Preface	xix
Acknowledgments	xxv
About the author	xxvii
1 Transceiver design	1
1.1 Frequency of operation	1
1.2 Transmitter	4
1.2.1 Transmitted effective isotropic radiated power	4
1.2.2 Power from the transmitter	5
1.2.3 Transmitter component losses	9
1.2.4 Transmitter line losses from the power amplifier to the antenna	10
1.2.5 Transmitter antenna gain	10
1.2.6 Transmitter antenna losses	12
1.3 The channel	13
1.3.1 Free-space attenuation	13
1.3.2 Propagation losses	14
1.3.3 Multipath losses	15
1.4 Receiver	15
1.4.1 Receiver antenna losses	15
1.4.2 Receiver antenna gain	16
1.4.3 Receiver line losses from the antenna to the LNA	17
1.4.4 Receiver component losses	17
1.4.5 Received signal power at the output to the LNA	19
1.4.6 Receiver implementation loss	19
1.4.7 Doppler effects on received signal	20
1.4.8 Received power for establishing the signal-to-noise ratio of a system	21
1.4.9 Received noise power	23
1.4.10 Noise figure	24
1.4.11 Received noise power at the detector	25
1.4.12 Receiver bandwidth	26
1.4.13 Received E_b/N_o at the detector	28
1.4.14 Receiver coding gain	28
1.4.15 Required E_b/N_o	28

1.5	The link budget	28
1.5.1	Spread spectrum systems	30
1.5.2	Process gain	30
1.5.3	Received power for establishing the signal-to-noise ratio for a spread spectrum system	30
1.5.4	Link budget example	31
1.5.5	Benefits of using a link budget	33
1.6	Summary	33
1.7	Problems	33
	Further reading	34
2	The transmitter	35
2.1	Basic functions of the transmitter	35
2.1.1	Transmit antenna	35
2.1.2	Transmit/receive device	36
2.1.3	RF power amplifier	37
2.1.4	Crest factor	38
2.1.5	Upconverter	39
2.1.6	Sum and difference frequencies generated in the upconversion process	40
2.2	Voltage standing wave ratio	42
2.2.1	Maximum power transfer principle	43
2.3	Analog and digital communications	44
2.3.1	Digital-versus-analog communications	46
2.3.2	Software programmable radios and cognitive radios	47
2.4	Digital modulation	47
2.4.1	Binary phase-shift keying	48
2.4.2	Quadrature phase-shift keying	50
2.4.3	Offset QPSK	52
2.4.4	Higher order PSK	52
2.4.5	BPSK versus QPSK constellation comparison	54
2.4.6	8-Level PSK	54
2.4.7	$\pi/4$ differential QPSK	56
2.4.8	16-Offset quadrature amplitude modulation	56
2.4.9	Phasor constellations and noise immunity	57
2.4.10	Continuous phase PSK	59
2.4.11	Summary of PSK modulations	64
2.4.12	Differential phase-shift keying	64
2.4.13	Minimum shift keying	68
2.4.14	Frequency-shift keying	68
2.4.15	Sidelobe reduction methods	71
2.4.16	Ideal shaping filter	71
2.5	Direct sequence spread spectrum	73
2.5.1	Frequency-hopping spread spectrum	73
2.5.2	Spread spectrum	74

2.5.3	Jammer resistance	75
2.5.4	Despreading to realize process gain in the spread spectrum system	76
2.5.5	Maximal length sequence codes	78
2.5.6	Maximal length PN code generator	80
2.5.7	Maximal length PN code taps	80
2.5.8	Gold codes	81
2.5.9	Other codes	82
2.5.10	Spectral lines in the frequency domain	82
2.6	Other forms of spread spectrum transmissions	83
2.6.1	Time hopping	84
2.6.2	Chirped-FM	84
2.7	Multiple users	85
2.7.1	Other methods for multiuser techniques	87
2.7.2	Orthogonal signals	87
2.7.3	Quadrature phase detection of two signals	88
2.7.4	Orthogonal frequency division multiplexing	89
2.7.5	Other OFDM techniques	91
2.8	Power control	91
2.9	Summary	92
2.10	Problems	93
	Further reading	94
3	The receiver	95
3.1	Superheterodyne receiver	95
3.2	Basic functions of the receiver	96
3.3	Receiver antenna	97
3.4	Transmit/receive device	97
3.5	Image reject filter	97
3.6	Low-noise amplifier	99
3.7	RF downconverter	100
3.8	Mixers	101
3.8.1	Mixer spur analysis—level of spurious responses and intermods	101
3.8.2	Sixth-order analysis	101
3.8.3	High-level or low-level mixers	103
3.8.4	High-side or low-side injection	103
3.9	Automatic gain control	105
3.10	IF downconverter	105
3.11	Splitting signals into multiple bands for processing	106
3.12	Bandwidth considerations	107
3.13	Phase noise	107
3.14	Filter characteristics	108
3.15	Group delay	109
3.16	Analog-to-digital converter	111

