Foreword	xv
Acknowledgements	xvii
Abbreviations	xix
1 An introduction to telephony	1
1.1 Introduction	1
1.2 Basic telephony	1
1.3 A telephone network	9
1.4 How does a network set up a call connection?	14
1.5 Waveforms	16
1.6 Summary	19
References	19
2 The many networks and how they link	21
2.1 Introduction	21
2.2 Other forms of telephone networks	21
2.2.1 Mobile networks	21
2.2.2 Cable TV networks	23
2.3 Interconnection of networks	24
2.3.1 International calls	24
2.3.2 Interconnection of a PSTN and a PNO's network	25
2.3.3 Mobile-to-mobile call via the PSTN	26
2.4 The Internet	28
2.5 Access to the Internet	29
2.5.1 Dial-up via the PSTN and ISDN	29
2.5.2 Over xDSL broadband links	31
2.5.3 Over a cable modem	32
2.5.4 Over optical fibre	33
2.5.5 Over leased line access	33
2.5.6 Over mobile network	33
2.6 The specialist networks associated with a PSTN	34
2.6.1 Operator-services network	34
2.6.2 The intelligent network	34
2.6.3 Business-services network	35
2.6.4 Leased-lines services network	35
2.6.5 Data-services networks	36
2.6.6 Telex network	36

2.7	A model of the set of a Telco's networks	37
2.8	Summary	41
	References	41
3	Network components	43
3.1	Introduction	43
3.2	Network topologies	43
3.3	Nodal: concentrator switching	44
3.4	Nodal: route switching	46
3.5	Nodal: packet switching and routing	46
3.6	Nodal: control (computer processing and storage)	48
3.7	Nodal: multiplexing	48
3.7.1	Frequency-division multiplexing	50
3.7.2	Time-division multiplexing	51
3.7.3	Code-division multiplexing	54
3.8	Nodal: grooming	55
3.9	Nodal: consolidating	56
3.10	Link component	56
3.11	Analogue-to-digital conversion	58
3.11.1	The advantages of digital networks	58
3.11.2	The analogue-to-digital conversion process	60
3.12	Summary	62
	References	62
4	Transmission systems	63
4.1	Introduction	63
4.2	Transmission bearers	63
4.2.1	Transmission principles	63
4.2.2	Transmission media	68
4.3	Multiplexed payloads	74
4.3.1	The pulse-code modulation multiplexed payload: the basic building block of digital networks	75
4.3.2	The time-division multiplexing of digital blocks	78
4.3.3	Plesiochronous digital hierarchy system	80
4.3.4	SONET and synchronous digital hierarchy system	82
4.4	The range of transmission systems	87
4.4.1	Metallic-line systems	87
4.4.2	Digital subscriber line transmission systems	89
4.4.3	Point-to-point optical fibre	93
4.4.4	Dense wave-division multiplex system	94
4.4.5	Passive optical fibre network	95
4.4.6	Ethernet fibre to the premises	97
4.4.7	Dark fibre	98
4.4.8	Submarine cable systems	98

4.4.9	Line-of-sight microwave radio systems	100
4.4.10	Earth satellite systems	101
4.4.11	Wireless local area networks	101
4.4.12	Wireless metropolitan area networks	102
4.5	Summary	102
	References	103
5	Transmission networks	107
5.1	Introduction	107
5.2	Access networks	107
5.2.1	Scene setting	107
5.2.2	The copper (local loop) access network	108
5.2.3	The optical fibre access network	111
5.2.4	Radio access network	113
5.2.5	Broadband access for the small business and residential market	115
5.2.6	The future of fixed line telephony	120
5.2.7	Planning and operational issues	121
5.3	Core transmission networks	124
5.3.1	Scene setting	124
5.3.2	PDH network	126
5.3.3	SDH network	127
5.3.4	Carrier Ethernet backhaul links	130
5.3.5	Transmission network resilience	131
5.4	Summary	136
	References	136
6	Circuit-switching systems and networks	139
6.1	Introduction	139
6.2	Circuit-switching systems	139
6.2.1	Introduction	139
6.2.2	Subscriber switching (local) units	140
6.2.3	Digital telephone switching systems	143
6.2.4	Private automatic branch exchanges	151
6.2.5	Digital exchange structures	151
6.2.6	Integrated services digital network exchanges	154
6.2.7	Non-subscriber digital switching units	156
6.3	Network dimensioning	158
6.3.1	The concept of switched traffic	158
6.3.2	Call distribution	159
6.3.3	Traffic flow	159
6.3.4	Traffic routing	162
6.3.5	Exchange capacity planning	165
6.4	Summary	166
	References	171

