Cyber-physical systems – List of acronyms	xiii
Preface	xvii
1 Wireless sensor networks: basics and fundamentals	1
Abstract	1
1.1 Introduction	1
1.2 Wireless ad-hoc networks	2
1.2.1 Wireless sensor networks	4
1.2.2 Mobile ad-hoc networks	5
1.2.3 Vehicular ad-hoc networks	6
1.3 Wireless nanosensor networks (WNSNs)	7
1.3.1 Nano-communication mechanisms	8
1.3.2 Applications	10
1.4 WNSN for embedded system design	14
1.5 Summary and discussion	15
References	17
2 Cyber-physical systems: basics and fundamentals	21
Abstract	21
2.1 Introduction	21
2.1.1 Cyber-physical system (CPS)	24
2.2 CPS concept and requirements	26
2.3 CPS architectures	28
2.4 CPS applications	33
2.4.1 CPS for vehicular environments	33
2.4.2 CPS for agriculture	34
2.4.3 CPS for health and medical sciences	36
2.4.4 CPS for smart grid	39
2.4.5 Overview	41
2.5 Future aspects of CPS	41
2.6 Conclusion	43
References	43
3 Integrating wireless sensor networks and cyber-physical systems: challenges and opportunities	47
Abstract	47
3.1 Introduction	48
3.1.1 Chapter overview	48

3.2	Wireless sensor networks	49
3.3	Cyber-physical systems	52
3.4	WSN-CPS architecture	53
3.5	Characteristics and challenges of WSN-CPS	55
3.5.1	CPS challenges	55
3.5.2	WSN-CPS challenges and characteristics	58
3.6	Opportunities	67
3.7	Conclusion	69
	Acknowledgments	70
	References	70
4	Enabling cyber-physical systems architectural design with wireless sensor network technologies	77
	Abstract	77
4.1	Introduction	77
4.2	Distinguishing WSN, MANET, M2M, and CPS	78
4.3	Cyber-physical system design challenges	79
4.4	Cyber-physical systems architecture	83
4.4.1	Introduction	83
4.4.2	Healthcare applications	86
4.4.3	Smart space applications	87
4.4.4	Emergency and real-time applications	89
4.4.5	Control applications	90
4.4.6	Environmental applications	91
4.4.7	Intelligent transportation applications	92
4.4.8	Summary	93
4.5	The role of WSN technologies in CPSs	96
4.6	Towards a new CPS architecture	97
4.7	Conclusion	99
	References	101
5	Cyber security in cyber-physical systems: on false data injection attacks in the smart grid	105
	Abstract	105
5.1	Introduction	105
5.2	CPSs and wireless sensor networks	107
5.3	Cyber threats in CPS	108
5.4	Case study: False data injection attacks in smart grid	110
5.4.1	An overview of the smart grid	110
5.4.2	Impact of false data injection attacks on electricity market operations	112
5.4.3	Performance evaluation	118
5.4.4	Impact of false data injection attacks on other applications	120
5.5	Discussion	122
5.5.1	Prevention	122
5.5.2	Detection	123

5.6 Conclusion	123
Acknowledgments	123
References	124
6 Data management in cyber-physical systems with wireless sensor networks	127
Abstract	127
6.1 Introduction	127
6.2 Data management: WSN vs. WSN-CPS	129
6.2.1 Data management in WSNs	129
6.2.2 Constraints of data management in WSNs	130
6.2.3 WSN-CPSs compared to WSNs	131
6.3 Data management activities	133
6.3.1 Mobile data collection	134
6.3.2 Data processing	136
6.3.3 Data storage	137
6.3.4 Data querying	138
6.3.5 Data compression	139
6.3.6 Data analysis	139
6.4 Cyber-physical cloud computing: opportunities and challenges	139
6.4.1 Real time	141
6.4.2 Big Data	141
6.4.3 Data mining	141
6.4.4 Data integration	142
6.4.5 Load balancing	142
6.5 Conclusion	142
References	142
7 Routing in wireless sensor networks for cyber-physical systems	149
Abstract	149
7.1 Introduction	149
7.2 Design challenges and issues for routing in WSN within the context of CPS	153
7.3 Routing protocols in WSNs for CPSs	155
7.3.1 Taxonomy of routing protocols in WSNs for CPSs	155
7.3.2 Location-based routing protocols	156
7.3.3 Data-centric routing protocols	159
7.3.4 Hierarchical routing protocols	163
7.3.5 Summary of routing protocols in WSN for CPS	167
7.4 Future directions of routing protocols in WSN for CPS	167
7.5 Conclusion	171
7.6 Acknowledgments	171
7.7 Appendix: List of Acronyms	171
References	172

