Preface	xiii
Acknowledgements	xvi
Foreword	xvii
1 Towards contributive development of services	1
1.1 Introduction	1
1.2 Exploration with Service Science	4
1.3 Service Science approach	5
1.4 Services as engines for innovation	7
1.5 Triple push	8
1.6 Collaborative development supporting innovation	10
1.7 Towards contributory development of services	12
1.8 Tiers-Lieu of general interest for creating services as common goods	15
1.9 Conclusion	18
References	19
2 The importance of ITS in urban movement	23
2.1 Traffic management and urban logistics	25
2.2 Existing technologies	25
2.2.1 Traffic signals	25
2.2.2 Satellite tracking	25
2.2.3 Probe vehicles	26
2.2.4 Cellular data	26
2.2.5 Automatic number plate recognition	26
2.2.6 CCTV	27
2.2.7 Vehicle detection systems	27
2.2.8 Pollution monitors	27
2.2.9 Variable message signs	27
2.2.10 Road user charging	28
2.3 Evolving technologies	29
2.4 Key factors for success	30
2.4.1 Cooperation, partnership and interoperability	30
2.4.2 Targeting individuals – optimising network performance	30
2.4.3 Maximising ITS potential/minimising human intervention at operational level	31
2.5 The importance of freight in urban areas	33

2.6	ITS traffic management links with sustainable transport modes	33
2.7	London – Case studies for its traffic management	33
2.7.1	Background	33
2.8	Case study 1 – Central London Congestion Charging scheme	36
2.9	Case study 2 – 2012 Olympic legacy	41
2.9.1	Managing large groups of public transport users	41
2.9.2	Managing road-based traffic	42
2.9.3	Managing pedestrian flows	43
2.9.4	Managing freight	45
	Bibliography	47
3	ICT for intelligent public transport systems, state of knowledge and future trends	49
3.1	General introduction	49
3.2	Wireless systems for public transport applications	50
3.2.1	Introduction	50
3.2.2	Communication applications in public transport	50
3.2.3	The main deployed technologies	52
3.2.4	Intra-vehicle communications and between interconnected vehicles	56
3.2.5	Middleware for communication system in the transportation field	58
3.2.6	Internet of Things and wireless sensor networks	62
3.3	Localization for public transport systems	63
3.3.1	Introduction	63
3.3.2	The basics of Global Navigation Satellite Systems (GNSS)	64
3.3.3	Public transport experiences	64
3.3.4	Challenges	67
3.3.5	Conclusion	68
3.4	Specific context of EM and propagation environments for railways and public transports	68
3.5	General conclusion	69
	References	70
4	ITS and freight transport: stakes and perspectives	75
4.1	Introduction	75
4.2	The role of ICT in extending the supply of transport services	76
4.2.1	Prior to transport: ICT, optimisation of logistics and optimisation of the transport organisation	77
4.2.2	ITS and transport and route optimisation	78
4.2.3	ITS and the optimisation of city logistics	80
4.2.4	ITS and the reduction of energy consumption and emissions	81
4.3	What conclusion can we reach regarding the impact of ICT on transport services?	81
4.3.1	The diversity of shippers' logistical needs	82

4.3.2	Innovations that must take account of the possibilities of adoption by the social system of transport	86
4.3.3	Technological innovations which must be associated with innovations of other types	86
4.4	Conclusion: the implementation conditions for innovation	87
	Bibliography	88
5	Energy-efficient and real-time databases management techniques for wireless sensor networks	91
5.1	Introduction	91
5.2	WSN-based applications	93
5.2.1	Military applications	93
5.2.2	Monitoring applications	94
5.2.3	Environmental applications	94
5.2.4	Urban and home automation applications	94
5.2.5	Medical applications	95
5.2.6	Commercial applications	95
5.3	Energy-efficient and real-time databases techniques requirements	95
5.3.1	Energy-efficient databases management techniques	96
5.3.2	Real-time databases management techniques	103
5.4	Discussion and open issues	106
5.5	Conclusion	107
	Acknowledgements	107
	References	107
6	Proactive safety – cooperative collision warning for vehicles	117
6.1	General description	117
6.2	Main factors of CCW	118
6.2.1	Positioning	118
6.2.2	Vehicular communication	118
6.2.3	Collision prediction	118
6.3	CCW challenges	119
6.3.1	Unnecessary calculation	119
6.3.2	Vehicle's motion state changing	120
6.3.3	Positioning error	120
6.3.4	Different types of vehicles	121
6.4	Communication techniques for cooperative safety	121
6.5	CCW techniques	122
6.5.1	Unsignalized intersection	122
6.5.2	Acceleration and turning	123
6.6	Our VCCW algorithm	123
6.6.1	Architecture	124
6.6.2	Information exchanging	124
6.6.3	The collision calculation	125
6.6.4	Judgment rule and alerting	129
6.7	CCW systems	129

