Foreword	x
Acknowledgments	xi
1 Introduction	1
1.1 What Is a Cognitive Radio and Why Is It Needed?	1
1.2 Book Coverage and Philosophy	2
1.3 The Origin of Cognitive Radio	3
1.4 Overview of Cognitive Radio Operation	5
1.5 An Illustrative Example of Cognitive Radio Application: Dynamic Spectrum Access in the Broadcast Television Bands	11
1.5.1 Introduction	11
1.5.2 Identifying Frequencies for Cognitive Radio Operation: TV Channel Occupancy in the United States	12
1.5.3 FCC Rules and Commercial Standards for Unlicensed Television Band Devices (TVBDs)	13
1.5.4 FCC Rule Implementation by the IEEE 802.11af Standard	16
1.5.5 TV White Space Databases	16
1.5.6 Standard ECMA-392	16
1.5.7 Cognitive Radio Design for U.S. TV White Space	17
1.6 Can a Radio Really Be Cognitive?	18
2 Cognitive Engine Design	23
2.1 Introduction	23
2.2 The Basic Function of a Cognitive Engine	24
2.3 Cognitive Engine Organization	25
2.3.1 Optimizer	27
2.3.2 Objective Analyzer	27
2.3.3 Ranker	28

2.3.4	Knowledge Base	28
2.3.5	Radio Interface	28
2.3.6	Sensor	28
2.3.7	User Interface	29
2.3.8	Controller	30
2.4	Tools and Techniques for CE Component Design	30
2.4.1	Machine Learning	30
2.4.2	Optimizers	35
2.4.3	Estimation	38
2.4.4	Sensing	39
2.5	Cognitive Engine Architecture	42
2.5.1	Broad Considerations	42
2.5.2	Monolithic Versus Distributed	44
2.5.3	Standards	45
2.5.4	Original CE Architecture	49
2.5.5	CSERE Architecture	53
2.6	Information Flow in Cognitive Engines	55
2.6.1	Example Use of Uncertainty Coefficient	57
2.7	Conclusion	60
3	RF Platforms for Cognitive Radio	65
3.1	Introduction	65
3.2	Preliminary Considerations in Choosing an RF Platform	66
3.3	RF Architectures	67
3.3.1	Receivers	67
3.3.2	Transmitter	68
3.4	Receiver RF Specifications	71
3.4.1	Introduction	71
3.4.2	Noise, Noise Performance, and Weak Signal Behavior	72
3.4.3	Strong Signal Behavior	77
3.5	Transmitter RF Specifications	85
3.6	MAC and Performance Considerations	88
3.7	Radio Frequency Integrated Circuits	90
3.7.1	Introduction	90
3.7.2	Example: RFM69CW	90
3.7.3	Computational Support for RFICs	92
3.8	Platforms for Software Defined Radio	94
3.8.1	Introduction	94
3.8.2	Packaged RF Front Ends and All-in-one Platforms	94
3.9	Conclusion	99

4	Cognitive Radio Computation and Computational Platforms	103
4.1	The Role of Computing and Cognitive Radio Architecture	103
4.2	Control Flow and Data Flow Computer Architectures	103
4.2.1	Control Flow Computing	103
4.2.2	Data Flow Computing	106
4.3	Overview of Computational Devices (GPP, DSP, FPGA)	107
4.3.1	Digital Signal Processors	107
4.3.2	General Purpose Processors	108
4.3.3	Field-programmable Gate Arrays	108
4.3.4	Alternative Computational Devices	109
4.3.5	Computational Heterogeneity	109
4.4	Models of Computation	110
4.4.1	Reactive and Real-time Systems	111
4.4.2	Data Flow Models of Computation	112
4.4.3	Process Algebra	119
4.4.4	Calculus of Communicating Systems and Π -calculus	122
4.5	Models-of-Computation Use	123
4.6	Conclusion	123
5	Integrating and Programming RF and Computational Platforms for Cognitive Radio	127
5.1	SDR Platforms	127
5.2	Choosing a Platform	128
5.2.1	Choosing Between RF Alternatives	128
5.2.2	Processor Choices	129
5.2.3	Benchmarks	130
5.2.4	Processor Interconnect	130
5.2.5	Other Considerations	131
5.3	Programming	131
5.3.1	Classic Approach	132
5.3.2	Model-Based Design	134
5.3.3	Application of Models-of-Computation	134
5.4	Concluding Remarks	142
6	Cognitive Radio Evaluation	147
6.1	Introduction	147
6.2	Performance Evaluation Principles	148

