<b>Preface</b>	xiii
<b>About the editors</b>	xvi
<b>1 Structured catalyst for process intensification in hydrogen production by reforming processes</b>	1
<i>Vincenzo Palma, Concetta Ruocco, Marco Martino, Eugenio Meloni and Antonio Ricca</i>	
Abstract	1
1.1 Introduction	2
1.2 Steam reforming process	3
1.2.1 Thermodynamics	4
1.2.2 Reformers	4
1.2.3 Catalysts	5
1.2.4 Catalyst poisons and desulfurization	6
1.2.5 Carbon deposition	7
1.3 Supported catalysts	9
1.3.1 Supports	10
1.3.2 Rate-limiting steps for a supported catalyst	11
1.3.3 Catalyst deactivation	12
1.4 Structured catalysts: an overview	13
1.4.1 Main advantages	15
1.5 Structured catalysts preparation	16
1.5.1 Substrate materials	17
1.5.2 Substrate activation	18
1.6 Structured catalysts in reforming processes	22
1.6.1 Reforming processes: an overview	22
1.6.2 Steam reforming	22
1.6.3 Partial oxidation	26
1.6.4 Auto-thermal reforming	27
1.6.5 Purification stages	28
Nomenclature	30
References	31
<b>2 Bimetallic supported catalysts for hydrocarbons and alcohols reforming reactions</b>	39
<i>Vincenzo Palma, Concetta Ruocco, Marco Martino, Eugenio Meloni and Antonio Ricca</i>	
Abstract	39

2.1	Introduction	39
2.2	Reforming of methane	40
2.3	Reforming of other hydrocarbons	48
2.4	Reforming of alcohols	52
2.5	Conclusions	64
	Nomenclature	65
	References	65
<b>3</b>	<b>Catalysts for hydrogen production from renewable raw materials, by-products and waste</b>	<b>71</b>
	<i>Claudio Evangelisti, Filippo Bossola and Vladimiro Dal Santo</i>	
	Abstract	71
3.1	Introduction	71
3.2	Primary raw materials	72
3.2.1	Lignocellulose	72
3.2.2	Algae	77
3.3	Secondary raw materials	78
3.3.1	Bio-oil	79
3.3.2	Bio-methanol	85
3.3.3	Bio-ethanol	87
3.4	Waste	88
3.5	Conclusions and perspectives	92
	Abbreviations and acronyms	92
	References	92
<b>4</b>	<b>Ni- and Cu-based catalysts for methanol and ethanol reforming</b>	<b>103</b>
	<i>Mika Huuhtanen, Prem Kumar Seelam and Riitta L. Keiski</i>	
	Abstract	103
4.1	Introduction	103
4.2	Catalysts for alcohols steam reforming	105
4.2.1	Catalysts for methanol steam reforming	107
4.2.2	Catalysts for ethanol steam reforming	111
4.3	Advances and drawbacks	115
4.4	Conclusions	116
	List of abbreviations	116
	List of symbols	117
	References	117
<b>5</b>	<b>Transition metal catalysts for hydrogen production by low-temperature steam reforming of methane</b>	<b>123</b>
	<i>Antonio Vita</i>	
	Abstract	123
5.1	Introduction	123
5.2	Ni-based catalysts	126
5.3	Noble metal-based catalysts (Rh, Ru and Pt)	133

5.4 Conclusions and future trends	139
Abbreviations	142
References	142
<b>6 Supercritical water gasification of biomass to produce hydrogen</b>	<b>147</b>
<i>C. Cannilla, G. Bonura and F. Frusteri</i>	
Abstract	147
6.1 Introduction	147
6.2 Gasification under supercritical water	148
6.3 Feedstock influence on SCWG	153
6.3.1 Lignocellulosic biomass and sewage sludge	153
6.3.2 Cellulose and hemicellulose	158
6.3.3 Glucose	162
6.3.4 Lignin	166
6.3.5 Glycerol	171
6.4 Critical rationalization of data	172
6.5 Conclusion	175
Abbreviations	176
References	177
<b>7 Biofuels starting materials for hydrogen production</b>	<b>185</b>
<i>S. Abramov, M. Shalygin, V. Teplyakov and A. Netrusov</i>	
Abstract	185
7.1 Introduction	186
7.2 Hydrogen from biomass	187
7.2.1 First generation of starting materials for biohydrogen production	187
7.2.2 Second generation of starting materials for biohydrogen production (lignocellulose, biomass, algae, etc.)	188
7.2.3 Third generation of starting materials for biohydrogen production	199
7.3 Membrane recovery of hydrogen: basic regularities for polymeric membranes; classification of membranes	204
7.3.1 Application and potential of standard membrane technology for hydrogen recovery from gaseous mixtures	204
7.3.2 Membrane contactors for hydrogen recovery from gaseous mixtures of bio-origin	213
7.3.3 Combined membrane systems for hydrogen recovery from gaseous mixtures of technogenic and bio-origin	215
7.4 Prospects of commercial membranes application for biohydrogen recovery	217
7.5 Conclusion and summary	218
Acknowledgments	218
List of abbreviations	218
References	219