6.7.1	Vector-based cooperative collision warning	129
6.8	State of the art	130
6.8.1	Automobile manufacturers – collision avoidance system	130
6.9	Conclusion	132
	References	132
7	Electronic toll collection systems in Europe	135
7.1	Introduction	135
7.1.1	Why collect road tolls?	135
7.2	Motorways, tunnels and bridge tolls	137
7.2.1	France	138
7.2.2	Italy	139
7.2.3	Spain	139
7.3	Free-flow charging and city congestion charges	140
7.3.1	Norway	140
7.3.2	Ireland	141
7.3.3	Portugal	143
7.3.4	England	143
7.4	National schemes for electronic tolls for heavy vehicles	143
7.4.1	Switzerland	145
7.4.2	Austria	146
7.4.3	Germany	147
7.4.4	Czech Republic	148
7.4.5	Slovakia	149
7.4.6	Poland	150
7.4.7	Hungary	152
7.5	Interoperability	153
7.6	The future	154
7.6.1	Business drivers	154
7.6.2	Payment trends	154
7.6.3	Technology trends	154
	Notes	155
	Bibliography	155
8	Business model and solutions for user-centric ITSs	157
8.1	ITS: intelligent transportation system and intelligent total solution	157
8.1.1	The history of ITSs and vehicle communication as well as its future	157
8.1.2	Related research and conventional technologies	159
8.2	Boundless, seamless, limitless	163
8.2.1	ITS scenario and player roles	163
8.2.2	Bridging all transportation methods	165
8.3	Business model and solutions	166
8.3.1	Conventional ITS architecture	166
8.3.2	Business model generation	167
8.4	Key technology	172

8.4.1	Connected automated vehicle	173
8.4.2	Wireless communication	177
8.4.3	Clean energy and energy management	180
8.5	Conclusion	181
	References	181
9	Digitalisation for sustainable sea transports	187
9.1	Introduction	187
9.2	Background	190
9.3	Theoretical framework	193
9.3.1	Value creation in multi-organisational business processes	193
9.3.2	Episodic coupling	196
9.4	The concept of STM	196
9.4.1	The goal of STM – increased collaboration and information sharing	200
9.4.2	Enabling integrated performance by digitalisation	205
9.4.3	Four concepts enabling STM	205
9.4.4	Strategic voyage management	206
9.4.5	Dynamic voyage management	207
9.4.6	Flow management	208
9.4.7	Port CDM	209
9.5	Enabling digital streams and collaboration via SWIM	212
9.5.1	A distributed view on SWIM	212
9.6	Concluding reflections	214
	References	215
10	Team management and soft skills: case studies and cross-connections on the creation of an effective working team	219
10.1	Introduction and purpose	219
10.2	The Qhaosing® or cross-connections model	220
10.3	Case 1: ‘A crossroads to manage’	221
10.3.1	Use of authority symbols	223
10.3.2	Use of the remote control	223
10.3.3	Use of a constraining control	224
10.4	Case 1: ‘A strange car to drive’	226
10.4.1	Knowing how to manage information	227
10.4.2	Knowing how to manage others	228
10.5	The modern team	229
10.6	The talent	230
10.7	A winning tactic	230
10.8	Team Role Theory	230
10.9	Stages of team development	231
10.10	Build high-potential teams	232
10.11	Project life cycle and team roles	233
10.12	Conclusions	235
	References	235

