| Preface | xxiii |
| Guide to book contents | xxv |
| Part I Introduction to speckle noise in ultrasound imaging and video | 1 |
| 1 A brief review of ultrasound imaging and video | 3 |
| <i>Alfred C. H. Yu</i> | |
| 1.1 Revisiting the notion of ultrasound | 4 |
| 1.2 Basics of ultrasound imaging: the pulse-echo sensing principle | 5 |
| 1.2.1 A-mode sensing (amplitude mode) | 5 |
| 1.2.2 M-mode mapping (motion mode) | 6 |
| 1.2.3 B-mode imaging (brightness mode) | 7 |
| 1.3 Imaging considerations: from frame rate to spatial resolution | 7 |
| 1.3.1 Minimum pulse repetition interval | 8 |
| 1.3.2 Frame rate | 9 |
| 1.3.3 Depth (or axial) resolution | 9 |
| 1.3.4 Lateral resolution | 10 |
| 1.3.5 Penetration depth | 11 |
| 1.4 Ultrasound imaging hardware | 12 |
| 1.4.1 Array transducers | 12 |
| 1.4.2 System electronics | 14 |
| 1.4.3 Scanner appearance | 14 |
| 1.4.4 Portable systems | 14 |
| 1.5 The Doppler mode | 15 |
| 1.5.1 Doppler spectrogram | 15 |
| 1.5.2 Color flow imaging | 16 |
| 1.5.3 Power Doppler imaging | 16 |
| 1.6 New trend toward high-frame-rate imaging | 17 |
| 1.6.1 Current progress in high-frame-rate imaging research | 18 |
| 1.6.2 Concurrent developments in new imaging hardware | 18 |
| 1.6.3 Recent advances in high-frame-rate cardiovascular ultrasound | 19 |
| 1.7 Conclusion | 19 |
| References | 19 |

| | |
|---|-----------|
| 2 Speckle physics | 25 |
| <i>Jovana Janjic and Gijs van Soest</i> | |
| 2.1 Introduction | 25 |
| 2.2 Speckle observations | 27 |
| 2.2.1 Speckle in optics | 27 |
| 2.2.2 Mapping optical speckle concepts to ultrasonic imaging | 28 |
| 2.3 Speckle as a 2D random walk | 30 |
| 2.3.1 First-order statistics | 31 |
| 2.3.2 Sums of speckle patterns | 36 |
| 2.3.3 Speckle pattern plus a nonrandom phasor | 38 |
| 2.3.4 Nonuniform phase distribution | 40 |
| 2.4 Speckle in ultrasonic imaging | 42 |
| 2.4.1 Random ultrasound scattering in 1D | 43 |
| 2.4.2 Second-order speckle statistics in ultrasound | 45 |
| 2.4.3 Partially developed speckle and speckle from few scatterers | 47 |
| 2.5 Effect of postprocessing on first- and second-order statistics | 50 |
| 2.6 Summary | 52 |
| Acknowledgments | 52 |
| References | 52 |
| 3 Statistical models for speckle noise and Bayesian deconvolution of ultrasound images | 55 |
| <i>Ningning Zhao, Adrian Basarab, Denis Kouamé, and Jean-Yves Tourneret</i> | |
| 3.1 Statistical analysis of speckle noise | 56 |
| 3.1.1 Statistical models for radio-frequency signals | 56 |
| 3.1.2 Statistical models for envelope signals | 58 |
| 3.1.3 Statistical models for B-mode image | 62 |
| 3.1.4 Brief review of statistical despeckling techniques | 62 |
| 3.2 Bayesian method for US image deconvolution | 63 |
| 3.2.1 Bayesian model for joint deconvolution and segmentation | 64 |
| 3.2.2 Sampling the posterior and computing Bayesian estimators | 67 |
| 3.2.3 Experimental results | 68 |
| 3.3 Conclusions | 70 |
| References | 71 |
| 4 Summary | 77 |
| <i>Christos P. Loizou</i> | |
| Part II Speckle filtering | 79 |
| 5 Introduction to speckle filtering | 81 |
| <i>Gabriel Ramos-Llordén, Santiago Aja-Fernández, and Gonzalo Vegas-Sánchez-Ferrero</i> | |
| 5.1 The problem of filtering in medical imaging | 81 |

