Preface	xii
1 Introduction to semiconductor light sources and their biomedical applications	1
<i>Peter E. Andersen and Paul Michael Petersen</i>	
1.1 Brief history and semiconductor physics background	1
1.2 Direct and indirect bandgap semiconductors	2
1.3 Doping of semiconductors and p-n junctions	4
1.4 Laser diodes and light-emitting diodes	6
1.5 Motivation for semiconductor sources in biomedical optics	8
1.6 Organization of this book	9
References	11
2 Fundamentals on modeling of edge-emitting semiconductor lasers and superluminescent light-emitting diodes	15
<i>Mariangela Gioannini, Paolo Bardella and Ivo Montrosset</i>	
2.1 Introduction	15
2.2 Electro-optical characteristics of the semiconductor active material	15
2.2.1 Optical gain and spontaneous emission	16
2.2.2 Carrier recombination and carrier life-time	18
2.3 Optical waveguides	20
2.3.1 Transverse optical mode calculation	20
2.3.2 The relevant parameters of the modal field	22
2.4 Carrier-photon interaction	24
2.4.1 A general overview	24
2.4.2 The case of laser cavity with BH waveguide	26
2.4.3 The case of laser cavity with ridge waveguide	28
2.4.4 Inclusion of the carrier transport	29
2.4.5 Inclusion of the longitudinal and spectral distribution of photons	31
2.4.6 The time domain TW model	35
2.5 Device layout	38
2.6 An example of device modeling: SLDs	43
2.6.1 Wide optical bandwidth	43
2.6.2 Ultralow reflectivity terminations	44
2.6.3 SLD layout	46
References	47

3 Q-switched and mode-locked lasers for biophotonic applications	57
<i>Edik U. Rafailov and Eugene A. Avrutin</i>	
3.1 Introduction	57
3.1.1 Ultrashort-pulse lasers	57
3.1.2 Progress in the use of diode lasers in biophotonics	58
3.2 Ultrashort pulse generation in semiconductor lasers: the main techniques and principles	60
3.2.1 Gain-switching and Q-switching	60
3.2.2 ML techniques in semiconductor lasers: the general principles	63
3.2.3 Saturable absorber properties and their effect on passive ML	67
3.3 State-of-the-art ML: QW lasers	71
3.4 Monolithic ML QD lasers	73
3.5 Short-pulse semiconductor lasers in a master oscillator-power amplifier configuration	93
3.6 New mode-locking regimes in and for biophotonic applications	96
3.7 Conclusions	100
References	101
4 Light-emitting diode technologies	117
<i>Hoi Wai Choi</i>	
4.1 Introduction	117
4.2 Light extraction	119
4.2.1 Chip shaping	121
4.3 Device functionalities	125
4.3.1 Micro-LEDs	125
4.3.2 Fiber-coupling	133
4.4 Conclusions	138
References	138
5 GaN-based blue vertical-cavity surface-emitting lasers	143
<i>Yu-Pin Lan, Ying-Yu Lai, Yung-Chi Wu, Tien-Chang Lu, Hao-Chung Kuo, and Shing-Chung Wang</i>	
5.1 Introduction	143
5.1.1 Wide-bandgap III-N materials	143
5.1.2 Nitride-based VCSELs	144
5.2 Distributed Bragg reflectors	146
5.2.1 Nitride-based DBRs	148
5.2.2 Dielectric DBRs	153

5.3	GaN-based VCSELs	155
5.3.1	Fully epitaxial nitride-based VCSEL	155
5.3.2	Hybrid nitride-based VCSEL	156
5.3.3	Dielectric DBR nitride-based VCSEL	161
5.4	Recent progress and future perspectives	166
	References	168
6	Quantum cascade lasers	173
	<i>Manijeh Razeghi</i>	
6.1	Introduction	173
6.2	Summary of quantum cascade laser development	175
6.3	QCL Basics	175
6.4	Rate equations and figures of merit	177
6.5	The QCL waveguide	179
6.6	Choosing a material system	180
6.7	Material growth and characterization	182
6.8	Laser fabrication	184
6.9	Development of high-efficiency lasers	185
6.10	Developing short-wavelength, high-power QCLs	187
6.11	Power scaling of quantum cascade lasers	190
6.12	Spectral and spatial filtering of quantum cascade lasers	191
6.13	Monolithic wavelength tuning with quantum cascade lasers	196
6.14	Room temperature THz emission based on difference frequency generation in mid-IR QCLs	197
6.15	Conclusion	205
	References	205
7	Diode laser systems based on nonlinear frequency conversion	209
	<i>Ole Bjarlin Jensen, Anders Kragh Hansen, Christian Pedersen, Peter E. Andersen, and Paul Michael Petersen</i>	
7.1	Nonlinear frequency conversion using second-order nonlinear optics	210
7.2	Methods for nonlinear frequency conversion	218
7.2.1	Single-pass frequency conversion	218
7.2.2	External cavity frequency conversion	220
7.2.3	Intracavity frequency conversion	226
7.3	Nonlinear frequency converted laser systems	227
7.3.1	Single-pass frequency conversion	227
7.3.2	External cavity frequency conversion	232
7.3.3	Intracavity frequency conversion	234
7.4	Outlook	236
	References	237