6.3	Metrics and Factors for Cognitive Radio Evaluation	149
6.3.1	Purpose	150
6.3.2	Language	151
6.3.3	Actions	154
6.4	Practical Evaluation Methods	154
6.4.1	Setup	155
6.4.2	Logging	155
6.4.3	Encoding	155
6.4.4	Interpolation	157
6.4.5	Alternative Approaches to Evaluation	159
6.5	Example Evaluation	159
6.5.1	Setup Phase	159
6.5.2	Logging Phase	160
6.5.3	Encoding Phase	161
6.5.4	Interpolation	163
6.6	Example Code	167
6.6.1	Free FEC Cognitive Radio	167
6.6.2	Fixed FEC Cognitive Radio	172
6.6.3	Interpolation Code	176
6.7	Conclusion	178
7	Cognitive Radio Design for Networking	179
7.1	Networks of Cognitive Radios Versus Cognitive Networks	179
7.2	Cognitive Network Goals	180
7.3	Interaction Methods for Cognitive Radios	182
7.3.1	Social Language	183
7.4	Components of Interaction	187
7.4.1	Observability	187
7.4.2	Understanding	189
7.5	Analyzing Interactions	190
7.5.1	An Example Analysis	191
7.5.2	Analysis Results	192
7.6	Group Learning	194
7.7	Building a Cognitive Network with Social Language	196
7.7.1	MAC Layer Considerations	196
7.7.2	Behavior-based Design and Social Language	197
7.7.3	Tasks and Behaviors	197
7.7.4	Hardware Considerations and Implementation	198

7.7.5	Implementing Behaviors in Software and Hardware	200
7.7.6	Network Evaluation	207
7.7.7	The Entry Scenario	207
7.7.8	Social Learning	210
7.7.9	Total System Behavior	211
8	Cognitive Radio Applications	215
8.1	Introduction	215
8.2	Zoned Dynamic Spectrum Access	215
8.3	Cognitive WiFi and LTE Operation in TV White Space Spectrum	216
8.3.1	WiFi Frequency Translators	216
8.3.2	LTE Frequency Converters	221
8.4	LTE Cognitive Repeaters for Indoor Applications	221
8.5	Cognitive Radio and Cognitive Radar: Communications and Radar System Coexistence	222
8.5.1	Cognitive Radar	222
8.5.2	Legacy Radar and Communications System Coexistence	224
8.6	Ka Band Geostationary Satellite Applications	228
8.6.1	Introduction	228
8.7	Public Safety and Emergency First Responder Communication	232
8.7.1	Introduction	232
8.7.2	The Virginia Tech Public Safety Cognitive Radio	233
8.7.3	Current (2016) Situation	235
8.8	Cognitive Radio and Autonomous Vehicles	236
8.9	Smart Grids	239
	Index	245

Acknowledgments

This book began as a keynote address for the 2013 North American Radio Science Meeting and an invited paper for *Radio Science Bulletin*. We are grateful to Amir Zaghloul and W. Ross Stone for those invitations and to Piergiorgio L.E. Uslenghi for encouraging us to turn that material into a book.

Alexander R. Young played an important role in the initial planning for this book and assisted with early drafts. Although he did not continue as a co-author, we are grateful for his contributions and friendship.

The faculty, students, and staff of the Virginia Tech Center for Wireless Telecommunications (CWT) contributed greatly to the development of cognitive radio, and we have referenced much of their work. The authors were very fortunate to have them as colleagues and friends. Their work was funded by the National Science Foundation, the National Institute of Justice, the Defense Advanced Research Projects Agency, and the United States Air Force. We are grateful for their support and for the advice and encouragement provided by an outstanding group of program managers, including but not limited to Preston Marshall, Joseph Evans, Joseph Heaps, and Bruce Fette.

Joseph Mitola started it all, and we are grateful for his many contributions and his willingness to share ideas with newcomers to the field. We note with thanks that then student Christian Rieser (now with MITRE) first brought Mitola's pioneering dissertation on cognitive radio to Charles Bostian's attention. Christian adamantly would not accept Charles' initial refusal to let the laboratory pursue cognitive radio research. Charles changed his mind, and many fruitful years followed.

We are grateful to many people whose support and assistance made this book what it is. Those whose comments improved early drafts include Ahmed Eltawil (U.C. Irvine) and Stephen J. Shellhammer (Qualcomm). Brad Brannon (Analog Devices) and Damian Anzaldo (Maxim Integrated) generously shared their knowledge and discussed their design techniques with the authors and helped us secure needed graphical material. Matt Ettus, Neel Pandeya, and Erik Luther (all of Ettus Research), Patrick Murphy (Mango), and Iyappan Subbiah (RWTH Aachen University) provided valuable information and advice. Douglas Sicker (Carnegie Mellon University) and Thomas Rondeau (DARPA) generously reviewed the draft manuscript and offered many excellent suggestions which we gratefully adopted.

Our wives Frieda Bostian, Jennifer Kaminski, and Sarah Feda deserve a special and heartfelt word of thanks for their continuing support and encouragement.
