unified framework	185
8.1.4 Event-triggered fault estimation and accommodation design for linear systems	186
8.1.5 Integrated fault detection and consensus control design for a network of multiagent systems	186
8.1.6 General future directions of research	187
