List of figures	xiii
List of tables	xxv
Preface	xxvii
Acronyms	xxxi
1 Definitions objectives and background	1
1.1 Introduction	1
1.2 Classification of electromagnetic transients	2
1.3 Transient simulators	3
1.4 Digital simulation	4
1.4.1 State variable analysis	5
1.4.2 Method of difference equations	5
1.5 Historical perspective	6
1.6 Range of applications	8
References	8
2 Analysis of continuous and discrete systems	11
2.1 Introduction	11
2.2 Continuous systems	11
2.2.1 State variable formulations	12
2.2.2 Time-domain solution of state equations	20
2.2.3 Digital simulation of continuous systems	21
2.3 Discrete systems	29
2.4 Relationship of continuous and discrete domains	31
2.5 Summary	31
References	33
3 State variable analysis	35
3.1 Introduction	35
3.2 Choice of state variables	35
3.3 Formation of the state equations	37
3.3.1 The transform method	37
3.3.2 The graph method	40
3.4 Solution procedure	42

3.5	Transient converter simulation	44
3.5.1	Per unit system	45
3.5.2	Network equations	45
3.5.3	Structure of TCS	49
3.5.4	Valve switchings	49
3.5.5	Effect of automatic time-step adjustments	53
3.5.6	TCS converter control	56
3.6	Example	59
3.7	Summary	63
	References	64
4	Numerical integrator substitution	67
4.1	Introduction	67
4.2	Discretisation of R, L, C elements	67
4.2.1	Resistance	67
4.2.2	Inductance	68
4.2.3	Capacitance	69
4.2.4	Components reduction	71
4.3	Dual Norton model of the transmission line	74
4.4	Network solution	76
4.4.1	Example: conversion of voltage sources to current sources	77
4.4.2	Network solution with switches	78
4.4.3	Example: voltage step applied to RL load	80
4.5	Non-linear or time varying parameters	88
4.5.1	Current-source representation	88
4.5.2	Compensation method	89
4.5.3	Piecewise linear method	91
4.6	Subsystems	92
4.7	Sparsity and optimal ordering	94
4.8	Numerical errors and instabilities	97
4.9	Summary	97
	References	98
5	The root-matching method	99
5.1	Introduction	99
5.2	Exponential form of the difference equation	99
5.3	z -Domain representation of difference equations	102
5.4	Implementation in EMTP algorithm	104
5.5	Family of exponential forms of the difference equation	111
5.5.1	Step response	113
5.5.2	Steady-state response	115
5.5.3	Frequency response	116
5.6	Example	117
5.7	Summary	119
	References	120

6 Transmission lines and cables	121
6.1 Introduction	121
6.2 Bergeron's model	121
6.2.1 Multi-conductor transmission lines	124
6.3 Frequency-dependent transmission lines	127
6.3.1 Frequency to time-domain transformation	130
6.3.2 Phase domain model	135
6.4 Overhead transmission line parameters	135
6.4.1 Bundled sub-conductors	137
6.4.2 Earth wires	138
6.5 Underground cable parameters	138
6.6 Example	143
6.7 Summary	153
References	153
7 Transformers and rotating plant	155
7.1 Introduction	155
7.2 Basic transformer model	155
7.2.1 Numerical implementation	157
7.2.2 Parameters derivation	158
7.2.3 Modelling of non-linearities	160
7.3 Advanced transformer models	162
7.3.1 Single-phase UMEC model	162
7.3.2 UMEC implementation in PSCAD/EMTDC	166
7.3.3 Three-limb three-phase UMEC	168
7.3.4 Fast transient models	171
7.4 The synchronous machine	172
7.4.1 Electromagnetic model	172
7.4.2 Electro-mechanical model	179
7.4.3 Interfacing machine to network	181
7.4.4 Types of rotating machine available	185
7.5 Summary	187
References	187
8 Control and protection	191
8.1 Introduction	191
8.2 Transient analysis of control systems	191
8.3 Control modelling in PSCAD/EMTDC	193
8.3.1 Example	196
8.4 Modelling of protective systems	203
8.4.1 Transducers	203
8.4.2 Electromechanical relays	206
8.4.3 Electronic relays	207
8.4.4 Microprocessor-based relays	207
8.4.5 Circuit breakers	208