3.17	Sampling theorem and aliasing	113
3.18	Dynamic range/minimum detectable signal	115
3.19	Types of DR	117
3.19.1	Amplitude DR	117
3.19.2	Frequency DR	118
3.19.3	Single-tone frequency DR	119
3.19.4	Two-tone frequency DR	119
3.20	Second- and third-order intermodulation products	119
3.21	Calculating two-tone frequency DR	121
3.22	System DR	123
3.23	Sensitivity	125
3.24	Digital signal processor	126
3.25	Summary	126
3.26	Problems	127
	Further reading	127
4	AGC design and PLL comparison	129
4.1	AGC design	129
4.2	AGC amplifier curve	131
4.3	Linearizers	132
4.4	Detector	133
4.5	Loop filter	136
4.6	Threshold level	136
4.7	Integrator	136
4.8	Control theory analysis	138
4.8.1	AGC design example	142
4.9	Modulation frequency distortion	144
4.10	Comparison of the PLL and AGC using feedback analysis techniques	146
4.11	Basic PLL	146
4.12	Control-system analysis	147
4.13	Detector	148
4.14	Loop filter	148
4.15	Loop gain constant	148
4.16	Integrator	148
4.17	Conversion gain constant	149
4.18	Control theory analysis	149
4.19	Similarities between the AGC and the PLL	152
4.20	Feedback systems, oscillations, and stability	152
4.21	Summary	153
4.22	Problems	154
	Further reading	154
5	Demodulation	155
5.1	Carrier recovery for suppressed carrier removal	155
5.1.1	Squaring loop	156

5.1.2	Costas loop	159
5.1.3	Modified or hard-limited Costas loop and automatic frequency control addition	160
5.1.4	Decision-directed Costas loop	161
5.2	Demodulation process to remove spread spectrum code	163
5.2.1	Matched filter correlator	163
5.2.2	Sliding correlator	170
5.3	The eye pattern	175
5.4	Intersymbol interference	176
5.5	Symbol synchronizer	177
5.6	Digital processor	178
5.7	Scrambler/descrambler	179
5.8	Shannon's limit	179
5.9	Phase-shift detection	180
5.10	Summary	181
5.11	Problems	182
	Further reading	183
6	Basic probability and pulse theory	185
6.1	Basic probability concepts	185
6.2	The Gaussian process	186
6.3	Quantization and sampling errors	189
6.4	Probability of error	191
6.5	Error detection and correction	192
6.5.1	Error detection	193
6.5.2	Error detection using parity	193
6.5.3	Error detection using checksum	194
6.5.4	Error detection using CRC	195
6.5.5	Error correction	196
6.5.6	Error correction using redundancy	196
6.5.7	Forward error correction	197
6.5.8	Types of FEC	198
6.5.9	Interleaving	206
6.5.10	Viterbi decoder	207
6.5.11	Turbo and low-density parity check codes	207
6.6	Theory of pulse systems	211
6.7	PN code	213
6.8	Summary	214
6.9	Problems	215
	Further reading	215
7	Multipath	217
7.1	Basic types of multipath	218
7.2	Specular reflection on a smooth surface	218
7.3	Specular reflection on a rough surface	220
7.4	Diffuse reflection	221