7	Signalling and control	173
7.1	Introduction	173
7.2	Signalling	173
7.2.1	An overview of signalling	173
7.2.2	Applications of common-channel signalling systems	176
7.2.3	ITU common-channel signalling system number 7	177
7.2.4	ITU-T H323 and session initiation protocol	184
7.3	Control	185
7.3.1	Introduction	185
7.3.2	Exchange-control systems	186
7.3.3	Intelligent network	190
7.3.4	Future network intelligence	193
7.3.5	IP multimedia subsystem	194
7.4	Summary	197
	References	197
8	Data (packet) switching and routing	199
8.1	Introduction	199
8.2	The nature of data	199
8.3	Packet switching	200
8.3.1	Connection-orientated packet mode	201
8.3.2	Connectionless packet mode	202
8.3.3	Comparison of packet switching modes	204
8.4	Asynchronous transfer mode	207
8.5	Internet protocol	210
8.6	The Internet	215
8.6.1	The Internet as a utility	215
8.6.2	Routeing through the Internet	217
8.6.3	The Internet of things	218
8.7	Voice-over-IP	219
8.7.1	The concept of VoIP	219
8.7.2	VoIP over broadband	222
8.8	Network aspects: IP over ATM	224
8.9	Multi-protocol label switching	226
8.10	Local area networks	229
8.10.1	The LAN concept	229
8.10.2	The Ethernet family	230
8.10.3	Corporate networks, MANs, and WANs	232
8.10.4	Wireless LANs	232
8.11	Data services	234
8.11.1	Range of data services provided by Telco	234
8.11.2	IPTV	235
8.11.3	Cloud service and data centres	239
8.12	NFV and SDN	242
8.12.1	Developments to data network technologies	242

8.12.2 NFV	242
8.12.3 SDN	243
8.13 Summary	244
References	245
9 Mobile systems and networks	247
9.1 Introduction	247
9.2 Characteristics of mobile networks	247
9.2.1 What is special about mobile networks?	247
9.2.2 A simplified generic model of a mobile system	249
9.3 How does radio work?	250
9.4 Cellular networks	253
9.5 Access mechanisms in cellular networks	257
9.6 The GSM system	259
9.6.1 Background to GSM	259
9.6.2 GSM system description	260
9.6.3 Location management in a GSM system	262
9.6.4 Mobile call in a GSM network	264
9.6.5 Cell hand-over and power management	266
9.6.6 GSM frame structure	266
9.7 General packet radio service	268
9.8 Third generation mobile systems	271
9.8.1 Background to 3G	271
9.8.2 Universal mobile telecommunications system	272
9.9 Fourth generation mobile systems: LTE	274
9.9.1 Background to 4G	274
9.9.2 Long-term evolution system overview	274
9.9.3 LTE user equipment	275
9.9.4 eUTRAN and eNodeB	276
9.9.5 The LTE air interface	277
9.9.6 The EPC	282
9.9.7 IP multimedia subsystem (IMS)	284
9.9.8 Circuit-switch fall back	285
9.9.9 The LTE protocol stack	285
9.9.10 LTE advanced	287
9.10 Multi-generation mobile networks	288
9.10.1 The synergies and interworking between various mobile systems in multi-generation mobile networks	289
9.10.2 Wi-Fi offload	289
9.10.3 Managing capacity and coverage in mobile networks	290
9.10.4 Fixed-mobile convergence	291
9.10.5 The fifth mobile generation (5G)	291
9.11 The wireless scene	292
9.12 Summary	293
References	295

10	Numbering and addressing	299
10.1	Introduction	299
10.2	Numbering and addressing in telephone networks	300
10.3	Administration of the telephone numbering range	305
10.4	Routeing and charging of telephone calls	307
10.4.1	Numbering and telephone call routeing	307
10.4.2	Number portability	310
10.4.3	Numbering and telephone call charging	311
10.5	Data numbering and addressing	313
10.6	Asynchronous transfer mode addressing	314
10.7	IP numbering/naming and addressing	316
10.7.1	Internet names	317
10.7.2	Internet addresses	318
10.7.3	Translating Internet names to addresses	322
10.7.4	IPv6	323
10.8	Interworking of Internet and telephone numbering and addresses	325
10.9	Summary	327
	References	327
11	Putting it all together	329
11.1	Introduction	329
11.2	Architecture	329
11.2.1	Commercial or service model view	330
11.2.2	Techno-regulatory view	332
11.2.3	Functional or logical view	332
11.2.4	Physical view	333
11.3	A holistic view of a telecommunication network	333
11.3.1	Logical multi-layered view of a Telco's networks	333
11.3.2	Physical view of the set of a Telco's networks	335
11.4	Quality of service and network performance	337
11.4.1	Introduction	337
11.4.2	Transmission loss and loudness in a PSTN	338
11.4.3	Transmission stability	339
11.4.4	Echo and delay	340
11.4.5	Digital errors	341
11.5	Operations	344
11.6	Network evolution	349
11.7	Next-generation networks	350
11.7.1	The NGN concept	350
11.7.2	Implementation of an NGN	355
11.8	Summary	357
11.9	Conclusion	358
	References	358
