Acknowledgements	ix
Preface	xi
List of Symbols	xiii
Abbreviations	xix
1 Introduction	1
1.1 Brief history of artificial hands	2
1.2 Myoelectrically controlled hands	7
1.3 Components	10
1.4 Mechanisms and actuators	14
1.5 Power sources	17
1.6 Prosthetic socket	17
1.7 Signals	18
1.8 Expectation	18
1.9 Prototype hands developed at the University of Southampton	18
1.10 Sources of information	23
1.11 Summary	23
References	23
Bibliography	25
2 Mechanisms	27
2.1 Materials	27
2.2 Simple clamps	29
2.3 Natural curling fingers	31
2.4 Curling fingers and pulleys	32
2.5 Curling fingers and one four-bar linkage	36
2.6 Curling fingers and two four-bar linkages	49
2.7 Thumb	52
2.8 Actuators	52
2.9 Summary	57
References	57
3 Sensors	59
3.1 Characteristics	59
3.2 Forces sensors	61
3.2.1 Strain gauge	61
3.2.2 Force-sensitive resistors	68

3.2.3	Optical	69
3.2.4	Capacitance	70
3.2.5	Hall effect	73
3.2.6	Quantum tunnelling composite	74
3.3	Slip and texture sensors	75
3.3.1	Piezoelectric	75
3.3.2	Roller ball using a wheel to detect slip	93
3.3.3	Acoustic	93
3.3.4	Arrays of force sensors	93
3.3.5	Accelerometer	94
3.4	Position (angle)	97
3.4.1	Rotary potentiometer	97
3.4.2	Hall effect	99
3.4.3	Optics	99
3.5	Summary	99
	References	100
4	Control	103
4.1	Finger position	103
4.2	Object slip	109
4.3	Reference inputs	117
4.4	Artificial prehension	129
4.5	Summary	136
	References	136
5	Hand assessment	137
5.1	Introduction	137
5.1.1	How can the function of a hand design be assessed?	137
5.2	The Southampton Hand Assessment Procedure	138
5.2.1	Prehensile patterns	140
5.3	Procedure	143
5.4	Calculations	143
5.5	Manufacture	145
5.6	Standardisation	146
5.7	Reliability and validity	147
5.8	Physical process	147
5.9	Small SHAP	152
5.10	Summary	156
	References	156
6	Future directions	159
	References	160
	Index	163