<b>8 Fixed bed membrane reactors for ultrapure hydrogen production: modeling approach</b>	<b>231</b>
<i>Marjan Alavi, Adolfo Julianelli, Mohammad Reza Rahimpour, Reza Eslamloueyan, Marcello De Falco, Giuseppe Bagnato and Angelo Basile</i>	
Abstract	231
8.1 Introduction	231
8.2 Modeling an MR	232
8.2.1 Tubular reactor modeling	234
8.3 Literature models	245
8.3.1 One-dimensional and two-dimensional models	245
8.3.2 Tri-dimensional (3D) models	247
8.3.3 Effect of the operating conditions	248
8.3.4 Performance improvement	250
8.4 Conclusions and future trends	251
Nomenclature	251
References	253
<b>9 Hydrogen production using micro-membrane reactors</b>	<b>259</b>
<i>Jianhua Tong</i>	
Abstract	259
9.1 Introduction	259
9.2 Types of MMRs	261
9.2.1 Hollow-fiber MMRs	262
9.2.2 Microchannel MMRs	268
9.2.3 Monolithic MMRs	271
9.3 MMRs as a fuel processor for portable PEMFCs	273
9.4 Mathematical modeling of the MMRs for H <sub>2</sub> production	277
9.5 Conclusions	279
List of abbreviations	280
References	281
<b>10 Perovskite membrane reactors</b>	<b>289</b>
<i>Kamran Ghasemzadeh, M. Nasiri Nezhad and Angelo Basile</i>	
Abstract	289
10.1 Introduction	289
10.2 Structure and material of perovskite membranes	291
10.3 Transport mechanism of perovskite membranes	294
10.3.1 Oxygen transport mechanism	294
10.3.2 Hydrogen transport mechanism	295
10.4 Performance of perovskite membranes	296
10.5 Perovskite MRs	296
10.5.1 Applications of perovskite MRs	298

10.6 Conclusion and future trends	311
Acronyms	312
References	313
<b>11 Polymeric membrane materials for hydrogen separation</b>	<b>319</b>
<i>Yuri Yampolskii and Victoria Ryzhikh</i>	
Abstract	319
11.1 Introduction	319
11.2 Short background	322
11.3 Gas permeation properties of polymers in respect of hydrogen	323
11.3.1 Effects of conditions of the transport process	323
11.3.2 Effects of properties of gases	324
11.3.3 Effects of properties of polymers	324
11.4 Routes for improvement of permeation parameters of hydrogen in polymers	328
11.4.1 Cross-linking	330
11.4.2 High free volume polymers	330
11.4.3 Mixed matrix membranes	332
11.5 Separation of isotopes of hydrogen	333
11.6 Concluding remarks	335
Acknowledgment	336
List of symbols	336
List of acronyms/abbreviations	336
References	337
<b>12 Industrial membranes for hydrogen separation</b>	<b>343</b>
<i>Hamid Reza Rahimpour, Mahshid Nategh and Mohammad Reza Rahimpour</i>	
Abstract	343
12.1 Introduction	343
12.2 Conventional methods for hydrogen separation	345
12.2.1 Cryogenic process	345
12.2.2 Pressure swing adsorption	346
12.2.3 Vacuum swing adsorption	347
12.2.4 Temperature swing adsorption	347
12.2.5 Electrical swing adsorption	348
12.3 Membrane technology: separation of hydrogen	349
12.4 Organic membranes	351
12.5 Inorganic membranes	352
12.5.1 Metal and metal-alloy membranes	352
12.5.2 Zeolite membranes	353
12.5.3 Carbon molecular sieve membranes	355
12.5.4 Ceramic membranes	355

12.6	Composite (hybrid) membranes	357
12.7	Membrane reactor for hydrogen production and separation	358
12.8	Conclusion	360
	List of abbreviations	360
	References	361
<b>13</b>	<b>Multifunctional hybrid sorption-enhanced membrane reactor</b>	<b>373</b>
	<i>P. Ribeirinha, M. Boaventura, José M. Sousa and A. Mendes</i>	
	Abstract	373
13.1	Introduction	373
13.2	Hydrogen production via methane steam reforming and purification	375
13.2.1	Methane steam reforming process	375
13.2.2	Methane steam reforming kinetic model	377
13.2.3	PSA principles (hydrogen purification)	378
13.3	Enhanced methane steam reforming processes	380
13.3.1	Sorption-enhanced reactor	381
13.3.2	Membrane-enhanced reactor	383
13.3.3	Hybrid sorption-enhanced membrane reactor	384
13.4	Conclusions	396
	Nomenclature	397
	References	399
<b>14</b>	<b>Carbon-based membranes</b>	<b>405</b>
	<i>Jon Arvid Lie, Xuezhong He, Izumi Kumakiri, Hidetoshi Kita and May-Britt Hägg</i>	
	Abstract	405
14.1	Introduction	405
14.2	Hollow-fiber carbon membranes	408
14.2.1	Preparation of precursor	408
14.2.2	Carbonization and regeneration	410
14.2.3	Challenges of scaling up	413
14.2.4	Sample applications	415
14.3	Supported carbon membranes	417
14.3.1	Preparation	418
14.3.2	Status of development	420
14.3.3	Sample applications	423
14.4	Conclusions	426
	List of acronyms	426
	References	427
<b>15</b>	<b>Separation of hydrogen isotopes by cryogenic distillation</b>	<b>433</b>
	<i>Gianluca Valenti</i>	
	Abstract	433
15.1	Introduction to the rationale of separating hydrogen isotopes	434

15.2	Hydrogen isotopes	436
15.2.1	General terminology	436
15.2.2	Hydrogen element	437
15.2.3	Hydrogen molecules: isotopic forms and ortho/para modifications	438
15.3	Basics of cryogenic distillation	444
15.3.1	Fundamental working principle	444
15.3.2	Application to hydrogen isotopes	445
15.4	Basics of cryogenic liquefaction	446
15.4.1	Fundamental cooling effects	447
15.4.2	Fundamental liquefaction cycles	447
15.4.3	Current hydrogen liquefaction plants	449
15.5	Reference plants	451
15.5.1	Deuterium separation	451
15.5.2	Tritium separation	452
15.6	Further reading	452
15.7	Conclusions	453
	Acknowledgements	453
	Nomenclature	454
