Preface to the second edition	xiii
Acknowledgements	xv
Diagrammatic symbols	xvii
Abbreviations and terms used in this book	xviii
1 The basics of steam generation and use	1
<i>David Lindsley</i>	
1.1 Why an understanding of steam is needed	1
1.2 Boiling: the change of state from water to steam	1
1.3 The nature of steam	3
1.3.1 The Carnot cycle	4
1.3.2 The Rankine cycle	6
1.4 Thermal efficiency	8
1.5 The gas turbine and combined-cycle plants	8
1.6 Summary	10
Reference	10
2 The steam and water circuits	11
<i>David Lindsley and Don Parker</i>	
2.1 Steam generation and use	11
2.2 Drum boilers and HRSGs	11
2.3 Once-through boilers and OTSGs	13
2.4 The steam turbine	15
2.5 The condensate and feedwater system	19
2.5.1 The deaerator	19
2.6 The feed pumps and valves	21
2.7 The water and steam circuits of HRSG plant	21
2.8 Summary	23
3 The fuel, air and flue-gas circuits	25
<i>David Lindsley and John Grist</i>	
3.1 The furnace	25
3.1.1 Firing arrangements and burners	26
3.1.2 Wall-fired boilers and wall burners	26
3.1.3 Corner-fired boilers and tilting burners	27

3.1.4	Downshot (also down-fired or W-fired) boilers and their burners	28
3.1.5	OFA and boosted OFA	30
3.2	The air and gas circuits	31
3.2.1	The air heater	31
3.2.2	Types of fan	33
3.2.3	Final elements for draught control	37
3.3	Fuel systems	39
3.3.1	Coal firing (PF)	39
3.3.2	Waste-to-energy plants	51
3.4	Igniter systems	56
3.5	Burner management systems	56
3.5.1	Furnace purge and fuel oil leak tests	58
3.5.2	Starting the oil burners	59
3.5.3	Starting and stopping a mill	60
3.5.4	Fuel oil trip	61
3.5.5	Master fuel trip	61
3.5.6	Boiler trip	61
3.5.7	Special considerations for external plant	62
3.5.8	Special considerations for downshot or W-fired boilers	62
3.6	Ancillary systems	62
3.7	Gas turbines in combined-cycle applications	65
3.8	Summary	65
	Reference	65
4	Setting the demand for the steam generator	67
	<i>David Lindsley and Don Parker</i>	
4.1	Nature of the demand	67
4.2	Setting the demand in power station applications	68
4.2.1	Operation of the UK electricity trading system	69
4.2.2	Frequency response services	70
4.3	The master demand in a power station application	71
4.3.1	Boiler-following operation	71
4.3.2	Turbine-following operation	72
4.3.3	Coordinated unit control	73
4.3.4	Relative performance	74
4.4	Load demand in CHP plants	76
4.5	WTE plants	77
4.6	Heat recovery steam generators	78
4.7	Summary	79
5	Combustion and draught control	81
	<i>David Lindsley and John Grist</i>	
	Part 1: Control	81

5.1	The principles of combustion control	81
5.1.1	Cross-limited control	83
5.1.2	Multiple fuel sources	90
5.2	Working with multiple fuels	90
5.3	The control of mills or pulverisers	93
5.3.1	The 'load line'	93
5.3.2	Mill control strategies	94
5.3.3	Fuel quality factor	95
5.3.4	Mill temperature control	96
5.3.5	Controlling multiple mills and multiple fuels	99
5.4	Air distribution and pressure control	102
5.5	NO _x control	103
5.6	Maintaining the furnace draught	106
5.7	Cross-over pressure control	108
5.8	Binary control of the combustion system	110
5.8.1	Burner management systems (BMS) and plant safety	110
5.8.2	Sequence controls	110
Part 2:	Instrumentation	111
5.9	Furnace instrumentation	111
5.9.1	CCTV systems	111
5.9.2	Acoustic leak detection	112
5.9.3	Flame monitoring and purge air requirements	114
5.9.4	The requirements for purge air	118
5.10	Oil (and gas) flow instrumentation	119
5.11	Air flow	120
5.11.1	Venturi	120
5.11.2	Aerofoil	120
5.11.3	Thermal mass flow	121
5.11.4	Capacitance/cross-correlation	123
5.11.5	Averaging Pitot tube system	125
5.12	Flue gas analysis	128
5.12.1	Oxygen and CO analysers	128
5.12.2	NO _x measurements	129
5.12.3	Continuous emission monitoring systems	130
5.13	Mill and silo fire detection and penthouse monitoring	131
5.14	CIA measurements	133
5.15	Summary	134
	References	134
6	Feedwater control and instrumentation	135
	<i>David Lindsley and John Grist</i>	
Part 1:	controls	135
6.1	Drum level and feedwater control	135
6.2	One, two, three and four-element control	135

