Preface	xiii
Short biographies	xv
1 Introduction	1
<i>Christos A. Frangopoulos</i>	
1.1 Definition of cogeneration	1
1.2 Historical development of cogeneration	1
1.3 Structure of the text	2
References	4
2 Energy use in the world and the benefits of cogeneration	5
<i>Jacob Klimstra</i>	
2.1 Energy and the global economy	5
2.1.1 Introduction	5
2.1.2 The growth pattern in energy use	5
2.2 Fuel use for electricity generation, heating, transportation and industrial processes	8
2.3 Fuel resources and depletion	10
2.4 Energy savings potential with cogeneration	13
2.5 Capabilities for back-up for renewables	14
Acronyms	15
References	16
Further Reading	16
3 Cogeneration technologies	17
<i>Jacob Klimstra</i>	
3.1 Introduction	17
3.2 Gas-turbine-based cogeneration systems	18
3.2.1 The gas turbine concept and its fuel efficiency	18
3.2.2 Exhaust gas emissions limits for gas turbines	20
3.2.3 Controllability of the power and heat output	21
3.2.4 Maintenance aspects	24
3.2.5 The effect of ambient conditions on gas turbine performance	24
3.2.6 Special designs	25

3.3	Reciprocating internal combustion-engine-based cogeneration systems	26
3.3.1	The background and basic concept	26
3.3.2	The practical gas engine	28
3.3.3	The fuel efficiency	29
3.3.4	The heat sources	32
3.3.5	Controllability of the electricity and heat output	34
3.3.6	Fuel–air mixture preparation and control	36
3.3.7	Maintenance aspects	38
3.3.8	Exhaust gas emissions limits for reciprocating engines	39
3.3.9	Response time to required load changes	39
3.4	Fuel-cell-based cogeneration systems	40
3.4.1	The concept of a fuel cell	40
3.4.2	The phosphoric acid fuel cell	42
3.4.3	The molten carbonate fuel cell	42
3.4.4	The solid oxide fuel cell	42
3.5	Rankine and combined cycle cogeneration systems	43
3.5.1	General overview	43
3.5.2	Steam-based cogeneration	43
3.5.3	The organic Rankine cycle	44
3.6	Miscellaneous technologies with minor potential for cogeneration	45
3.6.1	Thermo-electric generators	45
3.6.2	Thermo-photo-voltaic generators	45
3.6.3	Thermo-ionic converters	45
3.6.4	Stirling engines	46
	References	46

4 Electrical engineering aspects **49**

Mats Östman

4.1	Cogeneration plant electrical system overview	49
4.1.1	Cogeneration plant electrical system	49
4.1.2	Grid connection technologies	49
4.2	Types of generators	51
4.2.1	The synchronous generator	51
4.2.2	The asynchronous generator	55
4.2.3	The power-converter system	58
4.2.4	Summary of electrical power conversion	61
4.3	Network stability considerations	61
4.3.1	The challenge of the future	61
4.3.2	The role of inertia in a power system	62
4.3.3	The role of a cogeneration unit in island operation	62
4.4	Cogeneration unit active power control	64
4.4.1	General overview	64
4.4.2	Active power control strategies	65

4.4.3	Traditional droop control	65
4.4.4	Fixed output control	66
4.4.5	Fixed output control with frequency bias	67
4.4.6	Isochronous control	68
4.4.7	Conclusion on active power control strategies	69
4.5	Cogeneration unit reactive power control strategies	69
4.5.1	General overview	69
4.5.2	Reactive power control strategies	69
4.5.3	Voltage droop control	70
4.5.4	Power factor control	71
4.5.5	Constant reactive power control	72
4.5.6	Conclusion on reactive power control strategies	72
	Acronyms	72
	References	73
5	Applications of cogeneration	75
	<i>Jacob Klimstra</i>	
5.1	Introduction to applications of cogeneration	75
5.2	Cogeneration in the utility sector	75
5.3	Cogeneration in the industrial sector	77
5.3.1	Cogeneration for a paper mill	78
5.3.2	Cogeneration in the dairy and bakery industry	78
5.3.3	Cogeneration in the beer brewery industry	79
5.3.4	Cogeneration in a sewage sludge incineration plant	80
5.4	Cogeneration in the commercial sector	81
5.4.1	Cogeneration in hotels	81
5.4.2	Cogeneration in hospitals	82
5.4.3	Cogeneration for data centres	83
5.5	Cogeneration in the agricultural sector	84
5.5.1	Greenhouse applications	84
5.5.2	Product drying	85
5.6	Cogeneration in combination with renewable energy	85
5.7	Cogeneration and desalination	86
	References	87
6	Fuels for cogeneration systems	89
	<i>Jacob Klimstra</i>	
6.1	Introduction	89
6.2	Types and properties of fuels	89
6.2.1	Gaseous fuels	89
6.2.2	Liquid fuels	94
6.2.3	Solid fuels	96
6.3	Fuel- and combustion-related emissions	98
6.3.1	Greenhouse gas emissions	99