11	Integrated visual information for maritime surveillance	237
11.1	Introduction	237
11.2	Related work	238
11.2.1	Systems using radars	240
11.2.2	Satellite-based systems	240
11.2.3	Systems using sonars	240
11.2.4	Camera-based systems	241
11.2.5	Discussion	241
11.3	Architecture of the framework	242
11.3.1	Visual detection	243
11.3.2	Visual tracking	248
11.3.3	VTS system	249
11.3.4	Data fusion	249
11.3.5	Object recognition	251
11.4	Experimental results	255
11.4.1	MarDT data	255
11.4.2	VOC data	256
11.4.3	Computational speed	256
11.4.4	Discussion	256
11.5	Enhancing air traffic control with visual data	257
11.5.1	A framework for ground traffic surveillance in airports	259
11.5.2	Aircraft detection	259
11.6	Summary and conclusions	260
	References	261
12	AIS signal radiolocation, tracking and verification	265
12.1	Introduction	265
12.2	Operational infrastructure and data collection	268
12.3	ToA and TDoA measurements	271
12.4	TDoA-based vessel localisation	273
12.5	Vessel tracking using an Extended Kalman Filter	277
12.6	Pre-operational results: initial processing and multilateration	280
12.7	Pre-operational results: anomaly detection	286
12.7.1	Anomaly detection with three or more TDoAs	286
12.7.2	Anomaly detection with one TDoA	288
12.7.3	Binomial thresholding	288
12.8	Conclusions	291
	References	292
13	The impact of Satellite AIS to the environmental challenges of modern shipping	295
13.1	Background into AIS	295
13.2	AIS and how it works	296
13.3	The importance of first pass detection	297
13.3.1	On-board processing (OBP)	299
13.3.2	Spectrum de-collision processing (SDP)	299

13.4	Comparison of varying methods of Satellite AIS reception techniques: OBP and SDP	299
13.5	The challenges to environmental protection	300
13.6	Satellite AIS for environmental protection	301
13.7	Illegal ballast water exchange	303
13.8	Oil spill identification	303
13.9	Tracking illegal fishing	303
13.10	Monitoring ship emissions	305
13.11	Satellite AIS for environmental planning	306
13.12	Conclusion	309
14	How ‘green’ is e-Navigation?	311
14.1	The challenge – ‘What do you mean by “protection of the environment”, specifically?’	311
14.2	Sustainability in maritime transportation – the larger context	312
14.3	The ‘message’ of Marine Spatial Planning – a reflection on the values involved	314
14.4	Investigating the IMO e-Navigation strategy for its ‘greenness’	315
14.5	Concluding postulates	318
	Disclaimer	319
	Abbreviations used and glossary of terms	319
	References	320
15	Optimal ship operation: monitoring technology of ship overall heat balance	321
15.1	Introduction	321
15.1.1	IMO MEPC Circ. 684	321
15.1.2	Objectives of these guidelines	322
15.1.3	Definition	322
15.1.4	Establishing an EEOI	324
15.1.5	General data recording and documentation procedures	324
15.1.6	Monitoring and verification	325
15.1.7	Use of guidelines	325
15.1.8	Calculation of EEOI based on operational data	326
15.2	Present heat balance of marine diesel engine	328
15.2.1	Wärtsilä waste heat recovery (WHR)	328
15.2.2	Waste Heat Recovery System (WHRS) of MAN B&W	332
15.3	Monitoring system for ship’s heat balance	342
	Abbreviations	347
	References	347
16	Regulation of ship-source pollution through international convention regimes	349
16.1	Introduction	349
16.2	Theoretical underpinnings	350
16.2.1	Legal framework: the marine pollution spectrum	350

16.2.2	Functional approach in regulatory law	352
16.2.3	Concept of regulatory law	353
16.3	Regulatory ship-source pollution conventions	354
16.3.1	MARPOL Convention	354
16.3.2	Oil Pollution Preparedness and Response Convention (OPRC)	363
16.3.3	Dumping of wastes	364
16.3.4	Basel Convention	365
16.3.5	Ship Recycling Convention	367
16.3.6	Ballast Water Management Convention (BWM)	368
16.3.7	Anti-fouling Systems	369
16.3.8	Nairobi Convention on Wreck Removal	370
16.4	Sanctions and the penal law dimension	372
16.5	Summary and conclusion	373
	Acknowledgements	374