7.5	Curvature of the earth	223
7.6	Pulse systems (radar)	223
7.7	Vector analysis approach	224
7.8	Multipath mitigation techniques	225
7.8.1	Antenna diversity	226
7.9	Summary	226
7.10	Problems	227
	Further reading	227
8	Improving the system against jammers	229
8.1	Unfriendly jammers	229
8.1.1	Spot jammer	229
8.1.2	Barrage jammer	230
8.1.3	Continuous wave (CW) jammer	231
8.1.4	Repeater jammer	232
8.1.5	Cognitive jammer	232
8.1.6	Burst or pulsed jammer	233
8.1.7	Capturing the AGC	234
8.2	Techniques to reduce jammers	234
8.2.1	Burst clamp	236
8.2.2	Adaptive filter	238
8.2.3	Gram–Schmidt orthogonalizer	250
8.2.4	Basic GSO	252
8.2.5	Adaptive GSO implementation	254
8.3	Intercept receiver comparison	256
8.4	Summary	258
8.5	Problems	259
	Further reading	259
9	Cognitive systems	261
9.1	The environment	261
9.1.1	Jammers	261
9.1.2	Channel degradation	263
9.2	Cognitive capabilities	263
9.2.1	Dynamic spectrum access	264
9.2.2	Adaptive power/gain control	266
9.2.3	Cognitive techniques using modulation waveforms	274
9.2.4	Spread spectrum SS for increased process gain against jammers	275
9.2.5	Adaptive error correction	277
9.2.6	Adaptive filter for jammer mitigation	277
9.2.7	Dynamic antenna techniques using AESAs	279
9.2.8	Antenna angle	281
9.2.9	Multiple antennas	283
9.2.10	Network configurations	284
9.2.11	Cognitive MANET networks	285

9.3	Cognitive system solution	287
9.4	Predicted methods—predicting before signal loss	293
9.5	Learning and reasoning capabilities of a cognitive system	296
9.5.1	Methods of reasoning	296
9.5.2	Elements of reasoning	297
9.6	Multiagent system MAS	297
9.7	Noncooperative game theory	297
9.8	Cooperative game theory	298
9.9	Coalitional game theory	298
9.10	Nash equilibrium	298
9.10.1	Nash equilibrium definitions	299
9.10.2	Nash equilibrium examples	299
9.11	Challenges to cognition	299
9.12	Summary	300
9.13	Problems	300
	Further reading	301
10	Volume search, acquisition, and track	303
10.1	Volume search	303
10.1.1	Raster scan	304
10.1.2	Binary scan	305
10.1.3	Random scan	306
10.1.4	Bias expansion scan	306
10.1.5	Outside-in volume search	307
10.1.6	Inside-out volume search	307
10.1.7	Directional volume search results	309
10.1.8	Beam spoiling	309
10.1.9	Sidelobe detection	310
10.1.10	Coordinate conversions for volume-search process	311
10.1.11	Directional antenna beam	312
10.2	Acquisition: two-dimensional sequential scanning	312
10.3	Track	313
10.3.1	Linear and angular velocity	314
10.3.2	Sequential lobing	315
10.3.3	CONical SCAN (CONSCAN)	316
10.3.4	Monopulse	317
10.3.5	Alpha-beta tracker	319
10.3.6	Integrating closed-loop tracker with open-loop navigational tracker	319
10.3.7	Integrating external navigational track with internal navigational track	325
10.4	Summary	327
10.5	Problems	327
	Further reading	328

11 Broadband communications and networking	329
11.1 Mobile users	329
11.1.1 Personal communications services	330
11.1.2 Cellular telephone	332
11.1.3 Industrial, scientific, and medical bands	332
11.2 Types of distribution methods for the home	333
11.2.1 Power-line communications	333
11.2.2 Home phonline networking alliance	334
11.2.3 Radio frequency communications	334
11.2.4 Wi-Fi (IEEE 802.11)	335
11.2.5 Bluetooth (IEEE 802.15)	337
11.2.6 WiMAX (IEEE 802.16)	339
11.2.7 LTE	342
11.3 Local multipoint distribution service	344
11.4 MMDS	348
11.5 Universal mobile telecommunications system	349
11.6 4G	349
11.7 Mobile broadband wireless access IEEE 802.20	350
11.8 MIMO communications	350
11.9 MISO applications for cellular networks	351
11.10 Quality of service	352
11.11 Military radios and data links	354
11.11.1 The joint tactical radio system	354
11.11.2 SDRs	356
11.11.3 Software communications architecture	356
11.11.4 JTRS radios (clusters)	356
11.11.5 JTRS upgrades	357
11.11.6 JTRS network challenge	362
11.11.7 Gateway and network configurations	362
11.11.8 Link 16	366
11.11.9 Link 16 modulation	367
11.11.10 TDMA	367
11.11.11 “Stacked” nets	367
11.11.12 Time slot reallocation	368
11.11.13 Bit/message structure	368
11.12 Summary	369
11.13 Problems	369
Further reading	370
12 Satellite communications	371
12.1 Communications satellites	371
12.2 General satellite operation	371
12.2.1 Operational frequencies	373
12.2.2 Modulation	374