8.4.6	Surge arresters	209
8.5	Summary	211
	References	212
9	Power electronic systems	215
9.1	Introduction	215
9.2	Valve representation in EMTDC	215
9.3	Placement and location of switching instants	217
9.4	Spikes and numerical oscillations (chatter)	218
9.4.1	Interpolation and chatter removal	220
9.5	HVDC converters	227
9.6	Example of HVDC simulation	231
9.7	FACTS devices	231
9.7.1	The static VAr compensator	231
9.7.2	The static compensator (STATCOM)	239
9.8	State variable models	241
9.8.1	EMTDC/TCS interface implementation	241
9.8.2	Control system representation	244
9.9	Summary	246
	References	246
10	Frequency-dependent network equivalents	249
10.1	Introduction	249
10.2	Position of FDNE	250
10.3	Extent of system to be reduced	250
10.4	Frequency range	250
10.5	System frequency response	251
10.5.1	Frequency-domain identification	252
10.5.2	Time-domain identification	260
10.6	Fitting of model parameters	260
10.6.1	<i>RLC</i> networks	260
10.6.2	Rational function	262
10.7	Vector fitting	264
10.8	Model implementation	264
10.9	Examples	265
10.10	Summary	273
	References	275
11	Steady-state assessment	277
11.1	Introduction	277
11.2	Phase-dependent impedance of non-linear device	278
11.3	The time-domain in an ancillary capacity	281
11.3.1	Iterative solution for time invariant non-linear components	281
11.3.2	Iterative solution for general non-linear components	282

11.3.3	Acceleration techniques	284
11.4	The time-domain in the primary role	285
11.4.1	Harmonic assessment historically	285
11.4.2	Basic time-domain algorithm	286
11.4.3	Time-step	287
11.4.4	dc System representation	287
11.4.5	ac System representation	287
11.5	Discussion	290
	References	292
12	Mixed time-frame simulation	295
12.1	Introduction	295
12.2	Description of the hybrid algorithm	297
12.2.1	Individual program modifications	299
12.2.2	Data flow	299
12.3	TS/EMTDC interface	299
12.3.1	Equivalent impedances	300
12.3.2	Equivalent sources	302
12.3.3	Phase and sequence data conversions	302
12.3.4	Interface variables derivation	303
12.4	EMTDC to TS data transfer	305
12.4.1	Data extraction from converter waveforms	305
12.5	Interaction protocol	306
12.6	Interface location	308
12.7	Test system and results	309
12.8	Discussion	311
	References	312
13	Transient simulation in real-time	315
13.1	Introduction	315
13.2	Simulation with dedicated architectures	318
13.2.1	Hardware	319
13.2.2	RTDS applications	321
13.3	Real-time and near real-time on standard computers	323
13.3.1	Example of real-time test	324
13.4	Summary	325
	References	325
14	Applications	329
14.1	Introduction	329
14.1.1	Modelling considerations	330
14.1.2	Time-step and plot-step	330
14.1.3	Avoiding singularities	331
14.1.4	Initialisation	331

14.2	Lightning studies	331
14.2.1	EMT modelling	332
14.2.2	Back-flashover modelling	336
14.2.3	Surge arrester modelling	337
14.2.4	Direct lightning strike to phase conductor	338
14.2.5	Lightning strike to ground wire or tower	338
14.3	Capacitor switching studies	341
14.3.1	Inrush	342
14.3.2	Back-to-back switching	351
14.3.3	Voltage magnification	356
14.4	Transformer energisation	363
14.4.1	Parallel sympathetic interaction	367
14.4.2	Other issues	372
14.4.3	Mitigation	372
14.4.4	Modelling	372
14.5	Transient recovery voltage studies	373
14.6	Voltage dips/sags	384
14.6.1	Examples	385
14.7	Voltage fluctuations	388
14.7.1	Modelling of flicker penetration	390
14.8	Voltage notching	393
14.9	Wind power	395
14.9.1	Type 3 WTG	398
14.9.2	Type 4 WTG	400
14.10	Solar photovoltaic farm	404
14.11	HVDC	409
14.11.1	HVDC using LCC	410
14.11.2	HVDC using VSC	416
14.12	Ferroresonance	419
14.13	Electric vehicle charging	424
14.14	Heat-pumps/air-conditioners	426
14.15	Battery storage	429
14.16	Summary	432
	References	432
	Appendix A: System identification techniques	435
A.1	<i>s</i> -Domain identification (frequency-domain)	435
A.2	<i>z</i> -Domain identification (frequency-domain)	437
A.3	<i>z</i> -Domain identification (time-domain)	439
A.4	Prony analysis	440
A.5	Recursive least-squares curve-fitting algorithm	442
	Appendix B: Numerical integration	445
B.1	Review of classical methods	445
B.2	Truncation error of integration formulae	448
B.3	Stability of integration methods	450

Appendix C: Test systems data	453
C.1 CIGRE HVDC benchmark model	453
C.2 Lower South Island (New Zealand) system	453
Appendix D: Developing difference equations	461
D.1 Root-matching technique applied to a first-order lag function	461
D.2 Root-matching technique applied to a first-order differential pole function	462
D.3 Difference equation by bilinear transformation for RL series branch	463
D.4 Difference equation by numerical integrator substitution for RL series branch	463
D.5 Equivalence of trapezoidal rule and bilinear transform	466
Appendix E: MATLAB® code examples	469
E.1 Voltage step on RL branch	469
E.2 Diode-fed RL branch	470
E.3 General version of example E.2	472
E.4 Frequency response of difference equations	481
Index	485
