Abbreviations and interpretations	xxxvii
1 Construction execution model	1
1.1 Introduction	1
1.2 Wider construction environment	1
1.3 Construction execution model – components	2
1.3.1 Technology, QMS and competency	2
1.3.2 Technology	3
1.3.3 QMS procedures	3
1.3.4 Engineering competency	4
1.4 Technology	4
1.4.1 Technology stages	4
1.4.2 Construction design specification	4
1.4.3 Project-specific design specification – SDS	6
1.4.4 Project-specific design specification – DDS	8
1.4.5 Project-generic design specification	8
1.4.6 Detail design	9
1.4.7 Manufacture/procure	9
1.4.8 Equipment site installation	9
1.4.9 Equipment commissioning	9
1.4.10 Equipment and CSBE – terminology	9
1.5 Construction QMS procedures	10
1.5.1 QMS scheme investment process	10
1.5.2 Scheme investment process – stages	11
1.5.3 QMS procedures – format	12
1.5.4 Schemes and projects	13
1.6 Competency	13
1.6.1 Competency model	13
2 Legal and national/international standards	15
2.1 Introduction	15
2.2 UK legal requirements	15
2.2.1 Key legal requirements	15

2.2.2	UK Electricity Act 1989	16
2.2.3	The transmission and distribution licences	17
2.2.4	The grid code	17
2.2.5	The distribution code	17
2.3	UK health and safety legal requirements	18
2.3.1	The Health and Safety at Work etc. Act 1974	18
2.3.2	Health and safety documentation relevant to construction	18
2.3.3	Health and safety executive	19
2.3.4	HASWA – duties	19
2.4	UK Electricity Safety, Quality and Continuity Regulations 2002/2009	20
2.4.1	Purpose of the regulations	20
2.4.2	The ESQC regulations	21
2.4.3	Application of ESQC regulations	23
2.5	UK environmental legislation	23
2.5.1	Environmental legislation categories	23
2.5.2	Range of environmental legislation	23
2.5.3	UK Environment Agency	24
2.6	UK planning acts	25
2.6.1	Planning Act 2008	25
2.6.2	Town and Country Planning Order 1995	26
2.7	National/international technical standards	26
2.7.1	Relevant technical standards	26
2.7.2	Definition of a standard	26
2.7.3	Electricity networks association technical specifications	27
2.7.4	British Standards	27
2.7.5	International Electrotechnical Commission (IEC) standards	27
2.7.6	European Commission for Electrotechnical Standardisation (CENELEC) standards	28
2.7.7	Euronorm standards	28
2.7.8	International Council on Large Electric Systems (CIGRE) standards	28
2.7.9	American National Standards Institute (ANSI) standards	29
2.7.10	IEEE standards	29
2.8	International Organisation for Standardisation (ISO) standards	29
2.8.1	ISO – purpose	29
2.8.2	ISO 9001: Quality Management Systems	29
2.8.3	ISO 14001: Environmental Management Systems	30
2.9	Publically available specification (PAS)	30
2.9.1	Publically available specification	30
2.10	Occupational Health and Safety Assessment Series	31
2.10.1	Occupational Health and Safety Assessment Series (OHSAS)	31
2.11	Organisation-specific technical standards	31
2.11.1	Range of technical documents	31

Part 1 Technology	33
Technology overview	35
3 Power system design fundamentals	37
3.1 Introduction	37
3.2 Basic power system relationships	37
3.2.1 Polar notation	37
3.2.2 The j operator	38
3.2.3 The a operator	38
3.2.4 Power flow relationships	38
3.2.5 Power transfer relationship	40
3.3 Power system current flow analysis	41
3.3.1 Network current flow analysis methods	41
3.4 Transformer fundamentals	46
3.4.1 Two-winding transformer – principles	46
3.4.2 Transformer relationships	48
3.4.3 Transformer equivalent circuit	48
3.4.4 Referred impedance – two-winding transformer	48
3.4.5 Autotransformer	49
3.4.6 Referred impedance – autotransformer	49
3.4.7 Current transformers	51
3.5 Per-cent impedance	52
3.5.1 Per-cent impedance – concept	52
3.5.2 Per-cent impedance – basics	52
3.5.3 Per-cent impedance – advantages of use	53
3.5.4 Ohms and per-cent impedance conversion	55
3.6 Synchronous generator fundamentals	55
3.6.1 Synchronous generator introduction	55
3.7 Wind generation	61
3.7.1 Induction generator – principles	61
3.7.2 Early wind generators	63
3.7.3 Modern wind generators	63
3.7.4 Wind generator – fault level contribution	64
3.8 Power system transients	64
3.8.1 Types of transient	64
3.8.2 Currents arising on energisation of an inductive circuit	64
3.8.3 Currents arising on energisation of a capacitive circuit	66
3.9 HVDC transmission	67
3.9.1 HVDC transmission – introduction	67
3.9.2 HVDC transmission – simplified description	68
3.9.3 HVDC convertors – types	68