8	Resource management in cyber-physical systems	177
	Abstract	177
8.1	Introduction	178
8.2	Resource allocation	179
8.3	Game theory	181
8.4	Cooperative relaying	183
8.5	Recent results	185
	8.5.1 Fairness versus efficiency	185
	8.5.2 Unifying framework for multi-resource allocation	187
	8.5.3 Advanced resource allocation in wireless sensor networks	187
8.6	Future directions	189
	Reference	190
9	Mobile sensors in wireless sensor network cyber-physical systems	197
	Abstract	197
9.1	Introduction	197
9.2	Mobile WSN-CPS Applications	201
	9.2.1 Smart transportation CPS	201
	9.2.2 Smart medical CPS	204
	9.2.3 Smart social CPS	207
9.3	Challenges and opportunities	210
9.4	Conclusions	212
9.5	Acknowledgments	213
	References	213
10	Intelligent wireless sensor networks (iWSNs) in cyber-physical systems	219
	Abstract	219
10.1	Intelligent systems	219
10.2	Wireless sensor networks	222
10.3	Deployment of WSN in cyber-physical systems	222
10.4	Intelligent wireless sensor networks	224
10.5	WSN versus iWSN	228
10.6	Example applications with distinct intelligence level	229
	10.6.1 Smart grid	229
	10.6.2 Smart field monitoring	231
	10.6.3 Applications need variant smartness	232
10.7	Summary	234
	References	234
11	Resilient wireless sensor networks for cyber-physical systems	239
	Abstract	239
11.1	Introduction	239
	11.1.1 Cyber-physical systems and sensor networks	240
	11.1.2 Information-security goals and cyber-physical systems	242

11.2	Objectives of WSN for CPS	243
11.2.1	Main objectives	243
11.2.2	Examples	245
11.3	Attacks against sensors	246
11.3.1	Types of attacks	246
11.3.2	Examples of attacks and vulnerabilities in CPS	249
11.4	Notion of attack resilience	251
11.4.1	Security and resilience	251
11.4.2	Random failures and intentional attacks	252
11.4.3	Challenges	254
11.5	Attack-resilient design	256
11.5.1	Approaches for attack resilience	256
11.5.2	Examples	258
11.6	Conclusions and future directions	261
11.7	Acknowledgments	262
	References	262
12	Case studies of WSN-CPS applications	269
	Abstract	269
12.1	Introduction	270
12.2	Smart space systems	272
12.2.1	Fixture monitoring systems	272
12.2.2	Energy-efficient smart buildings	273
12.2.3	Preference-based smart home	275
12.3	Healthcare systems	276
12.3.1	Sensor-assisted sleep-facilitating systems	276
12.3.2	Body motion monitoring	277
12.4	Emergency response systems	279
12.4.1	Emergency evacuation systems	279
12.4.2	Search and rescue systems	280
12.5	Human activity inference	282
12.5.1	Conversation behavior analyzer	282
12.5.2	Mood detection	285
12.5.3	Road safety helpers	286
12.5.4	Social activity inference	286
12.5.5	Virtual-physical games	291
12.6	Smart city systems	293
12.6.1	Urban-scale monitoring	293
12.6.2	Urban mobility and activity diaries	295
12.6.3	Intelligent transportation systems	297
12.7	Conclusion: discussion, comparison, and future challenges	301
12.7.1	Discussion and comparison	301
12.7.2	Opportunities and challenges beyond	301
	References	304

13	Medical cyber-physical systems	311
	Abstract	311
13.1	Introduction	311
13.2	Background and related works	314
	13.2.1 Model-based developments	316
	13.2.2 Medical guidelines	317
	13.2.3 User-centred design	318
13.3	Technical components	319
	13.3.1 Real-time dialogue server	319
	13.3.2 Mobile sensor architecture for continuous monitoring and care	321
	13.3.3 Data mining suite	321
	13.3.4 Semantic model for clinical information and patients	322
13.4	Towards cognitive prostheses	324
13.5	Challenges and opportunities	325
	13.5.1 Clinical data intelligence models	325
	13.5.2 Semantic patient models and intelligent access	326
	13.5.3 Towards integrated decision support	327
13.6	Conclusion	328
13.7	Acknowledgments	328
	References	328
