<b>Foreword</b>	<b>xv</b>
<b>Preface</b>	<b>xvii</b>
<b>Part I How we arrived at where we are?</b>	<b>1</b>
<b>1 Market developments</b>	<b>3</b>
1.1 Industry in transition	3
1.2 Impact of developments	4
1.3 Emission targets	5
1.4 Unbundling	7
1.5 Implementing generation competition	9
1.6 Rationale for market development	11
1.7 Establishing competition	12
1.8 Facilitating demand side involvement	13
1.9 Establishing the optimum level of generation capacity	15
1.10 Plant mix	17
1.11 Regulatory response	17
1.12 Electricity market reform the United Kingdom	18
1.13 Irish I-SEM	19
1.14 Lessons learnt	19
1.15 Conclusions	20
<b>2 Market technical challenges</b>	<b>23</b>
2.1 Introduction	23
2.2 Emission reduction and plant mix	24
2.3 Demand prediction and reserve	26
2.4 Intermittency and curtailment	27
2.5 Renewable capacity contribution	28
2.6 Impact on conventional generation	29
2.7 System inertia and frequency control	31
2.8 Impact of electric vehicles on system	32
2.9 Distribution challenges	35
2.10 Interconnection and loop flows	36
2.11 The implication to networks	38
2.12 Conclusions	39

<b>3</b>	<b>Impact of developments on market players</b>	<b>41</b>
3.1	Introduction	41
3.2	Impact on generation utilisation	42
3.3	The impact on generation companies	44
3.4	Active distribution networks	46
3.5	Transmission utilisation	47
3.6	Low carbon generation funding	47
3.7	Impact on consumers of subsidies	48
3.8	Total subsidy costs 2030	49
3.9	Impact on technology type	51
3.10	Security of supply	51
3.11	Conclusions	54
<b>Part II</b>	<b>Review of low carbon generation technology options</b>	<b>57</b>
<b>4</b>	<b>Emissions and renewable generation</b>	<b>59</b>
4.1	Progress on global emission reduction	59
4.2	Impact of managing intermittency on generation emissions	61
4.3	Modelling operation with intermittency	62
4.4	Impact on generation loading	64
4.5	Curtailed renewable output	65
4.6	Evaluating wind installations	66
4.7	Biomass	70
4.8	Waste to energy	71
4.9	Solar	71
4.10	Displacing coal with gas	74
4.11	Economic comparisons	74
4.12	Optimal mix of low carbon generation	77
4.13	Conclusions	78
<b>5</b>	<b>Embedded generation issues</b>	<b>81</b>
5.1	Cause of growth	81
5.2	Network charges	82
5.3	Impact on network management	84
5.4	Industrial cogeneration complex	84
5.5	Micro-CHP	87
5.6	Diesel generation emissions	88
5.7	Economic comparison of large-scale vs embedded	89
5.8	EU perspective	92
5.9	Distribution security	93
5.10	Conclusions	94
<b>6</b>	<b>Nuclear option</b>	<b>97</b>
6.1	The case for nuclear	97
6.2	Nuclear generation in China	98
6.3	Large-scale nuclear costs	99

6.4	Consumer costs of nuclear	101
6.5	Operating environment of nuclear	102
6.6	Small modular nuclear	103
6.7	Nuclear fusion	105
6.8	Prospects for nuclear	106
6.9	Optimal plant mix	107
6.10	Conclusions	109
<b>7</b>	<b>Carbon capture and storage</b>	<b>113</b>
7.1	The process	113
7.2	Design options	113
7.3	CCS economics	116
7.4	Operational schemes	119
7.5	The case for CCS	122
7.6	Conclusions	123
<b>Part III</b>	<b>How are the changes being managed within a market environment?</b>	<b>125</b>
<b>8</b>	<b>Wholesale markets</b>	<b>127</b>
8.1	Introduction	127
8.2	Market challenges	128
8.3	Renewable support schemes	129
8.4	Small-scale subsidies	131
8.5	Market performance improvement	132
8.6	Single-buyer models	133
8.7	A model for 2030	135
8.8	Availability payments	137
8.9	Renewable generation impact	139
8.10	Impact of renewable generation on market prices	140
8.11	Regulatory initiatives	141
8.12	Dispatch process	142
8.13	Impact of CO <sub>2</sub> charges	143
8.14	Conclusions	147
<b>9</b>	<b>Balancing market</b>	<b>149</b>
9.1	Market process	149
9.2	Ancillary services	151
9.3	Reserve requirements	151
9.4	New sources of reserve	153
9.5	Short-term operating reserve procurement – STOR	154
9.6	Impact on reserve requirements due to intermittent renewable generation	156
9.7	Balancing market Germany	157
9.8	Balancing USA	159
9.9	Conclusions	159