4	Power system fault analysis	71
4.1	Power system fault analysis – requirements	71
4.2	Symmetrical components fundamentals	72
4.2.1	Symmetrical components – basic concepts	72
4.2.2	Practical determination of phase-sequence impedances	74
4.2.3	Phase-sequence impedances of an OHL (or HV cable)	74
4.2.4	Phase-sequence impedances of a star-delta transformer	74
4.2.5	Phase-sequence impedance of an auto-transformer	75
4.2.6	Phase-sequence impedances of an earthing transformer	76
4.2.7	OHL single and double circuit impedances	79
4.2.8	Impedances database	79
4.3	Generator short-circuit performance	81
4.3.1	Generator short-circuit considerations	81
4.3.2	Rotor and stator windings	81
4.3.3	Unloaded generator subject to three-phase short-circuit at generator terminals	81
4.3.4	Generator fault current – practical considerations	84
4.3.5	Loaded generator subject to a three-phase short-circuit at the generator terminals	85
4.3.6	Generator sequence impedances	86
4.3.7	Generator subject to an open-circuit	87
4.4	Sequence networks for common fault conditions	87
4.4.1	Sequence networks	87
4.4.2	Three-phase fault	88
4.4.3	Single-phase-to-earth fault	88
4.4.4	Phase-to-phase fault	90
4.4.5	Single-phase open-circuit	90
4.4.6	Phase-sequence current flow analysis	91
4.5	Maximum and minimum fault level studies	93
4.5.1	Maximum and minimum busbar fault levels	93
4.5.2	Maximum and minimum fault level studies – feeders	93
4.5.3	Use of maximum and minimum fault level studies	94
4.6	Fault currents – methods and techniques	94
4.6.1	Fault calculations – overview	94
4.6.2	Generator driving voltage	94
4.6.3	Methods and techniques	95
4.6.4	Use of circuit maximum and minimum fault levels	96
4.6.5	Fault current decrement and protection operation	98
4.6.6	Transformer tap changers	98
4.6.7	The infinite busbar	98
4.6.8	Comparative impedances	100
5	HV network design	101
5.1	Introduction	101
5.2	HV network planning standards	102
5.2.1	Network planning standards – purpose	102

5.3	HV network design standards – power system studies	105
5.3.1	System studies – requirements	105
5.4	HV network design – fixed design parameters	111
5.4.1	Fixed design standards	111
5.5	Project-specific design	121
5.5.1	Project-specific design considerations	121
5.6	Future power network challenges	122
5.6.1	Power flows	122
5.6.2	Smart grid	122
6	Overhead line design	123
6.1	Introduction	123
6.2	OHL design overview	123
6.2.1	OHL design – key requirements	123
6.3	Tower, pole and foundation design	124
6.3.1	Tower design	124
6.3.2	Tower aesthetic design	128
6.3.3	Pole design	128
6.3.4	Foundations	129
6.4	Conductor system design	131
6.4.1	Conductor requirements	131
6.4.2	Conductors – materials and types	131
6.4.3	Gap conductor	133
6.4.4	Conductor selection	133
6.5	Insulators and OHL fittings design	134
6.5.1	Insulator requirements	134
6.5.2	Insulator materials	136
6.5.3	OHL fittings	137
6.6	Tower earth-wires and earth resistance	139
6.6.1	OHL earth-wires	139
6.6.2	Tower earth resistance	140
6.7	Conductor tension and sag	140
6.7.1	Tension and sag – considerations	140
6.7.2	Sag and tension – basic theory	140
6.7.3	Determination of sag	141
6.7.4	Conductor tension factors	142
6.7.5	Temperature/ice/wind considerations	142
6.7.6	Change of state equation	143
6.7.7	Equivalent span	144
6.7.8	Tension and sag charts	145
6.7.9	Conductor supports not on same level	145
6.8	Tower height and spacing	145
6.8.1	Tower height and conductor clearances	145
6.8.2	Tower spacing	145
6.9	OHL design philosophy	146
6.9.1	Deterministic design	146

