About the editors xi
List of acronyms xiii
Preface xvii

1 Overview of energy storage technologies 1
Navid Rezaei, Abdollah Ahmadi, Sara N. Afifi, Ahmed F. Zobaa and Shady H.E. Abdel Aleem

1.1 Introduction 1
1.2 The statistical analysis 2
1.3 The bibliometric networks 4
1.3.1 The co-occurrence analysis 5
1.3.2 The co-authorship analysis 6
1.3.3 The citation analysis 6
1.4 ESS benefits 7
1.5 ESS general characteristics 9
1.6 ESS technologies 10
1.7 Comparison of ESS technologies 22
1.7.1 Technology maturity level 22
1.7.2 ESS costs 22
1.8 Conclusions and future trends 22
References 26

2 Energy storage systems: technology, integration and market 31
Paulo F. Ribeiro, Antonio C. Zambroni Souza and Yuri R. Rodrigues

2.1 Introduction 31
2.2 Benefits 32
2.3 State of the art 33
2.4 International scenario 34
2.5 Technologies and applications 37
2.5.1 Flywheel 38
2.5.2 Batteries 39
2.5.3 Supercapacitor 39
2.5.4 Hydraulic pumping plant 40

2.5.5 Solar thermal power plant 40
2.5.6 Superconducting magnetic energy storage (SMES) 40
2.5.7 Decoupling in time between generation and consumption 41
2.5.8 Emergency energy sources 42
2.6 Standards for storage devices 42
2.7 The role of virtual inertia 42
2.7.1 VSYNC's project 43
2.7.2 IEPE's topology 44
2.7.3 ISE lab's topology 44
2.8 Plug-in electric vehicles 45
2.9 Market aspects 46
2.9.1 Market applications and potential 46
2.9.2 Energy storage influence in the market equilibrium 47
2.9.3 Market structures 50
2.9.4 Market scenarios 51
2.10 Conclusions and challenges 53
References 53
Further Reading 55

3 Energy storages in microgrids 59
Hamidreza Nazaripouya and Yubo Wang

3.1 Introduction 59
3.2 Microgrid challenges 60
3.2.1 Microgrid stability 60
3.2.2 Microgrid power management 62
3.2.3 Microgrid power quality and reliability 65
3.3 Energy storage technologies 69
3.4 Energy storage applications in microgrids 71
3.4.1 Stability enhancement 73
3.4.2 Energy management 74
3.4.3 Power quality improvement 75
3.4.4 Reliability improvement 78
3.4.5 Resiliency improvement 80
3.5 Challenges and barriers 80
3.6 Conclusion 81
References 82

4 Energy storage in electricity markets 87
Hrvoje Pandžić and Yury Dvorkin

4.1 Introduction 87
4.2 Energy storage in energy market 87
4.2.1 Energy storage as price taker 88
4.2.2 Numerical example of energy storage as price taker 92
4.2.3 Energy storage as price maker 95

4.3 Energy storage in reserve market 102
4.3.1 Policies enhancing energy storage flexibility 102
4.3.2 Generalized payment scheme 103
4.3.3 Dilemma: Trade energy or frequency regulation? 104
Appendix 105
References 110
Further Reading 111

5 The role of storage in transmission investment deferral and management of future planning uncertainty 113
Ioannis Konstantelos and Goran Strbac

5.1 Introduction 113
5.1.1 System benefits of ES 114
5.1.2 Valuation model variants 115
5.1.3 Motivating example 118
5.1.4 Chapter structure 123
5.2 Stochastic transmission expansion planning with storage 123
5.2.1 Literature review 123
5.2.2 Mathematical formulation 124
5.2.3 Decomposition for computational tractability 128
5.2.4 Operating point selection 134
5.3 Case study – IEEE-24 system 135
5.3.1 Description 135
5.3.2 Deterministic planning 138
5.3.3 Stochastic planning–no storage 138
5.3.4 Stochastic planning with storage 140
5.3.5 Discussion and future directions 142
References 142

6 Sizing of battery energy storage for end-user applications under time of use pricing 147
Guido Carpinelli, Pierluigi Caramia, Fabio Mottola and Daniela Proto

6.1 Introduction 147
6.2 Energy tariff structures 148
6.3 The cost of the storage system 149
6.4 Probabilistic approach for sizing battery systems 156
6.4.1 Brief background on PEM algorithm 157
6.4.2 Applications of PEM for the BESS sizing procedure 157
6.5 Numerical applications 161
6.5.1 Industrial load 162
6.5.2 Commercial load 164
6.5.3 Residential load 167
6.6 Conclusions 169
References 169

7 Assessment and optimization of energy storage benefits in distribution networks **173**
Kalpesh Joshi, Naran Pindoriya and Anurag Srivastava