6.2.1	Two-element feedwater control	137
6.2.2	Three-element feedwater control	139
6.2.3	Four-element level control	141
6.3	Feedwater valve control	144
6.4	Storage vessel-level control in a once-through boiler	145
6.5	Once-through super critical additional systems	150
6.5.1	Sub-cooling line	150
6.5.2	Economiser vent line	152
6.6	Basic enthalpy control	152
6.6.1	Enthalpy control process considerations	152
6.6.2	Enthalpy control logic considerations	154
6.7	Deaerator control	154
6.7.1	Steam pressure control	154
6.7.2	Level control	155
6.7.3	Integrated-level control	156
Part 2:	feedwater instrumentation and control mechanisms	157
6.8	Measuring and displaying the drum level, steam and feed flows	157
6.8.1	Some words of caution	158
6.8.2	Using an external water column	159
6.8.3	Statutory requirements	161
6.8.4	Discrepancies between drum-level indications	161
6.8.5	Drum-level gauges	162
6.9	Feed-flow measurement	164
6.10	Steam flow measurement	164
6.11	The mechanisms used for feedwater control	165
6.11.1	Valves	165
6.11.2	Quick opening	166
6.11.3	Linear	166
6.11.4	Equal percentage	167
6.11.5	The valve sizing coefficient	168
6.11.6	Fail-safe operation	168
6.11.7	Selecting the valve size	168
6.11.8	Specialised valve trims	169
6.12	Pumps	171
6.12.1	Variable-speed pumps	171
6.12.2	Pump controls	173
6.12.3	Boiler circulation pumps	173
6.13	Summary	175
7	Steam temperature control and measurement	177
	<i>David Lindsley and John Grist</i>	
7.1	Why steam temperature control is needed	177
7.2	The spray water attemperator	178
7.2.1	The mechanically atomised attemperator	179

7.2.2	The variable area attemperator	180
7.2.3	The variable annulus desuperheater	180
7.2.4	Other types of attemperator	181
7.2.5	Radial discharge mechanically atomised attemperators	181
7.2.6	Location of temperature sensors	183
7.2.7	Control systems for spray water attemperators	183
7.3	Advanced steam temperature control	188
7.3.1	Two-loop control	189
7.3.2	State controller with observer	191
7.4	Controlling the temperature of reheated steam	193
7.4.1	Reheat sprays	193
7.4.2	Gas pass biasing dampers	193
7.4.3	Temperature control with tilting burners	195
7.4.4	Flue gas recycling	195
7.4.5	Hot air injection	197
7.5	Temperature measurement	197
7.5.1	Measurement of air and flue gas temperature	197
7.5.2	Measurement of steam temperature	198
7.5.3	Measurement of metal temperature	198
7.6	Summary	201
8	Control equipment practice	203
	<i>David Lindsley and John Grist</i>	
8.1	A typical DCS configuration	203
8.1.1	The central system cabinets	203
8.1.2	Termination and marshalling	207
8.1.3	Operator workstations	208
8.2	Interconnections between the systems	211
8.3	Equipment selection and environment	211
8.4	Mechanical factors and ergonomics	212
8.4.1	Site considerations	212
8.5	Electric actuators	220
8.6	Hydraulic actuators	221
8.7	Cabling	224
8.7.1	Summary	224
8.7.2	Fire-resistant, fire-retardant and low-smoke cables	224
8.8	Electromagnetic compatibility	226
8.8.1	Earth connections	226
8.8.2	Cables: armouring screening and glands	228
8.9	Database tools	230
8.10	Reliability of systems	234
8.10.1	Analysing the effects of failure	236
8.11	Summary	238
	References	238