6.9.2	Probabilistic design	146
6.9.3	Load factored design	147
6.10	Routing and siting	148
6.10.1	Routing and siting – stages	148
6.10.2	Initial route and siting selection	148
6.10.3	Inspection of the initial route	149
6.10.4	Final route and siting selection	149
6.10.5	Support plotting	149
6.10.6	Support pegging	149
6.10.7	Aerial surveys and software solutions	150
6.11	OHL asset replacement	150
6.11.1	Asset replacement	150
6.12	Review	150
7	High voltage and auxiliary cable design	151
7.1	Introduction	151
7.2	HV cable design	151
7.2.1	HV cables – considerations	151
7.3	Cable historical development and types	152
7.3.1	HV cable historical development	152
7.3.2	Single-core vs three-core cable	155
7.3.3	Summary of cable types and installations	155
7.4	Cable technical characteristics	156
7.4.1	Cable technical characteristics examined	156
7.4.2	Cable temperature monitoring	162
7.5	Cable ratings	162
7.5.1	Cable continuous current rating	162
7.5.2	Cyclic rating	164
7.5.3	Cable short-circuit current rating	165
7.6	Cable laying mediums, formations and impressed voltages	165
7.6.1	Types of cable laying mediums	165
7.6.2	Single-core cable formations	167
7.6.3	Impressed voltage	168
7.7	Cable terminations and joints	168
7.7.1	Terminations and joints – considerations	168
7.7.2	Cable terminations	168
7.7.3	Cable joints	170
7.8	HV-cable type tests	170
7.8.1	Cable type tests – requirements	170
7.9	Cable specification, design and routing	171
7.9.1	Cable specification – considerations	171
7.9.2	Cable overall design and routing	171
7.10	Gas insulated transmission line	172
7.10.1	GIL background	172
7.10.2	GIL construction	173

7.10.3	GIL installations	173
7.10.4	Advantages of GIL	174
7.11	Auxiliary cables	174
7.11.1	Auxiliary cable types	174
7.11.2	Fibre optic cables	177
8	Substation design	179
8.1	Substation design considerations	179
8.2	Busbar systems	180
8.2.1	Busbar systems – design considerations	180
8.3	Merits of AIS vs GIS substations	187
8.3.1	AIS vs GIS considerations	187
8.4	AIS substation clearances	187
8.4.1	AIS substation – required clearances	187
8.4.2	Bay centres and bay separation	190
8.4.3	Over-sailing conductors	192
8.5	Busbar design and forces	193
8.5.1	Busbars – overview	193
8.5.2	Busbar short-circuit forces	193
8.5.3	Busbar withstand forces	194
8.5.4	Busbar forces – design considerations	194
8.5.5	Busbar insulators	195
8.6	Design merits of indoor vs outdoor substations	195
8.6.1	Indoor vs outdoor	195
8.7	Substation design principles and specification	196
8.7.1	Substation design principles	196
8.7.2	Phasing diagram	196
8.7.3	Substation design specification	196
9	Substation HV equipment design	199
9.1	Introduction	199
9.2	Circuit breakers	199
9.2.1	Circuit breaker – duty	199
9.2.2	Arc interruption mechanism	200
9.3	Circuit breaker switching duties	201
9.3.1	Circuit breaker interrupter duties – summary	201
9.4	Arc interruption mediums and methods	204
9.4.1	Arc interruption mediums and methods – categories	204
9.5	Circuit-breaker-type classification	208
9.5.1	Circuit breaker type – characteristics	208
9.5.2	Circuit-breaker-type and voltage-range classification	209
9.6	Circuit breaker tripping and close times	209
9.6.1	Tripping and closing considerations	209
9.7	Circuit-breaker specification	212
9.7.1	Electrical design specification	212
9.7.2	Circuit-breaker specification standards	213