7.1 Introduction 173
7.2 Modelling and simulation 174
7.2.1 Modelling requirements 175
7.2.2 Tools for operations analysis 175
7.2.3 Tools for planning studies 176
7.2.4 Time-series analysis 177
7.2.5 Sequential time simulations approach 178
7.3 Benefit analysis for BESS 179
7.3.1 DLP analyser and rule-based optimization 180
7.3.2 Test networks 182
7.3.3 Benefit evaluation 184
7.4 Multi-objective optimization and BESS scheduling 188
7.4.1 Fuzzy multi-objective optimization approach 188
7.4.2 Optimization with fuzzy max-average composition 191
7.4.3 Simulation results for utility feeder 192
7.4.4 Fuzzy-PSO approach 193
7.4.5 Simulation results 194
7.5 Summary 195
References 195

8 Case studies from selected countries – Romania and Italy **199**
Morris Brenna, Virgil Dumbrava, Federica Foiadelli, George Cristian Lazaroiu, Michela Longo and Catalina-Alexandra Sima

8.1 Introduction 199
8.2 Storage systems based on lithium-ion batteries 200
8.2.1 System model for the Isernia project 203
8.2.2 The black start of MV island 204
8.3 Optimizing residential customer smart grid with storage devices 207
8.4 Conclusions 214
References 215

9 Case studies from selected countries – the USA **219**
Musa Yilmaz and Heybet Kilic

9.1 Introduction 219
9.2 Market segmentation of energy storage market 222
9.3 Case studies 222
9.3.1 East Penn Manufacturing Project 225
9.3.2 New Mexico Project 225

9.3.3 Auwahi project site in Maui, Hawaii 227
9.3.4 SC Tehachapi energy storage 228
9.3.5 Duke Energy Notrees wind storage 228
9.3.6 Aquion 229
9.3.7 Seeo 230
9.3.8 Xtreme Power on Kodiak Island, Alaska 231
9.3.9 California off-grid PV systems 231
9.3.10 Maryland PV and solar system 232
9.3.11 NaS battery storage system in Presidio 232
9.3.12 DTE Energy 232
9.3.13 Emergency program shelters, Florida 233
9.4 Conclusions 234
References 235

10 The use and role of flywheel energy storage systems 239
Trevor J. Bihl

10.1 Introduction 239
10.2 Background 240
10.2.1 Design considerations 241
10.2.2 Comparisons with alternative energy storage system 244
10.2.3 Sizing considerations 246
10.2.4 Available FES systems 247
10.2.5 FES system research 247
10.3 Applications and research of flywheels energy storage systems 250
10.3.1 Uninterruptible power supply 250
10.3.2 Power quality 251
10.3.3 Integration with renewable energy systems 252
10.3.4 Energy harvesting 252
10.3.5 Aerospace flywheel systems 252
10.3.6 Tangential applications 253
10.4 Conclusions 254
References 254

11 Forecasting and optimisation for multi-purpose application of energy storage systems to deliver grid services: case study of the smarter network storage project 261
Neal S Wade, David M Greenwood, Panagiotis Papadopoulos, Christos Keramisanos and Adriana Laguna

11.1 Introduction 261
11.2 SNS project overview 262
11.2.1 System characteristics 262
11.2.2 SNS software solution 263
11.2.3 SNS learning 263

11.3 Grid services 264
11.3.1 Distribution network services 264
11.3.2 Transmission system services 266
11.3.3 Energy trading services 273
11.4 Objectives of forecasting and optimisation 274
11.5 SNS system design 275
11.5.1 Principles of forecasting and applications in SNS 275
11.5.2 Principles of optimisation and use in SNS 281
11.6 Use of energy storage to deliver grid services 283
11.6.1 Forecasting, scheduling and optimisation algorithms 283
11.6.2 Practical issues 287
11.7 Operational experience 289
11.7.1 Introduction 289
11.7.2 Single service scheduling 289
11.7.3 Multiple service scheduling 296
11.8 Beyond SNS 296
11.8.1 Managing uncertainty 296
11.8.2 Combining smart grid technologies 296
11.9 Summary 298
References 299

12 Optimal coordination between generation and storage under uncertainties 301
Dinghuan Zhu

12.1 Background 301
12.2 A new two-level approach 302
12.3 AFC level 303
12.3.1 Feasibility of decentralized PI frequency control 303
12.3.2 Structure-preserving system modeling 308
12.3.3 Basics of robust control 308
12.3.4 AFC controller design with energy storage 309
12.3.5 Case study 310
12.4 Stochastic optimal dispatch level 316
12.4.1 SMPC basics and problem formulation 317
12.4.2 Solution approach 319
12.4.3 Case study 321
12.5 Summary 322
References 322
