<b>Foreword</b>	<b>xiii</b>
<b>Acknowledgments</b>	<b>xvii</b>
<b>Notation</b>	<b>xix</b>
<b>About the Editors</b>	<b>xxi</b>
<b>1 Introduction to cognitive radar with an industrial point of view</b>	<b>1</b>
<i>A. Farina</i>	
1.1 Introduction	1
1.2 Why cognition in radar? The role of human operators and of a computer-based radar task scheduler	2
1.2.1 Use of the phased-array antenna in radar systems	5
1.2.2 Use of variable dwell time	5
1.2.3 Use of variable data rate	5
1.2.4 The system manager	6
1.3 To what extent can today's phased-array radars be considered cognitive?	15
1.4 What's next	16
1.5 Operational requirements	17
1.6 Enabling key technologies: just a taste	20
1.7 Adaptivity and brain	22
1.7.1 Brain ... few basic notions	22
1.8 Brain inspired radar design	26
1.9 Conclusion	29
Acknowledgments	31
References	32
<b>2 Cognitive radar inspired by the brain</b>	<b>37</b>
<i>Simon Haykin, Yanbo Xue, and Peyman Setoodeh</i>	
2.1 Introduction	37
2.2 Fuster's paradigm of cognition	39
2.3 Engineering perspective of cognition	40
2.4 Perception–action cycle	41
2.4.1 Bayesian filtering for optimal perception in the receiver	42
2.4.2 Shannon's entropy vs. Fisher information	45
2.4.3 Posterior Cramér–Rao lower bound	46

2.4.4	Sensitivity analysis	48
2.4.5	Dynamic programming for control in the transmitter	49
2.5	Memory	51
2.5.1	Perceptual memory	51
2.5.2	Executive memory	51
2.5.3	Working memory	52
2.6	Attention	53
2.7	Intelligence	54
2.8	Cyclic-directed information flow	55
2.8.1	Perceptual pathway	55
2.8.2	Executive pathway	56
2.8.3	How can we build on the directed information-flow graph to better understand the role of memory in cognition?	57
2.9	Experimental groundwork	58
2.9.1	State-space model	58
2.9.2	Construction of the two libraries	60
2.9.3	Performance metric	60
2.9.4	Track initialization	61
2.9.5	Memory	61
2.10	Experimental results: theoretical considerations	62
2.10.1	Posterior Cramér–Rao lower bound	62
2.10.2	Tracking accuracy	63
2.11	Experimental results: practical considerations	67
2.12	Conclusion	68
	References	69
<b>3</b>	<b>Cognitive radar and its application to CFAR detection and receiver adaptation</b>	<b>73</b>
	<i>A. De Maio, A. Farina, A. Aubry, V. Carotenuto, and L. Pallotta</i>	
3.1	Introduction	73
3.2	Existing examples of cognitive properties in modern radars	77
3.3	Cognitive CFAR-processing techniques	77
3.4	Exploiting multiple a priori spectral models for detection	82
3.5	Selected reference list on cognitive radar	87
3.6	Conclusion	88
	References	89
<b>4</b>	<b>Cognitive radar waveform design for spectral compatibility</b>	<b>93</b>
	<i>A. De Maio, A. Farina, A. Aubry, V. Carotenuto, and L. Pallotta</i>	
4.1	Introduction	93
4.2	System and problem formulation	95
4.2.1	System model	95
4.2.2	Code design optimization formulation	97