9.8	Earthing devices	213
9.8.1	Earthing switches – design characteristics	213
9.8.2	Metalclad switchgear	214
9.8.3	Portable earths	214
9.8.4	Interlocking and indications	215
9.8.5	Earthing device ratings	215
9.9	Disconnectors	216
9.9.1	Disconnectors – design characteristics	216
9.9.2	Metalclad switchgear	217
9.9.3	Disconnector interlocking and indications	217
9.9.4	Sequential disconnectors	218
9.9.5	Disconnector ratings	218
9.10	Interlocking	218
9.10.1	Interlocking – purpose	218
9.10.2	Computer-based interlock systems	221
9.11	Power transformers	221
9.11.1	Power transformers – introduction	221
9.12	Reactors	231
9.12.1	Reactor types	231
9.13	Quadrature boosters	232
9.13.1	Quadrature boosters – purpose	232
9.13.2	Quadrature booster – winding arrangements	232
9.13.3	Quadrature booster theory	233
9.13.4	Quadrature booster – physical arrangement	234
9.14	Manually switched capacitors	234
9.14.1	Manually switched capacitors – purpose	234
9.14.2	MSC connection arrangements	234
9.15	Static VAr compensators	236
9.15.1	FACTS technology	236
9.15.2	SVC alternative arrangements	238
9.15.3	SVC application	239
9.16	Voltage transformers	240
9.16.1	Voltage transformer – overview	240
9.16.2	Voltage transformers – types	241
9.17	Current transformers	242
9.17.1	Current transformers – overview	242
9.17.2	Current transformer ratings	242
9.17.3	Current transformer accuracy	242
9.17.4	Current transformer – locations	245
10	Protection and control systems design	247
10.1	Introduction	247
10.2	Protection types and operating characteristics	247
10.2.1	Protection types – introduction	247

10.3	Overcurrent and earth-fault protection	252
10.3.1	Overcurrent and earth-fault protection circuitry	252
10.3.2	IDMTL overcurrent and earth-fault relay – operating characteristics	253
10.3.3	IDMTL relay – settings and grading	255
10.3.4	IDMT relay – natural grading	256
10.3.5	Instantaneous overcurrent relay	257
10.4	Directional overcurrent protection	257
10.4.1	Directional relays – fundamentals	257
10.4.2	Directional overcurrent relay	258
10.4.3	Directional earth-fault relay	258
10.5	High-impedance circulating current protection	259
10.5.1	High-impedance circulating current – background	259
10.5.2	Circulating current protection – principles	260
10.5.3	High-impedance circulating current – stability voltage	260
10.5.4	High-impedance circulating current – primary operating current	261
10.5.5	High-impedance circulating current – applications	263
10.6	Transformer protection	263
10.6.1	Two winding transformer – biased differential protection	263
10.6.2	Restricted earth-fault protection	267
10.6.3	Autotransformer overall differential protection	269
10.6.4	Two-stage overcurrent protection	270
10.6.5	Two-stage standby-earth-fault (SBEF) relay	271
10.6.6	Transformer HV high-set overcurrent (HSOC)	271
10.6.7	Buchholz and winding temperature protection	272
10.7	Feeder-unit protection	272
10.7.1	Feeder-unit protection – principles	272
10.8	Power line carrier protection	275
10.8.1	Power line carrier protection – background	275
10.8.2	Power line carrier protection – equipment and performance	275
10.9	Numeric feeder-unit protection	278
10.9.1	Numeric feeder-unit protection – considerations	278
10.9.2	Relay characteristics	279
10.9.3	Settings considerations	279
10.10	Distance protection	279
10.10.1	Distance protection – introduction	279
10.11	Busbar protection	292
10.11.1	Busbar protection – overview	292
10.12	Circuit breaker fail protection	297
10.12.1	Circuit breaker fail – requirements	297
10.12.2	Circuit breaker fail protection – numeric relays	299

10.13	Protection, control and telecomms – communication channels	299
10.13.1	Communication channel requirements	299
10.13.2	Communication channel mediums	300
10.13.3	Communications equipment – requirements	301
10.14	Inter-tripping	301
10.14.1	Inter-tripping – application	301
10.14.2	Unstabilisation, fault throwers and neutral voltage displacement protection	303
10.15	Protection application	304
10.15.1	Protection application considerations	304
10.15.2	Protection application – feeders	305
10.15.3	Protection application – transformers	306
10.15.4	Protection application – complex circuits	309
10.16	Protection and control settings	310
10.16.1	Protection and control settings policy	310
10.17	Control systems	312
10.17.1	Control systems – introduction	312
10.18	Voltage control	312
10.18.1	Voltage control – introduction	312
10.19	Synchronising	317
10.19.1	Synchronising relay – purpose	317
10.19.2	Voltage selection scheme	319
10.20	Auto-switching	320
10.20.1	Auto-switching – introduction	320
10.21	Operational tripping	324
10.21.1	Operational tripping – requirements	324
10.22	SCADA system	326
10.22.1	SCADA system – overview	326
10.22.2	SCADA system – design	327
10.22.3	SCS design requirements	328
10.23	Protection and control accommodation	328
10.23.1	Relay panel requirements	328
10.23.2	Cubicle design and practical considerations	329
10.24	Protection and control asset replacement	330
10.24.1	Asset replacement considerations	330
10.25	Batteries and DC supplies	331
10.25.1	Battery systems	331
11	Impressed voltage	335
11.1	Impressed voltage – composition	335
11.2	Permanent and temporary works	335
11.3	Impressed voltage – principles	336
11.3.1	Capacitive coupling – principles	336
11.3.2	Inductive coupling – principles	337
11.3.3	Conductive coupling – principles	340
11.3.4	Trapped charge – principles	341