9 Requirements definition and equipment nomenclature **239**
David Lindsley and Don Parker

9.1	Overview	239
9.2	Defining the requirements	239
9.2.1	The Project Plan	240
9.2.2	System descriptions	240
9.2.3	The Functional Design Specification	240
9.2.4	The Technical Specification	241
9.2.5	Design of functional safety systems and related boiler control logic	243
9.2.6	Testing requirements	243
9.2.7	Making provision for site tests	244
9.2.8	Vendor documentation systems	245
9.3	The KKS equipment identification system	246
9.3.1	The importance of agreement and coordination	247
9.3.2	Review of KKS	248
9.3.3	An example of how the codes are used	252
9.4	Summary	253
	References	253

10 Functional safety and associated reviews for boiler protection and control systems **255**
John Grist

10.1	Introduction	255
10.2	Background	256
10.3	Basis of design: basis of safety	256
10.4	Process HAZID study	257
10.5	P&ID review meeting	257
10.6	Hazardous area classification	258
10.7	HAZOP	259
10.8	Determination of safety integrity level (SIL)	260
10.9	Project liaison meetings	262
10.10	Demonstration of SIL achieved	263
10.11	Implosion studies	263
10.12	Factory acceptance tests	265
10.12.1	Hardware testing	265
10.12.2	Software testing	265
10.12.3	Graphics	269
10.13	Audits	270
10.14	Final checks	270
10.15	Non-C&I-related safety reviews	270
10.16	Operations and maintenance personnel training	270
10.17	Ongoing site activities and reviews	271

11 Improving plant automation and operational flexibility	273
<i>Don Parker</i>	
11.1 Features of highly automated power plant	273
11.2 Features of operationally flexible plant	274
11.3 Benefits of highly automated plant	274
11.4 Design principles for high-level automation	275
11.4.1 Hierarchical sequence design	275
11.4.2 Extensive plant self-protection and situation recovery control actions	277
11.4.3 Improving modulating controls design	277
11.5 Boiler–turbine coordination: control design for operational flexibility	280
11.5.1 Understanding boiler and turbine steam dynamic responses	280
11.5.2 Coordinated modes for MW control	283
11.5.3 Coordinated Turbine Following	283
11.5.4 Unit Coordinated (also referred to as C-BF) mode	283
11.5.5 Components of the Unit Coordinated controls	284
11.5.6 Frequency response	288
11.5.7 Capability limits and runbacks	289
11.6 Summary	290
References	290
12 Upgrading and refurbishing systems	293
<i>David Lindsley and Don Parker</i>	
12.1 Drivers for change	293
12.2 The DCS upgrade cycle	294
12.3 The impact of change	296
12.3.1 Operators	296
12.3.2 Maintenance	298
12.3.3 Cyber security	299
12.3.4 Corporate expectations	299
12.4 Refurbishment case studies	300
12.4.1 Multi-phase to DCS	300
12.4.2 DCS HMI upgrade	302
12.4.3 Complete DCS replacement	303
12.4.4 ‘Transparent’ control system migration	304
12.5 Preparing for change	304
12.5.1 Making the business case	304
12.5.2 Technical preparations	305
12.6 Implementing the project	308
12.7 Keeping track of system reliability and costs	309

xii *Thermal power plant control and instrumentation*

12.8	Change management	310
12.9	Summary	311
12.10	Conclusion	311
	References	311

Index	313