<b>10 Capacity markets</b>	<b>163</b>
10.1 Regulation	163
10.2 Security analysis	164
10.3 Defining the capacity need	165
10.4 Wind generation contribution	166
10.5 Economic analysis	167
10.6 Capacity procurement	169
10.7 The impact of interconnection	169
10.8 Demand side regulation	171
10.9 Market mechanisms to realise capacity	172
10.10 Capacity market Ireland	173
10.11 Capacity market design – United Kingdom	174
10.12 Capacity auction results	175
10.13 US capacity auctions	176
10.14 Conclusions	177
<b>11 Cross-border trading</b>	<b>181</b>
11.1 Link benefits	181
11.2 Trading evaluation	182
11.3 Renewable energy exchange	184
11.4 Limits on renewable generation	185
11.5 European strategy	186
11.6 EU cross-border trading optimisation	188
11.7 Predicting cross-border flows	189
11.8 Cross-border trading auction	192
11.9 Conclusions	193
<b>12 Demand side management</b>	<b>195</b>
12.1 Scope	195
12.2 Impact of intermittency on needs	197
12.3 Pumped storage	198
12.4 Storage market operation	200
12.5 Battery storage for frequency control	201
12.6 Desalination	202
12.7 Domestic demand control	203
12.8 Aggregators	205
12.9 Electric vehicles	205
12.10 Industrial and commercial demand control	208
12.11 Conclusions	210
<b>13 Emissions and interaction with heat, transport and gas</b>	<b>213</b>
13.1 Global energy utilisation and emissions	213
13.2 Target emission reduction by sector	214
13.3 Heat pumps	217
13.4 District heating	219

13.5	Electric vehicles	220
13.6	Power to gas	223
13.7	Combined heat and power	223
13.8	Implications to electricity demand of meeting emission targets	225
13.9	Integrated control of transport, heat and electricity	227
13.10	Conclusions	230
<b>14</b>	<b>Network issues and tariffs</b>	<b>233</b>
14.1	Introduction	233
14.2	Change drivers	234
14.3	Distribution loading	235
14.4	Security issues	236
14.5	System development	238
14.6	Retail total charges	239
14.7	Distribution network charging methodology	240
14.8	Distribution UoS tariff structures	241
14.9	End-user charges	243
14.10	Transmission UoS tariffs	243
14.11	Transmission charging United Kingdom	247
14.12	Distribution microgrids	247
14.13	Conclusions	249
<b>Part IV</b>	<b>How do we get to where we want to be?</b>	<b>251</b>
<b>15</b>	<b>Developing future scenarios</b>	<b>253</b>
15.1	Objectives	253
15.2	Policy options	254
15.3	Key variables	255
15.4	Typical scenarios	256
15.5	Risk assessment	258
15.6	Development constraints	260
15.7	External potential developments	261
15.8	Security analysis	263
15.9	Conclusions	265
<b>16</b>	<b>Scenario and risk evaluation</b>	<b>269</b>
16.1	Objective	269
16.2	Methodology	270
16.3	Total costs	271
16.4	Initial LP data assumptions	272
16.5	LP studies	273
16.6	LP sensitivities	275
16.7	Data assumptions in detailed model	277
16.8	Detailed model results	278
16.9	Model sensitivities	279

16.10	Comparison of model and LP	282
16.11	Risk analysis	283
16.12	Conclusions	285
<b>17</b>	<b>Trading in an uncertain environment</b>	<b>287</b>
17.1	Trading options	287
17.2	Trading process	288
17.3	Data forecasts	289
17.4	System dispatch	291
17.5	Value at risk	293
17.6	Arbitrage spark spread	294
17.7	Statistical forecasting	296
17.8	Optimum day-ahead bid	297
17.9	Part load operation	299
17.10	Conclusions	300
<b>18</b>	<b>Smart flexible grids</b>	<b>303</b>
18.1	Introduction	303
18.2	Policy and regulation	304
18.3	How can smart grids help?	305
18.4	The storage option to level demand	307
18.5	Smart domestic customers	308
18.6	Demand with EVs	309
18.7	Longer term national demand profiles	310
18.8	Interconnection trading	312
18.9	Flexibility using gas-fired generation	312
18.10	Power to gas	314
18.11	Demand scheduling and dispatch	314
18.12	Smart grid control and markets	315
18.13	Smart grid projects in Europe	316
18.14	Sponsors	318
18.15	Changing roles	319
18.16	Conclusions	321
<b>19</b>	<b>Optimum development strategy</b>	<b>323</b>
19.1	Transformation	323
19.2	Plant mix development	324
19.3	Interaction with transport and heat	327
19.4	Market mechanisms	327
19.5	Flexibility	329
19.6	Trading process	331
19.7	Network development	333
19.8	Governance	333
19.9	Open system models	335
19.10	Market-based models	336

19.11	Functionality required	337
19.12	Development timescales	338
19.13	Conclusions	339
<b>20</b>	<b>Key findings</b>	<b>341</b>
20.1	Drivers of change	341
20.2	Technical challenges	342
20.3	Impact on market players	343
20.4	Impact of renewable generation	345
20.5	Embedded generation issues	346
20.6	The nuclear option	347
20.7	Carbon capture and storage	348
20.8	Wholesale markets	349
20.9	Balancing markets	350
20.10	Capacity markets	351
20.11	Interconnection	353
20.12	Demand side management	354
20.13	Interaction with gas, heat and transport	355
20.14	Network issues	356
20.15	Future scenarios	358
20.16	Scenario evaluation	360
20.17	Trading in an uncertain environment	361
20.18	Smart grids development	362
20.19	Optimum development strategy	363
<b>Appendix</b>	<b>Conversion tables</b>	<b>365</b>
	<b>Answers</b>	<b>367</b>
	<b>Glossary</b>	<b>375</b>
	<b>Bibliography</b>	<b>381</b>
	<b>Index</b>	<b>383</b>