11.4	Inductive coupling – analysis	342
11.4.1	Current transformer analogy	342
11.4.2	Inductive coupling – position of induced emf	343
11.5	Physiological effects of electricity	345
11.5.1	Electric shock	345
11.5.2	Impedance model of the human body	345
11.5.3	Electric shock – current thresholds	346
11.5.4	Electric shock – voltage thresholds	347
11.5.5	Touch potential – safe voltage threshold	347
11.5.6	Single phase to earth fault – inductive coupling safe voltage threshold	349
11.5.7	Balanced load current – inductive coupling safe voltage threshold	349
11.6	Capacitive coupling – IV magnitude calculations	350
11.6.1	Conducting plane images	350
11.6.2	Three-phase coupling	352
11.6.3	Example of capacitive coupling	353
11.7	Inductive coupling – IV magnitude calculation	355
11.7.1	Conducting plane images	355
11.7.2	Three-phase coupling – balanced load current	356
11.7.3	Single phase to earth fault inductive coupling	358
11.7.4	Example of inductive coupling	358
11.8	Practical considerations	359
11.8.1	Combined effect of capacitive and inductive coupling	359
11.8.2	Capacitive vs inductive coupling – severity	360
11.8.3	Working in an air-insulated substation	360
11.8.4	Rules and guidance for controlling IV	361
11.8.5	Microshocks	361
11.8.6	Overhead lines	362
11.8.7	Long metallic objects	362
11.8.8	Operational considerations	364
11.8.9	HV cables	364
11.8.10	Electric field shielding	369
11.8.11	Magnetic field screening	370
11.8.12	GIS enclosures	371
11.8.13	GIS switchgear – trapped charge	371
11.8.14	Air cored reactors	372
11.8.15	Electric and magnetic field design limits	372
11.9	The management of impressed voltages	373
12	Substation earthing design	375
12.1	Introduction	375
12.2	Objectives and regulations	375
12.2.1	Historical	375
12.2.2	Regulatory requirements	376
12.2.3	Substation earthing objectives	376

12.3	Earth resistivity	377
12.3.1	Resistivity	377
12.4	Earth electrode systems	378
12.4.1	Types of electrodes	378
12.4.2	Driven vertical rods	379
12.4.3	Buried horizontal or vertical plate	379
12.4.4	Buried horizontal wire (or strip)	379
12.4.5	Buried horizontal grid	380
12.4.6	Multiple-driven vertical rods	381
12.4.7	Combined horizontal grid with vertical rods	381
12.5	Earth conductors and earth mat	382
12.5.1	Earthing conductor – considerations	382
12.5.2	Earth mat connections	382
12.6	Earthing system and earth fault current	383
12.6.1	Earthing system	383
12.6.2	Earth system impedance	384
12.6.3	Earth fault current	385
12.7	Voltage limits	386
12.7.1	Substation ROEP – voltage design limits	386
12.7.2	Transferred potential	386
12.7.3	Touch potential	387
12.7.4	Third-party infrastructure	388

14.4.14	Contaminated sites	434
14.4.15	OHL considerations	434
14.4.16	HV cable considerations	435
14.4.17	Site installation – completion checks	435

