<b>1</b>	<b>The road to 5G – visions and challenges</b>	<b>1</b>
<i>Angeliki Alexiou</i>		
1.1	A vision for 5G (in a nutshell)	1
1.2	Key disruptive system concept trends	3
1.3	Performance limitations, new design principles, and three paradigm shifts	4
1.4	Critical usage scenarios in 5G	8
1.4.1	Crowded local access	9
1.4.2	Bursty IoT	9
1.4.3	Ultra-reliable and low latency communications	9
1.5	This book: motivation and structure	10
References		14
<b>2</b>	<b>New 5G air interface: challenges for efficient multi-service coexistence for 5G below 6 GHz</b>	<b>17</b>
<i>Frank Schaich, Salah El Ayoubi, Berna Sayrac, Gerhard Wunder, Martin Schubert and Andreas Georgakopoulos</i>		
2.1	Introduction	18
2.1.1	Chapter contributions	19
2.2	Core services and their associated KPIs	19
2.2.1	Core services	19
2.2.2	Key performance indicators	21
2.2.3	KPI relevance to core services	23
2.3	Use cases from the 5G literature	23
2.3.1	Use cases from METIS/METIS-II projects	23
2.3.2	NGMN use cases	24
2.3.3	3GPP SMARTER SI use cases	26
2.4	The 5G use cases from FANTASTIC-5G	27
2.4.1	Detailed 5G use cases for RAN design	27
2.4.2	Selected FANTASTIC-5G use cases	27
2.5	Challenges for 5G design below 6 GHz	46
2.5.1	Design methodology	46
2.5.2	Service integration drivers	47
2.5.3	Link level challenges	48
2.5.4	System level challenges	50

2.6 System-level evaluation of technical components	50
2.7 Conclusions	52
Acknowledgement	53
References	53
<b>3 New quasi-deterministic approach to channel modeling in millimeter-wave bands</b>	<b>55</b>
<i>Alexander Maltsev, Andrey Pudeyev and Ilya Bolotin</i>	
3.1 Introduction	55
3.2 Q-D channel modeling approach	57
3.3 Millimeter-wave channel experimental measurements and results interpretation	58
3.3.1 Experimental measurement description and results	59
3.3.2 Experimental results interpretation	67
3.4 Quasi-deterministic approach for millimeter-wave channel modeling	73
3.4.1 General structure of Q-D channel model	74
3.4.2 Deterministic rays (D-rays) modeling	76
3.4.3 Statistical random rays (R-rays) modeling	83
3.4.4 Random reflection R-ray generation	84
3.4.5 Intra-cluster structure	84
3.4.6 Blockage modeling	86
3.4.7 Channel mobility modeling and impact	88
3.5 Q-D channel models implementation	90
3.5.1 University campus access channel model	91
3.5.2 Street canyon access channel model	93
3.5.3 Hotel lobby access channel model	94
3.5.4 Backhaul channel models	98
3.5.5 Device to device channel models	98
3.6 Conclusion	99
References	100
<b>4 Large-scale antenna systems</b>	<b>105</b>
<i>Christos Masouros and Adrian Garcia-Rodriguez</i>	
4.1 Promises and challenges of LSAS	106
4.1.1 LSAS promises	107
4.1.2 LSAS challenges	113
4.2 LSAS channel models and propagation aspects	122
4.2.1 Theoretical LSAS channel models	122
4.2.2 Mutual coupling characterisation	126
4.2.3 Measurement campaigns and LSAS-specific channel models	128
4.3 LSAS: system design and optimisation	128
4.3.1 Reduced RF-chain implementations	128
4.3.2 Energy efficiency optimisation	133
4.3.3 Network architectures and distributed LSAS	134

4.4 Concluding remarks	136

<b>5 Effects of densification and randomness of infrastructure deployment in cellular networks</b>	<b>147</b>
<i>Stelios Stefanatos, Antonis G., Gotsis and Angeliki Alexiou</i>	
5.1 Introduction	147
5.1.1 Infrastructure densification in future cellular networks	147
5.1.2 Analytical modeling of future cellular networks	148
5.1.3 Purpose and organization of the chapter	149
5.2 Review of homogeneous Poisson point processes	150
5.2.1 Fundamental properties	150
5.2.2 Computation of functionals	151
5.2.3 Conditioning, stationarity, and ergodicity	152
5.3 System model and performance metrics	154
5.3.1 System model	154
5.3.2 System performance metrics	157
5.3.3 AP–UE association schemes	160
5.4 SIR performance analysis	162
5.4.1 Fully loaded network: downlink	162
5.4.2 Fully loaded network: uplink	168
5.4.3 Lightly loaded network	171
5.5 User rate performance analysis	176
5.5.1 Degrees of freedom distribution	176
5.5.2 User rate CDF and system design issues	179
5.5.3 System design	181
5.6 Conclusion	185
Appendix A	186
A.1 Derivation of (5.18)	186
A.2 Derivation of (5.24)	188
References	188
<b>6 Wireless device-to-device (D2D) links for machine-to-machine (M2M) communication</b>	<b>193</b>
<i>Nuno K. Pratas and Petar Popovski</i>	
Abstract	193
6.1 Introduction	193
6.1.1 Key concepts in D2D communication	194
6.1.2 How can D2D help MTC?	195
6.1.3 Chapter organization	198
6.2 Underlay D2D links	198
6.2.1 Underlay signal model	199
6.2.2 Optimal underlay decoding	200
6.2.3 Sub-optimal underlay decoding	203

6.3	Underlay proximity discovery	204
6.3.1	Network-controlled proximity discovery overview	206
6.3.2	System model	207
6.3.3	Analysis	208
6.3.4	Numerical results and discussion	212
6.3.5	Remarks	213
6.4	Underlay direct communications	214
6.4.1	Analysis of topology A	214
6.4.2	Analysis of topology B	216
6.5	Conclusion	218
	Acknowledgements	219

<b>7</b>	<b>Caching in large wireless networks</b>	<b>223</b>
	<i>Georgios Paschos and Marios Kountouris</i>	
7.1	Introduction	223
7.2	Sustainable multihop wireless networks with caching	225
7.2.1	System model	225
7.2.2	Multihop capacity optimization: relaxation and rounding	227
7.2.3	Asymptotic laws for Zipf popularity	231
7.2.4	Scaling laws for constant cache size $K$	232
7.2.5	Scaling the cache size $K \rightarrow \infty$	233
7.2.6	Discussion about the sustainability of wireless caching networks	234
7.3	Cache-enabled small cell networks	235
7.3.1	Cache-enabled SCNs with local user interest correlation	235
7.3.2	D2D caching vs. small cell caching	242
7.4	Research challenges for wireless caching	253
7.4.1	Modelling the requests in wireless networks	253
7.4.2	Coded caching for broadcast medium exploitation	254
7.4.3	Cooperative caching models	255
7.4.4	Advanced spatial models	255