6.3.2	NO _x emissions	100
6.3.3	SO ₂ emissions	101
6.3.4	CO, aldehydes and ash emissions	102
	Acronyms	103
	References	103
7	Thermodynamic analysis	105
	<i>Christos A. Frangopoulos</i>	
7.1	Introduction to thermodynamic analysis of cogeneration systems	105
7.2	Indexes of thermodynamic performance	105
7.2.1	Efficiencies based on energy	106
7.2.2	Efficiencies based on exergy	110
7.2.3	Electricity to heat ratio	111
7.2.4	Primary energy savings	112
7.3	Procedure for determination of electricity cogenerated with useful heat	120
7.3.1	What is the issue?	120
7.3.2	Distinction between cogeneration systems without loss and with loss of work production due to useful heat production	120
7.3.3	Splitting the cogeneration unit in CHP and non-CHP parts	121
7.3.4	Procedure to calculate the cogenerated electricity and related parameters	122
	Nomenclature	128
	Appendix 7.A Fundamentals of exergy	130
7.A.1	Definition of exergy	130
7.A.2	Exergy of work and heat	131
7.A.3	Exergy of a closed system	131
7.A.4	Flow exergy	132
7.A.5	Physical flow exergy of ideal gas and of mixture of ideal gases	133
7.A.6	Physical flow exergy of incompressible fluids	133
	Appendix 7.B Power-to-heat ratio in full cogeneration mode	134
	References	135
	Further Reading	136
8	Environmental impacts of cogeneration	137
	<i>Wojciech Stanek and Lucyna Czarnowska</i>	
8.1	Introduction	137
8.2	Definitions and emissions impact categories	138
8.3	Effects on air quality	139

8.3.1	Irreversibility, fuel use, and emissions	140
8.3.2	Estimation of direct gaseous emissions	142
8.3.3	Local and global balance of direct gaseous emissions	146
8.3.4	The various substances that affect global warming	148
8.3.5	Allocation of fuel and emissions of a cogeneration system to its products	149
8.3.6	Cumulative emissions—the case of greenhouse gases	154
8.3.7	Dispersion and impacts of pollutants on the environment and the society—the external environmental cost	157
8.3.8	Thermo-ecological cost	160
8.3.9	Thermo-ecological indicators of environmental benefits and results for selected bio-CHPs	165
8.4	Effects on water and soil quality	167
8.4.1	Effects on water quantity and quality	167
8.4.2	Effects on soil and water quality caused by the emissions	168
8.5	Legal emission limits and emission trading	170
8.6	Noise and vibration	173
	References	174
9	Reliability and availability	179
	<i>Jacob Klimstra</i>	
9.1	Introduction	179
9.2	Definitions	180
9.2.1	Component reliability	180
9.2.2	Operational availability	180
9.2.3	System reliability	181
9.3	Maintenance philosophies	182
9.4	Redundancy	184
	References	188
	Further Reading	188
10	Economic analysis of cogeneration systems	191
	<i>Christos A. Frangopoulos</i>	
10.1	Introduction to economic analysis of cogeneration systems	191
10.2	Types of costs	191
10.2.1	Installed capital cost	191
10.2.2	Operation and maintenance costs	195
10.3	Definition of economic parameters	198
10.3.1	Interest and interest rate	198
10.3.2	Price index	199
10.3.3	Inflation and inflation rate	199
10.3.4	Life cycle and life-cycle cost	200
10.3.5	Estimation of the value of money in time	201