15 Equipment commissioning – technical	437
15.1 Commissioning – introduction	437
15.2 Test procedures and documentation	438
15.2.1 Test procedures and documentation – overview	438
15.2.2 Formal commissioning stages	439
15.3 Substation earthing	439
15.3.1 Substation earthing resistance	439
15.3.2 Substation rise of earth potential	441
15.4 Insulation resistance	441
15.4.1 Insulation resistance – LV circuitry	441
15.4.2 Insulation resistance – transformers	442
15.4.3 Insulation resistance – cables	442
15.5 Current transformers	442
15.5.1 Current transformers – requirements	442
15.6 Protection and control equipment tests	446
15.6.1 Protection and control equipment tests – general	446
15.6.2 Secondary injection test unit	447
15.7 VT supplies	452
15.7.1 VT wiring – secondary injection	452
15.8 DC circuitry logic tests	453
15.8.1 DC logic tests – requirements	453
15.9 Protection and control – common equipment	454
15.9.1 Equipment under consideration	454
15.10 Auto-switching	459
15.10.1 Auto-switching – general	459
15.11 HV equipment tests	462
15.11.1 HV equipment commissioning – general	462
15.12 Substation battery systems and DC supplies	468
15.12.1 Battery system and DC supplies	468
15.13 Loadability	469
15.13.1 Loadability test	469
15.14 Energisation and on-load tests	469
15.14.1 Circuit energisation and on-load tests – overview	469
15.15 Substation commissioning overview	473
15.15.1 Substation commissioning tests and inspections	473
Part 2 Construction QMS procedures	477
Construction QMS procedures – overview	479
16 Construction delivery models and contracts	481
16.1 Introduction	481
16.2 Construction delivery risk considerations	481
16.2.1 Construction delivery risks	481
16.2.2 Construction design specification risk	483
16.2.3 Single or multiple contract risk	485

16.3	Construction delivery models	485
16.3.1	Range of construction delivery models	485
16.4	Contract price	488
16.4.1	Types of contract price	488
16.5	Contract process and terms and conditions	490
16.5.1	Contract process	490
16.5.2	QMS considerations	497
17	Scheme investment procedure	499
17.1	Scheme procedures	499
17.2	Construction QMS procedures – structure and subject-matter	499
17.3	Scheme investment procedure	501
17.3.1	The scheme investment procedure – application	501
17.3.2	Scheme investment procedure – content	501
17.3.3	Scheme team	501
17.3.4	Scheme timescales	502
17.3.5	Need case	502
17.3.6	Optioneer	503
17.3.7	Develop	504
17.3.8	Need case, optioneer, develop – range of documentation	509
17.3.9	Sanction	513
17.3.10	Scheme review/closure	513
17.4	Major infrastructure projects	514
17.4.1	Major infrastructure projects – outline	514
17.4.2	Scheme alignment with the planning act 2008	514
17.4.3	Holford and Horlock Rules	516
17.5	Scheme investment procedure – complexity	517
18	Construction health and safety management	519
18.1	Safety management system	519
18.2	Health and Safety at Work etc. Act 1974	519
18.2.1	HASWA etc. 1974	519
18.3	Key regulations and guidance documents	521
18.3.1	Key regulations and guidance documents	521
18.3.2	Management of Health and Safety at Work Regulations 1999	522
18.3.3	Control of substances hazardous to health regulations (COSHH) 2002	523
18.3.4	Pressure system safety regulations 2000 (PSSR)	524
18.3.5	Work at height regulations 2005	525
18.3.6	Lifting Operations and Lifting Equipment Regulations 1998 (LOLER)	525
18.3.7	Reporting of Injuries, Diseases and Dangerous Occurrences Regulations 2013 (RIDDOR)	526
18.3.8	HSG168 fire safety in construction	526

18.3.9	HSG 47 avoiding danger from underground services	527
18.3.10	Provision and use of work equipment regulations 1998 (PUWER)	528
18.3.11	Person protective equipment (PPE) at work regulations 1992	528
18.4	The occupier	528
18.4.1	Occupiers liability	528
18.4.2	Occupiers Liability Act 1957/1984	529
18.4.3	HASWA 1974 and control of premises	529
18.5	Electricity at work regulations 1989	530
18.5.1	Guidance on regulations (2007)	530
18.6	Safety rules	531
18.6.1	Purpose of the safety rules	531
18.6.2	Safety rule certificates	532
18.6.3	Safety distance	535
18.6.4	Safety rule duty holder responsibilities	535
18.6.5	Safety rule practice when working on a OHL	536
18.6.6	Safety rule practice when working on HV cables	537
18.7	The addition/removal of equipment to/from the power system	537
18.7.1	Addition/removal of equipment to/from the system	537
18.7.2	Addition/removal of HV equipment to/from the system	538
18.7.3	Addition/removal of LV equipment, mechanical equipment and earthing to/from the system	540
18.7.4	Change of circuit name/equipment nomenclature	540
18.8	Temporary works	540
18.8.1	Temporary works – composition	540
18.8.2	Temporary works duty holders	541
18.8.3	Temporary works documentation	541
18.9	Construction (design and management) regulations 2015	542
18.9.1	CDM regulations – scope	542
18.9.2	CDM construction phases	543
18.9.3	CDM duty-holders	544
18.9.4	Clients	544
18.9.5	Designers	544
18.9.6	Principal designers	545
18.9.7	Principal contractors	545
18.9.8	Contractors	545
18.9.9	Workers	546
18.9.10	CDM documentation	546
18.9.11	Principal contractor – occupier interface	548
18.9.12	Sensible monitoring	550
18.9.13	Interfaces between CDM zones	551
18.9.14	Safe system of work	552
18.9.15	Setting to work	552