| | | |
|----------|--|------------|
| 5.2 | Important issues about speckle filtering | 83 |
| 5.2.1 | On the ultimate goal of speckle filtering | 83 |
| 5.2.2 | On the necessity of an accurate speckle model | 85 |
| 5.2.3 | Practical implementation, filter parameters and noise estimation | 85 |
| 5.2.4 | Evaluation and validation of speckle filtering | 88 |
| 5.2.5 | On the similarity between SAR and ultrasound images | 90 |
| 5.3 | Some final remarks | 90 |
| | Acknowledgments | 91 |
| | References | 91 |
| 6 | An overview of despeckle-filtering techniques | 95 |
| | <i>Christos P. Loizou and Constantinos S. Pattichis</i> | |
| 6.1 | An overview of despeckle-filtering techniques | 96 |
| 6.2 | Selected despeckle-filtering applications in ultrasound imaging and video | 103 |
| | References | 103 |
| 7 | Linear despeckle filtering | 111 |
| | <i>Christos P. Loizou and Constantinos S. Pattichis</i> | |
| 7.1 | First-order statistics filtering (<i>DsFlsmv</i> , <i>DsFwiener</i>) | 111 |
| 7.2 | Local statistics filtering with higher moments (<i>DsFlsminv1d</i> , <i>DsFlsmvsk2d</i>) | 124 |
| 7.3 | Homogeneous mask area filtering (<i>DsFlsminsc</i>) | 125 |
| 7.4 | Despeckle filtering evaluation on an artificial carotid artery image | 130 |
| 7.5 | Despeckle filtering evaluation on a phantom image | 132 |
| 7.6 | Despeckle filtering evaluation on real ultrasound images and video | 133 |
| 7.7 | Summary findings on despeckle filtering evaluation | 136 |
| | References | 143 |
| 8 | Nonlinear despeckle filtering | 153 |
| | <i>Santiago Aja-Fernández, Gabriel Ramos-Llordén, and Gonzalo Vegas-Sánchez-Ferrero</i> | |
| 8.1 | Filtering based on local windows | 153 |
| 8.1.1 | Median filter | 154 |
| 8.1.2 | Gamma filter | 155 |
| 8.1.3 | Region-oriented schemes | 156 |
| 8.2 | Nonlocal means schemes | 156 |
| 8.3 | Speckle filtering based on partial differential equations | 158 |
| 8.3.1 | Diffusion filters | 158 |
| 8.3.2 | Total-variation methods | 163 |
| 8.4 | Homomorphic filtering | 163 |
| 8.5 | Bilateral filters | 164 |