4.2.3	Cognitive spectrum awareness	98
4.3	Solution algorithm and performance analysis	99
4.3.1	Local design solution technique	102
4.4	Conclusion	106
	Appendix A	107
A.1	Waveform design algorithm for global interference requirements	107
A.2	Waveform design algorithm for local interference requirements	109
	References	112
<b>5</b>	<b>Cognitive optimization of the transmitter–receiver pair</b>	<b>115</b>
	<i>A. De Maio, A. Farina, A. Aubry, V. Carotenuto, and L. Pallotta</i>	
5.1	Introduction	115
5.2	System model and problem formulation	118
5.2.1	System model	118
5.2.2	The role of cognition for environmental awareness	119
5.2.3	Code and receive filter bank optimization problem formulation	122
5.3	Joint transmit receive design: solution-technique and analysis	124
5.3.1	Performance analysis	125
5.4	Conclusion	132
	Appendix A	133
	Alternating optimization procedure to jointly design transmit signal and receive filter bank	133
A.1	Filter bank optimization: solution to problem $\mathcal{P}_w^{(n)}$	135
A.2	Radar code optimization: solution to problem $\mathcal{P}_s^{(n)}$	135
A.3	Transmit–receive system design: optimization procedure	136
	References	137
<b>6</b>	<b>Cognitive control theory with an application</b>	<b>141</b>
	<i>Mehdi Fatemi and Simon Haykin</i>	
6.1	Introduction	141
6.2	The two-state model	142
6.3	Formalism of the learning process in cognitive control	143
6.4	Cognitive-control-learning algorithm viewed as a special case of Bellman’s dynamic programming	146
6.5	Optimality vs. convergence-rate in online implementation	149
6.6	Formalism of the planning process in cognitive control	149
6.6.1	Predicting the entropic reward in a Gaussian environment	149
6.7	Structural composition of the cognitive controller	152
6.8	Computational experiment: cognitive-tracking radar	153
6.8.1	Scenario 1: the impact of planning on cognitive control	154
6.8.2	Scenario 2: comparison of learning curves of three different cognitive controllers	155

x	<i>The impact of cognition on radar technology</i>	
6.9	Conclusion	157
6.9.1	Cognitive processing of information	157
6.9.2	Linearity, convergence, and optimality	158
6.9.3	Engineering application	158
	Appendix A	158
	References	160
<b>7</b>	<b>Cognition in radar target tracking</b>	<b>163</b>
	<i>A. De Maio, A. Farina, A. Aubry, V. Carotenuto, and L. Pallotta</i>	
7.1	Introduction	163
7.2	Cognitive multitarget tracking system	164
7.2.1	General architecture of the tracking filter	165
7.2.2	Cognitive tracker architecture	169
7.3	Waveform selection for target tracking	173
7.3.1	Waveform scheduling strategy	177
7.3.2	Case study	179
7.4	Conclusion	183
	References	184
<b>8</b>	<b>Anticipative target tracking with related study cases</b>	<b>187</b>
	<i>A. Farina</i>	
8.1	Introduction	187
8.1.1	Anticipative target tracking	188
8.1.2	The case of MH370	191
8.2	Coordination of fore-active control and optimal guidance law for an interceptor study case	192
8.2.1	List of symbols	193
8.2.2	Introduction	193
8.2.3	Theoretical framework	194
8.2.4	Case study	197
8.2.5	Simulation results	198
8.2.6	Discussion	202
8.3	Conclusion	203
	References	205
<b>9</b>	<b>An overview on the exploitation of cognition in MIMO radar, electronic warfare, and synthetic aperture radar</b>	<b>209</b>
	<i>A. Aubry, V. Carotenuto, A. De Maio, A. Farina, G. Fornaro, L. Pallotta, and A. Pauciullo</i>	
9.1	Introduction	209
9.2	Cognitive MIMO radar beampattern shaping	210
9.3	Cognition in EW systems	216

9.4	Advanced concepts in SAR: exploitation of cognition	218
9.4.1	3D localization and monitoring of displacements with interferometry	220
9.4.2	SAR tomography and complex domain analysis of the scattering in multibaseline SAR	224
9.4.3	Knowledge-based and cognitive concepts in SAR	227
9.5	Conclusion	230

<b>10</b>	<b>A cross-disciplinary overview with potential application and examples for cognitive radar</b>	<b>237</b>
	<i>A. Farina</i>	
10.1	Introduction	237
10.2	From information to intelligence ... to exploit in cognitive radar	238
10.2.1	Birth certificate of the information age: the Annus Mirabilis 1948	238
10.2.2	Path forward to intelligence theory: perhaps!	240
10.3	Modeling everything with the new science of network	242
10.3.1	Some mathematical properties of networks	245
10.4	Bioinspired collective processing	254
10.4.1	Potential applications to cognitive radar	254
10.5	Mirror neurons: one of the most exciting events in neuroscience. Does it matter to cognitive radar?	256
10.5.1	Who discovered the mirror neuron phenomenon?	257
10.5.2	Potential impact of research on adaptive radar signal processing	257
10.6	Additional recent researchers on neurosciences	258
10.7	Memristors: the missing fourth element of circuits	259
10.7.1	Potential modeling of synapse and axon via memristors	260
10.8	The cybersecurity issue of a radar network	261
10.9	Conclusion	262