18.9.16	CDM competency requirements	552
18.9.17	Execution of CDM within a safety management system	553
19	Project management procedures	555
19.1	Project management – overview	555
19.2	Project manager (power network company)	556
19.2.1	Project manager (power network company) – accountabilities	556
19.2.2	Project manager – responsibilities to be managed	556
19.2.3	The project team	557
19.2.4	Progressing a project	560
19.2.5	Project team performance	561
19.2.6	Project review meeting	562
19.2.7	Project manager – competency requirements	563
19.2.8	Equipment transfer – stages and formalities	564
19.3	Project manager (contractor)	564
19.3.1	Project manager (contractor) – accountabilities	564
19.4	Project programme	566
19.4.1	Project programme requirements – general	566
19.4.2	Project programme commercially available packages	568
19.4.3	Project programme – power network company	568
19.4.4	Project programme – contractor	569
19.5	Resource management	569
19.5.1	Resource management – requirement	569
19.5.2	Resources to be considered	570
19.6	Outage management	570
19.6.1	Outage management – requirements	570
19.6.2	Outage management – planning	571
19.7	Risk management	571
19.7.1	Risk management – requirements	571
19.7.2	Risk register	572
19.7.3	Typical risk register risks	572
19.8	Financial management	574
19.8.1	Financial management – overview	574
19.8.2	Project finance S curve	575
19.8.3	Value of work done	575
19.8.4	Project accounting – power network company	576
19.8.5	Financial asset register – power network company	578
19.8.6	Project accounting – contractor	579
19.9	Contract management	579
19.9.1	Contract management – requirements	579
19.10	Consents and wayleaves	580
19.10.1	Consents and wayleaves – overview	580
19.10.2	Bodies providing statutory consents and permits	581
19.10.3	Project management considerations	581

19.11	Project filing and project audit	582
19.11.1	Project filing	582
19.11.2	Project audit	583
19.12	Project quality management	584
19.12.1	Project quality plan	584
19.13	Outstanding work and post-project review	584
19.13.1	Outstanding work	584
19.13.2	Post-project review	585
20	Scheme design procedures	587
20.1	Scheme design procedures overview	587
20.2	Design management	587
20.2.1	Scheme design process	587
20.2.2	Scheme design team	587
20.2.3	Scheme design management procedure – purpose	590
20.2.4	Scheme design management – stages	590
20.2.5	Detail design specification	593
20.2.6	Project design team – contractor	594
20.2.7	Design review meetings	596
20.3	Protection and control settings management	598
20.3.1	P&C settings management procedure – relative importance	598
20.3.2	P&C settings management procedure – objectives	598
20.3.3	P&C settings management – single function relays	598
20.3.4	P&C settings management – programmable multi-function numeric relays	599
20.3.5	Relay settings record – administration	603
20.3.6	Numeric relay settings process – electronic comparison	603
20.3.7	Settings calculations’ timescales	605
20.3.8	Relay settings process – significance	605
20.4	Thermal rating schedules	605
20.4.1	Equipment thermal ratings	605
20.4.2	Continuous current ratings	606
20.4.3	Short-term overloads – emergency ratings	606
20.4.4	Seasonal ratings	606
20.4.5	Cyclic rating/loading	606
20.4.6	Transformer loading	607
20.4.7	Protection relay loadings	607
20.4.8	Protection tripping considerations	608
20.4.9	Thermal rating schedules – procedural requirements	608
20.5	Protection and automatic reclose/switching schedules	609
20.5.1	Protection and automatic reclose/switching schedules – requirement	609
20.5.2	Protection and automatic reclose/switching schedules – typical format	609