8 Semiconductor disk lasers	247
<i>Mircea Guina, Emmi Kantola, Tomi Leinonen, and Antti Rantamäki</i>	
8.1 Introduction	247
8.2 Technology overview	249
8.2.1 SDL operation and thermal management	249
8.2.2 Cavity architectures	254
8.2.3 Wavelength coverage	255
8.3 SDLs emitting yellow–orange–red radiation	256
8.3.1 Frequency-doubled yellow SDLs at 560–590 nm	256
8.3.2 Frequency-doubled orange–red SDLs at 590–635 nm	264
8.3.3 Directly emitting red SDLs at 630–750 nm	267
8.3.4 Frequency-doubled red SDLs at 630–800 nm	270
8.4 Biophotonics applications of SDLs	273
Acknowledgments	278
References	278
9 Potential biomedical use of diode-laser-induced luminescence from upconverting nanoparticles	291
<i>Monirehalsadat Mousavi and Stefan Andersson-Engels</i>	
9.1 Introduction	291
9.1.1 Present challenges in biomedical imaging	291
9.1.2 Motivation of interest for optical bioimaging	293
9.1.3 Genetically modified and exogenous molecular labelling	294
9.1.4 Motivation of interest for UCNPs for bioimaging	294
9.1.5 Use of diode lasers for upconversion nanoparticle-based bioimaging	295
9.1.6 Organisation of chapter	295
9.2 Optical properties of UCNPs	296
9.2.1 Upconversion process	296
9.2.2 Lanthanide-doped UCNPs	297
9.2.3 Synthetic methods of UCNPs	299
9.2.4 Surface modification	301
9.2.5 The core-shell concept	302
9.2.6 Quantum yield	303
9.3 Applications	306
9.3.1 Whole body small animal imaging	306
9.3.2 Tumour targeting imaging	306
9.3.3 Multimodal imaging	307
9.3.4 Bioassays	308
9.3.5 Photo-activation	310
9.3.6 Photodynamic therapy	311
9.4 Sources	315

9.5 Summary	317
Acknowledgement	318
References	318
10 Near-infrared spectroscopy systems for biomedical applications	331
<i>Shudong Jiang and Brian Pogue</i>	
10.1 Introduction	331
10.1.1 History of near-infrared spectroscopy and imaging in tissue	331
10.1.2 Basic principles	332
10.2 Imaging systems	334
10.2.1 Geometries: reflectance, transmission, and circular/lunate	334
10.2.2 Signal detection types	337
10.3 Light sources and detectors	339
10.3.1 Light source: laser diodes, LEDs, and other lasers	339
10.3.2 Photon detectors	339
10.4 Applications	341
10.4.1 Pulse oximeter	341
10.4.2 Breast cancer detection and treatment monitoring	342
10.4.3 Monitoring brain activities	347
References	349
11 Semiconductor lasers for bio-medical Raman spectroscopy	355
<i>Bavishna B. Praveen, Praveen C. Ashok, and Kishan Dholakia</i>	
11.1 Introduction	355
11.2 Raman spectroscopy	356
11.2.1 Raman spectroscopy for bio-medical applications	358
11.3 Laser sources for bio-medical Raman spectroscopy	360
11.4 Role of diode lasers in biomedical RS	362
11.4.1 Micro-Raman tweezers	364
11.4.2 Fiber Raman probes	367
11.4.3 Microfluidic Raman spectroscopy	368
11.4.4 Laser-based fluorescence suppression in Raman spectroscopy	369
11.5 Conclusion	372
Acknowledgment	373
References	373
12 Nonlinear imaging applications of high-power lasers: figures of merit	377
<i>Pablo Loza-Alvarez, David Artigas, and Rodrigo Aviles-Espinosa</i>	
12.1 Multiphoton nonlinear microscopy	378

12.1.1	One-photon excited fluorescence	378
12.1.2	Two-photon excited fluorescence	379
12.1.3	Other nonlinear effects used in microscopy	381
12.1.4	The multimodal laser scanning microscope workstation	383
12.1.5	Laser FOM in multiphoton microscopy	384
12.2	Ti:sapphire laser in microscopy	385
12.3	Yb-doped lasers in nonlinear microscopy	390
12.4	Compact novel lasers for TPEF and SHG	394
12.5	Lasers for THG	398
12.6	Conclusions	402
	Acknowledgments	404
	References	404
13	Optical coherence tomography	409
