Preface	ix
1 Hydrogen storage and compression	1
1.1 Towards a hydrogen economy	1
1.2 Hydrogen – Thermo-physical properties	3
1.3 Hydrogen storage	7
1.3.1 Compressed hydrogen gas (CGH ₂)	7
1.3.2 Liquid hydrogen (LH ₂)	7
1.3.3 Solid storage of hydrogen (SSH ₂)	10
1.4 Hydrogen compressors	17
1.4.1 Mechanical compressors	18
1.4.2 Non-mechanical compressors	18
Acknowledgements	23
References	23
2 Power-to-Gas for energy system integration and storage	29
2.1 Summary of concept	29
2.1.1 Energy pathways in PtG	31
2.2 Benchmarking PtG to other energy storage technologies	33
2.2.1 Comparing PtG with other energy storage technologies	33
2.3 Summary of current commercialization and research activities	39
2.3.1 Methanation/RNG	39
2.3.2 Energy hubs and networks	41
2.3.3 System optimization and ancillary	42
2.3.4 Economic analysis of PtG systems	43
2.3.5 Cap-and-Trade	45
2.4 Summary	47
References	47
3 Methanation for Power-to-Gas applications	53
3.1 Methanation for Power-to-Gas applications	53
3.2 Current research activities	54
3.3 Development of electrolysis and methanation technologies for PtG	56
3.3.1 Development of electrolysis technologies	56
3.3.2 Development of catalytic methanation technologies	57

3.4	Commercialisation, regulator and commercial outlook in Germany	60
3.4.1	Commercialisation in Germany	60
3.4.2	Regulation in Germany	60
3.4.3	Commercial outlook in Germany	60
3.5	Symbols and abbreviations	61
	References	61
4	Production of hydrogen from methane decarbonization into Power-to-Gas scenarios	67
4.1	Introduction	67
4.2	Natural gas decarbonization	70
4.3	Status of the technology	71
4.4	Introduction of methane decarbonization into PtG	73
4.4.1	Methane decarbonization upstream PtG	73
4.4.2	Methane decarbonization downstream PtG	74
4.5	Socioeconomic impact of methane decarbonization in PtG	76
4.6	Conclusion	77
	References	79
5	Power-to-Gas in an ancillary service market	81
5.1	Introduction	81
5.2	Ancillary services: motivation	82
5.3	PtG energy hubs in the ancillary services market	84
5.4	Multiservice PtG energy hub model	85
5.5	Mixed integer linear programming problem formulation	87
5.6	Results	90
5.7	Conclusions	100
	References	101
6	Methane in MOFs: where, why, and how	105
6.1	Introduction	105
6.2	Identification of adsorption sites	106
6.3	Evaluation of adsorption sites	112
6.4	Outlook and future directions	118
	Acknowledgment	120
	References	120
7	Thermal management as a key in storing adsorbed natural gas	125
7.1	Introduction	125
7.2	Adsorption thermodynamics	127
7.3	Thermal management approaches	129
7.3.1	Increasing thermal capacity of the ANG storage system	129
7.3.2	Increasing thermal conductivity of the ANG storage system	130
7.3.3	Using a heat exchanger configuration	131
7.4	Conclusion	134
	References	134

8	Gas hydrate potential and development for methane storage	137
8.1	Introduction	137
8.2	Properties and composition of gas hydrates	139
8.3	Brief history of gas hydrates	140
8.4	Location of gas hydrate deposits	141
8.5	Indian gas hydrate scenario	141
8.6	Recovery of gas hydrates	146
8.7	Environmental impacts and challenges	147
8.8	Using hydrates for methane storage	148
8.9	Future perspective and conclusion	149
	Acknowledgment	150
	References	150
	Index	155