10.4	Measures of economic performance	206
10.4.1	Net present value of the investment	206
10.4.2	Net present cost and present worth cost	207
10.4.3	Internal rate of return	207
10.4.4	Payback period	208
10.5	Procedure for economic analysis of cogeneration systems	209
10.5.1	Estimation of the initial cash flow (F_0)	210
10.5.2	Estimation of the net cash flow for the years of analysis ($F_n, n \geq 1$)	210
10.6	Costing of thermal and electrical and/or mechanical energy	214
10.6.1	Statement of the problem	214
10.6.2	Methods of cost allocation	215
10.7	Internalization of external environmental costs and their effect on the economic performance of cogeneration systems	217
10.7.1	Introductory remarks and definitions	217
10.7.2	Evaluation and internalization of external environmental costs	217
10.8	Examples of economic analysis of cogeneration systems	218
	Nomenclature	229
	References	231
	Further Reading	232
11	Regulatory and legal framework of cogeneration	233
	<i>Costas G. Theofylaktos</i>	
11.1	Introduction	233
11.2	European policy on energy efficiency and on cogeneration	234
11.2.1	The general framework	234
11.2.2	Examples of policy development in European countries	241
11.3	Regulatory and legal framework in countries outside Europe	245
11.3.1	Regulatory and legal framework in the United States of America	245
11.3.2	Policy development of cogeneration in PR of China	247
11.3.3	Policy development of cogeneration in Japan	248
11.4	Impact of electricity and gas liberalisation on cogeneration	250
11.4.1	Introduction to EU electricity and gas liberalisation	250
11.4.2	EU energy liberalisation and its impact on cogeneration	252
11.5	Conclusions	254
	Acronyms	255
	References	256
12	Selection, integration and operation of cogeneration systems	259
	<i>Jacob Klimstra</i>	
12.1	Procedure for system selection and design	259
12.1.1	Determination of the electricity and heat demand	259

12.1.2	Measurement equipment for determining the energy flows	261
12.1.3	Fuel options	262
12.2	Integration of cogeneration in heat supply systems	262
12.2.1	Matching size and demand	263
12.2.2	Hydraulic integration	264
12.3	Summary of possible integration problems	271
	References	272
	Further Reading	272
13	Simulation and optimisation of synthesis, design and operation of cogeneration systems	273
	<i>Christos A. Frangopoulos</i>	
13.1	Introduction to simulation and optimisation of cogeneration systems	273
13.2	Development of simulation models	273
13.3	Performance evaluation of cogeneration systems	275
13.4	Mathematical optimisation of cogeneration systems	276
13.4.1	Definition of optimisation	276
13.4.2	The need and importance of optimisation in cogeneration	276
13.4.3	Levels of optimisation	277
13.4.4	The role of time in optimisation of cogeneration systems	278
13.4.5	Formulation and solution methods of the static optimisation problem	279
13.4.6	Formulation and solution methods of the dynamic optimisation problem	284
13.4.7	On-line and off-line operation optimisation of cogeneration systems	287
13.4.8	Sensitivity analysis	288
13.5	Optimisation examples	289
	References	309
14	Examples of cogeneration projects	313
	<i>Costas G. Theofylaktos</i>	
14.1	Introduction	313
14.2	Cogeneration in district heating	313
14.2.1	The Siekierki CHP plant, Warsaw, Poland	313
14.2.2	The Ziepniekkalns CHP plant, Riga, Latvia	314
14.3	Industrial cogeneration plants	314
14.3.1	Cogeneration in the pulp and paper industry: The UIPSA CHP plant, La Pobla de Claramunt, Barcelona	314
14.3.2	Cogeneration in the primary metal industry: The Aughinish Alumina CHP plant, Askeaton, Limerick, Ireland	315

14.4	Cogeneration in the commercial (building) sector	316
14.4.1	CHP plant in Hospital Central de la Defensa “Gomez Ulla,” Madrid, Spain	316
14.4.2	“Hypo Alpe Adria” Trigeneration System, Tavagnacco, Italy	317
14.4.3	Micro-CHP plant in De Clare Court, Haverfordwest, Pembrokeshire, UK	318
14.5	Cogeneration in the agricultural sector	318
14.5.1	The Agritex Energy S.A. CHP plant, Alexandria, Greece	318
	References	319
15	Research and development on cogeneration	321
	<i>Christos A. Frangopoulos</i>	
15.1	Introduction	321
15.2	Advancements in cogeneration technologies	321
15.2.1	Steam systems	321
15.2.2	Combined cycles	321
15.2.3	Organic Rankine cycles	322
15.2.4	Fuel cells and hybrid systems	322
15.2.5	Thermoelectric generators	322
15.2.6	Nuclear plants	322
15.3	Cogeneration and renewable energy	323
15.3.1	Biomass	323
15.3.2	Solar energy	323
15.3.3	Geothermal energy	324
15.4	Storage of thermal and electric energy	324
15.4.1	Storage of thermal energy	324
15.4.2	Storage of electric energy	324
15.5	Reduction of emissions	325
	References	325
16	Summary and conclusions	329
	<i>Christos A. Frangopoulos</i>