| | |
|---|------------|
| 8.6 Geometric filtering | 166 |
| 8.7 Other filtering methodologies | 167 |
| 8.8 Some final remarks | 167 |
| Acknowledgments | 168 |
| References | 168 |
| 9 Wavelet despeckle filtering | 173 |
| <i>Savita Gupta and Lakhwinder Kaur</i> | |
| 9.1 Introduction | 173 |
| 9.2 Discrete wavelet transform | 174 |
| 9.3 Limitations of DWT and its improvements in de-noising | 175 |
| 9.4 Dual tree-complex wavelet transform | 176 |
| 9.5 DT-CWT and shift-invariance | 177 |
| 9.6 CWT and directional selectivity | 178 |
| 9.7 Filter implementation of DT-CWT | 180 |
| 9.8 Practical algorithm | 182 |
| 9.9 Results and discussions | 183 |
| 9.10 Conclusions | 196 |
| References | 197 |
| 10 A comparative evaluation on linear and nonlinear despeckle filtering techniques | 201 |
| <i>Christos P. Loizou</i> | |
| 10.1 Despeckle filtering evaluation of carotid plaque imaging based on texture analysis | 203 |
| 10.1.1 Distance measures | 204 |
| 10.1.2 Univariate statistical analysis | 207 |
| 10.1.3 The kNN classifier | 208 |
| 10.1.4 Image and video quality and visual evaluation | 210 |
| 10.2 Despeckle filtering based on texture analysis (discussion) | 215 |
| 10.3 Image despeckle filtering based on visual quality evaluation (discussion) | 217 |
| 10.4 Despeckle filtering evaluation on carotid plaque video based on texture analysis | 221 |
| 10.5 Video despeckle filtering based on texture analysis and visual quality evaluation (discussion) | 224 |
| 10.6 Concluding remarks and future directions | 227 |
| References | 228 |
| 11 Summary and future directions | 233 |
| <i>Christos P. Loizou</i> | |
| 11.1 Summary on despeckle filtering | 233 |
| 11.2 Future directions | 234 |
| References | 236 |

| | |
|---|------------|
| Part III Speckle tracking | 239 |
| 12 Introduction to speckle tracking in ultrasound video | 241 |
| <i>Gijs A.G.M. Hendriks, Stein Fekkes, Kaj Gijsbertse and Chris L. De Korte</i> | |
| 12.1 M-mode | 241 |
| 12.1.1 Methods | 242 |
| 12.1.2 Applications | 242 |
| 12.2 Doppler imaging | 243 |
| 12.2.1 Method | 243 |
| 12.2.2 Limitations | 244 |
| 12.3 Tissue Doppler imaging | 244 |
| 12.3.1 Method | 244 |
| 12.3.2 Applications | 245 |
| 12.3.3 TDI-based strain (rate) imaging | 246 |
| 12.3.4 Limitations | 246 |
| 12.4 Ultrasound elastography | 246 |
| 12.4.1 Method | 247 |
| 12.4.2 Speckle tracking | 247 |
| 12.4.3 RF-based block matching | 248 |
| 12.4.4 Lateral displacements | 248 |
| 12.4.5 Developments | 249 |
| 12.4.6 Applications in breast | 250 |
| 12.4.7 Other applications | 252 |
| References | 253 |
| 13 Principles of speckle tracking | 259 |
| <i>Brecht Heyde</i> | |
| 13.1 General principles | 259 |
| 13.2 Classification of speckle tracking techniques | 260 |
| 13.2.1 Input data type | 260 |
| 13.2.2 Data dimensionality | 262 |
| 13.2.3 Temporal tracking strategy | 264 |
| 13.3 Overview of speckle tracking techniques | 266 |
| 13.3.1 Doppler-based methods and 1D motion estimators | 266 |
| 13.3.2 Optical flow methods | 269 |
| 13.3.3 Registration-based methods | 271 |
| 13.3.4 Biomechanical models | 271 |
| 13.3.5 Statistical models | 272 |
| 13.3.6 Segmentation-based methods | 272 |
| 13.4 Determinants of speckle tracking performance | 273 |
| 13.4.1 Spatial resolution | 273 |
| 13.4.2 Temporal resolution | 275 |
| 13.4.3 Other factors | 276 |
| References | 278 |