12.2.3	Adaptive differential pulse-code modulation	374
12.3	Fixed satellite service	375
12.4	Geosynchronous and geostationary orbits	375
12.5	Ground station antennas	376
12.6	Noise and the low-noise amplifier	377
12.7	The link budget	381
12.7.1	EIRP	381
12.7.2	Propagation losses	382
12.7.3	Received power at the receiver	382
12.7.4	Carrier power/equivalent temperature	382
12.8	Multiple channels in the same frequency band	384
12.9	Multiple access schemes	384
12.10	Propagation delay	385
12.11	Cost for use of the satellites	385
12.12	Regulations	385
12.13	Types of satellites used for communications	386
12.14	System design for satellite communications	387
12.15	Summary	387
12.16	Problems	387
	Further reading	388
13	Global navigation satellite system	389
13.1	Satellite transmissions	389
13.2	Data signal structure	390
13.3	GPS receiver	391
13.3.1	GPS process gain	391
13.3.2	Positioning calculations	391
13.4	Atmospheric errors	393
13.5	Multipath errors	393
13.6	Narrow correlator	394
13.7	Selective availability	396
13.8	Carrier smoothed code	396
13.9	Differential GPS	398
13.10	DGPS time synchronization	398
13.11	Relative GPS	399
13.12	Doppler	399
13.13	Kinematic carrier phase tracking	401
13.14	Double difference	401
13.15	Wide lane/narrow lane	402
13.16	Other satellite positioning systems	403
13.17	Summary	404
13.18	Problems	404
	Further reading	404

14 Introduction to radar and radar communications	405
14.1 Radar applications	406
14.2 Two basic radar types	406
14.3 Basic pulse radar operation	407
14.3.1 Pulse radar modulation	408
14.3.2 Radar cross section	409
14.3.3 Radar path budget	410
14.3.4 Range determination	416
14.3.5 Bearing	423
14.3.6 Radar accuracy	426
14.3.7 Plan position indicator and A-Scope	426
14.3.8 Probability of detection and false alarms	426
14.3.9 Pulsed system probabilities using binomial distribution function BDF	431
14.3.10 Pulse shaping for radars	433
14.4 Clutter	433
14.5 Radar frequency bands	434
14.6 Moving target indicator	435
14.7 One-way passive radar Doppler effects	437
14.8 Two-way active radar Doppler effects	437
14.9 MTI sampling process	438
14.10 Multiple pulse MTI radar	441
14.11 Types of radar antennas	442
14.12 Block diagrams of a pulse radar system	445
14.13 Other types of radars	447
14.13.1 Search, acquisition, and track radar	447
14.13.2 Missile and missile guidance radars	448
14.13.3 Airborne radars	449
14.13.4 Frequency diversity radar	449
14.13.5 Chirped radar	449
14.13.6 Digital pulse compression radar	450
14.13.7 Frequency-modulated CW radar	450
14.13.8 Doppler radar	453
14.13.9 Next-generation radar weather radar	454
14.13.10 Terminal Doppler weather radar (TDWR)	455
14.13.11 Synthetic-aperture radar (SAR)	455
14.14 Radar communications	456
14.14.1 Direct burst pulse-coded modulation (PCM) for communications	456
14.14.2 Pulse-coded modulation/pulse position modulation	459
14.14.3 Radar communication applications	464
14.14.4 Advantages of PCM/PPM against Doppler and multipath	466
14.15 Conclusion	467
14.16 Problems	468
Further reading	470

15 Direction finding and interferometer analysis	471
15.1 Interferometer analysis	471
15.2 Direction cosines	471
15.3 Basic interferometer equation	473
15.4 Three-dimensional approach	475
15.5 Antenna position matrix	476
15.6 Coordinate conversion due to pitch and roll	476
15.7 Using direction cosines	478
15.8 Alternate method	483
15.9 Quaternions	483
15.10 Summary	483
15.11 Problems	484
Further reading	484
 Appendix A: Coordinate conversions	 485
Appendix B	487
B.1 True north calculations	487
B.2 Phase ambiguities	487
 Appendix C	 489
C.1 Elevation effects on azimuth error	489
 Appendix D	 491
D.1 Earth's radius compensation for elevation angle calculation	491
