About the editor	ix
Authors' biographies	xi
Preface	xxiii
List of acronyms	xxvii
1 Market position of PERC silicon solar cells	1
<i>Jozef Poortmans and Ali Hajjiah</i>	
1.1 Photovoltaics makes a lot of economical sense	1
1.2 Photovoltaics, a rapidly growing market	2
1.3 PV technologies portfolio	7
2 Introduction to surface passivation of industrial crystalline silicon solar cells	19
<i>Armin G. Aberle</i>	
3 Material properties of AlO_x for silicon surface passivation	27
<i>Bram Hoex</i>	
3.1 Introduction	27
3.2 Surface recombination fundamentals	27
3.3 Electronic properties of the c-Si/ Al_2O_3 interface	29
3.4 Atomic composition of the c-Si/ Al_2O_3 interface and its relation to its electronic properties	32
3.5 Long-term stability of the silicon surface passivation by Al_2O_3	35
3.6 Conclusion	36
4 Material properties of Al_2O_3 grown on Si: interface trap density (D_{it}) and fixed charge density (Q_f)	41
<i>Bart Vermang and Hans Gerverde</i>	
4.1 Theoretical preface	41
4.2 Al_2O_3 material properties	42
4.3 Epilog	47

5	PECVD-AlO_x	51
	<i>Pierre Saint-Cast and Marc Hofmann</i>	
5.1	Introduction	51
5.2	Plasma and layer characteristics of MW-PECVD	52
5.3	Plasma and layer characteristics of ICP-PECVD	60
5.4	Performance comparison with other techniques (P&M)	68
6	Atmospheric pressure chemical vapor deposition of aluminum oxide for silicon surface passivation—background and materials science	73
	<i>Kristopher O. Davis</i>	
6.1	Background on atmospheric pressure chemical vapor deposition	73
6.2	Composition and structure of the APCVD Al_2O_3 –Si interface	75
7	Al_2O_3 by atmospheric pressure chemical vapour deposition	81
	<i>Lachlan E. Black</i>	
8	Surface passivation of industrial PERC solar cells	95
	<i>Thorsten Dullweber and Jan Schmidt</i>	
8.1	Introduction	95
8.2	Brief historical review	96
8.3	Emitter passivation	101
8.4	Rear passivation technologies	103
8.5	Local aluminum rear contacts	108
8.6	Industrial PERC process flows	113
8.7	Outlook	116
9	Al_2O_3 passivation in industrial solar cells: n-PERT	127
	<i>Emanuele Cornagliotti</i>	
9.1	History of n-PERT solar cells	127
9.2	Al_2O_3 passivation for n-PERT cells	129
9.3	Conclusions	135
10	Double-layer dielectric stacks for advanced surface passivation of crystalline silicon solar cells	143
	<i>Shubham Duttagupta and Armin Gerhard Aberle</i>	
10.1	Introduction	143
10.2	Deposition of PECVD $\text{SiO}_x/\text{SiN}_x$ and $\text{AlO}_x/\text{SiN}_x$ stacks	145
10.3	Characterisation of surface passivation	146
10.4	Investigation of moderately doped p -type silicon surfaces	150
10.5	Investigation on heavily doped p^+ silicon surface	159
10.6	Industrial Al-LBSF (or PERC) solar cells	164
10.7	Summary and conclusions	167

11 Hydrogenated amorphous silicon nitride (a-SiN_x:H) as surface passivation layer	179
<i>Machteld Lamers and Arthur Weeber</i>	
11.1 Introduction	179
11.2 Surface-passivating properties related to bond structure	181
11.3 Effect of nitridation of the interface	184
11.4 <i>Ab initio</i> studies	189
11.5 Surface-passivating effect of a-SiN _x :H layers onto different solar cell architectures	191
11.6 Conclusions	193
12 Microwave PE CVD reactor and process for industrial high throughput fabrication of aluminum oxide layers for solar cell applications	197
<i>Hermann Schlemm, Hans-Peter Sperlich, Gunnar Köhler, Thomas Große and Egbert Vetter</i>	
12.1 Introduction	197
12.2 PE CVD reactor development leading to high throughput tools	198
12.3 Experimental results	211
12.4 Summary	213
13 Spatial atomic layer deposition of Al₂O₃: Levitrack, a one-pass ALD system with throughputs exceeding 6,000 wafers/h	217
<i>Ernst Granneman and Wil van Velzen</i>	
13.1 Introduction	217
13.2 High-level system specs	219
13.3 Levitrack system	220
13.4 Basic wafer transport theory	221
13.5 Comparison with experimental results	226
13.6 Lateral stability	228
13.7 Throughput enhancement	229
13.8 Spatial ALD process results	232
13.9 Conclusions	234
14 Spatial Al₂O₃ ALD: from Lab to Fab	237
<i>Roger Görtzen</i>	
14.1 Time-based versus spatial	237
14.2 Proof of principle spatial ALD	238
14.3 Spatial ALD application	239
14.4 From the proof of principle to InPassion [®] LAB	240
14.5 Transform from Lab to Fab— InPassion [®] ALD	242
14.6 Second generation—InPassion [®] ALD	242
14.7 Combining the stack layers	244