|---|------------|
| 14 Techniques for speckle tracking: block matching | 289 |
| <i>R.G.P. Lopata</i> | |
| 14.1 Introduction | 289 |
| 14.1.1 Strain imaging: an overview | 289 |
| 14.1.2 Terminology | 291 |
| 14.2 1-D speckle tracking and strain imaging | 292 |
| 14.2.1 Data types | 293 |
| 14.2.2 Similarity measures | 295 |
| 14.2.3 Sub-sample displacement estimation | 297 |
| 14.2.4 Window size | 299 |
| 14.2.5 De-correlation | 300 |
| 14.2.6 Re-correlation | 301 |
| 14.3 Multi-dimensional displacement estimation | 305 |
| 14.3.1 From line to block matching | 305 |
| 14.3.2 Multi-dimensional cross-correlation | 306 |
| 14.3.3 2-D window sizes | 307 |
| 14.4 Resolution | 309 |
| 14.5 Regularization | 310 |
| 14.6 Strain estimation | 310 |
| 14.6.1 Strain measures | 310 |
| 14.6.2 Strain vs. local strain | 312 |
| 14.7 In vivo challenges | 313 |
| 14.7.1 Mismatch between US propagation direction and tissue strain | 313 |
| 14.7.2 Anisotropy and non-linearity | 313 |
| 14.8 Elastography | 314 |
| References | 315 |
| 15 Techniques for tracking: image registration | 321 |
| <i>Ariel Hernán Curiale, Gonzalo Vegas-Sánchez-Ferrero and Santiago Aja-Fernández</i> | |
| 15.1 Ultrasound image registration: speckle tracking | 321 |
| 15.2 Similarity model | 324 |
| 15.2.1 Feature-based image registration | 324 |
| 15.2.2 Intensity-based image registration | 324 |
| 15.2.3 Maximum likelihood approach | 326 |
| 15.3 Transformation model | 328 |
| 15.3.1 Rigid transformation | 328 |
| 15.3.2 Nonrigid transformation according to the physical model | 329 |
| 15.3.3 Parametric nonrigid transformation | 333 |
| 15.3.4 Regularization | 335 |
| 15.3.5 Diffeomorphic and inverse transformation | 336 |
| 15.4 Optimization strategy | 338 |
| 15.5 Influence of speckle tracking strategies for motion and strain estimation | 340 |

| | |

| Part IV Selected applications | 403 |
| 19 Segmentation of the carotid artery IMT in ultrasound | 405 |
| <i>Kristen M. Meiburger, Cristina Caresio, Massimo Salvi, U. Rajendra Acharya, and Filippo Molinari</i> | |
| 19.1 Introduction | 405 |
| 19.2 Ultrasound and carotid artery characteristics | 406 |
| 19.2.1 Properties of ultrasound images | 406 |
| 19.2.2 Carotid artery structure and appearance in ultrasound images | 407 |
| 19.3 Carotid artery recognition | 408 |
| 19.3.1 Techniques for automatic carotid artery localization | 408 |
| 19.4 Carotid wall and final IMT segmentation | 411 |
| 19.4.1 Edge-tracking and gradient-based techniques | 411 |
| 19.4.2 Dynamic programming techniques | 412 |
| 19.4.3 Active contours (snakes) | 413 |
| 19.4.4 Transform-based and modeling approaches | 414 |
| 19.4.5 Data mining techniques | 415 |
| 19.5 Performance measurement and comparison | 416 |
| 19.6 Discussion and final remarks | 419 |
| References | 420 |
| 20 Ultrasound carotid plaque video segmentation | 425 |
| <i>Christos P. Loizou and Constantinos S. Pattichis</i> | |
| 20.1 Introduction | 425 |
| 20.2 Methodology and materials used | 429 |
| 20.2.1 Acquisition of ultrasound videos and manual delineation of atherosclerotic plaque | 429 |
| 20.2.2 Video normalization and speckle reduction filtering of ultrasound videos | 430 |
| 20.2.3 Plaque contour initialization and snakes segmentation | 430 |
| 20.2.4 M-mode image generation, boundary extraction, state identification and manual delineation | 431 |
| 20.2.5 Evaluation of the segmentation method and state diagram | 434 |
| 20.3 Results | 434 |
| 20.4 Discussion | 436 |
| 20.4.1 Limitations of the video segmentation method | 438 |
| 20.5 Concluding remarks | 439 |
| References | 439 |