20.5.3	Protection and automatic reclose/switching schedules – procedural requirements	609
20.6	HV equipment nomenclature	611
20.6.1	HV Equipment nomenclature – requirement	611
20.6.2	Equipment nomenclature – procedure	611
20.7	Operation diagrams	613
20.7.1	Operation diagrams – purpose	613
20.7.2	Substation operation diagram	613
20.7.3	Substation gas zone diagram	613
20.7.4	OHL and cable route diagram	613
20.7.5	Procedural requirements	614
20.8	SCADA systems management	616
20.8.1	SCADA system management – requirements	616
20.8.2	New SCS	616
20.8.3	Addition to an existing SCS	617
20.9	Drawings management	617
20.9.1	Drawings management – requirement	617
20.9.2	Drawings manager procedure – outline	617
20.9.3	Drawing management procedure – requirements	619
21	Manufacture procedure	621
21.1	Introduction	621
21.2	Manufacturing assurance	621
21.2.1	Manufacturing assurance – requirements	621
21.3	Equipment tests	622
21.3.1	Equipment tests – requirements	622
22	Site installation procedure	625
22.1	Site installation procedure – overview	625
22.2	Site installation – stages	625
22.2.1	Site installation – the five stages	625
22.3	Equipment installation – inputs and outputs	628
22.3.1	Site installation inputs and outputs – overview	628
22.4	Site installation procedures	629
22.4.1	Site installation procedures – summary	629
22.5	Site duty holders and responsibilities	634
22.5.1	Site duty holders	634
22.6	Site installation meeting arrangements	638
22.6.1	Site installation key meetings	638
22.7	Site health and safety requirements	640
22.7.1	Site health and safety – considerations	640
22.8	Site records and documentation filing	644
22.8.1	Records and documentation filing – requirements	644
22.9	Site installation – summary	645

23 Equipment commissioning procedure	647
23.1 Introduction	647
23.2 Commissioning objectives	647
23.2.1 Commissioning process objectives	647
23.3 Management arrangements	648
23.3.1 Commissioning management arrangements	648
23.4 Commissioning Stages 1 and 2	650
23.4.1 Stages 1 and 2 commissioning	650
23.5 Commissioning programme	651
23.5.1 Commissioning programme – purpose and content	651
23.6 Commissioning inspections	651
23.6.1 Commissioning inspection schedules	651
23.7 Commissioning switching programme	654
23.7.1 Commissioning switching programme – purpose	654
23.7.2 Commissioning switching programme – content	654
23.8 Commissioning certificates	654
23.8.1 Commissioning certificates – types	654
23.9 Commissioning technical documentation	658
23.9.1 Commissioning technical documentation – types	658
23.9.2 Equipment commissioning documentation	658
23.9.3 Site-specific commissioning documentation	659
23.9.4 Technical and operational data	659
23.10 OHL and HV cable commissioning	660
23.10.1 OHL and HV cable commissioning – requirements	660
23.10.2 OHL commissioning	660
23.10.3 HV cable commissioning	660
23.11 Health and safety	661
23.11.1 Commissioning health and safety – considerations	661
23.12 Equipment decommissioning	662
23.12.1 Decommissioning – considerations	662
23.12.2 Decommissioning certificate	662
23.13 Commissioning roles and responsibilities	662
23.13.1 Key roles and responsibilities	662
23.14 Commissioning panel meeting agenda – and filing	665
23.14.1 Commissioning panel meeting agenda	665
23.14.2 Commissioning documentation filing	665
23.14.3 Commissioning process – overview	667
24 Project stage-by-stage procedure	669
24.1 Introduction	669
24.2 Project stage by stage – procedural requirements	669
24.2.1 Project stage-by-stage document – scope	669
24.2.2 Project stage-by-stage document – management arrangements	670

24.2.3	Project stage-by-stage document preparation and implementation	671
24.3	Project stage-by-stage document	671
24.3.1	Project stage-by-stage document – content	671
24.3.2	Summary of work to be undertaken	672
24.3.3	High-level outline stage by stage	673
24.3.4	Detailed stage by stage	673
24.3.5	Summary	679
25	Data management	681
25.1	Data management – introduction	681
25.2	Data management – purpose	681
25.3	Data – range	681
