Preface xv
Biographies xvii

1 Introduction 1
Hussein Dia

1.1 Chapter 2: Urban mobility: challenges and opportunities (Hussein Dia) 1
1.2 Chapter 3: Policy principles for low carbon mobility (Hussein Dia) 2
1.3 Chapter 4: Low carbon mobility and reducing automobile dependence (Peter Newman) 3
1.4 Chapter 5: Integrated land-use and transport planning for future cities: and the importance of active transport (Michael A.P. Taylor) 4
1.5 Chapter 6: Decarbonising suburban mobility (Peter Newton, Michael A.P. Taylor, Peter Newman, John Stanley, Chris Rissel, Billie Giles-Corti and Rocco Zito) 5
1.6 Chapter 7: The 'disruption' we really need: public transport for the urban millennium (John Stone and Yvonne Kirk) 6
1.7 Chapter 8: Urban transport and impacts on public health (Ghassan Abu-Lebdeh) 7
1.8 Chapter 9: Active transport: policy directions for creating built environments that support health and well-being (Susan Thompson and Michael A.P. Taylor) 8
1.9 Chapter 10: Mobility and the sharing economy: industry developments and early understanding of impacts (Susan A. Shaheen, Apaar Bansal, Nelson Chan and Adam Cohen) 9
1.10 Chapter 11: Autonomous shared mobility: shaping the future of urban transport (Hussein Dia) 10
1.11 Chapter 12: Gamification and sustainable mobility: challenges and opportunities in a changing transportation landscape (Eleni I. Vlahogianni and Emmanouil Barmpounakis) 10
1.12 Chapter 13: Digital innovations and disruptive mobility: mapping the value beyond the hype (Hussein Dia) 11
1.13 Chapter 14: Summary and future directions (Hussein Dia) 12
References 12

2 Urban mobility: challenges and opportunities **13**
Hussein Dia

Abstract 13
Keywords 13
2.1 Introduction 13
2.2 Rapid urbanisation 14
2.2.1 Increasing number of mega-cities 15
2.2.2 Urban growth expected to concentrate in small- and medium-sized cities 16
2.2.3 Impacts of urban growth and wealth on mobility and transport infrastructure 16
2.2.4 Futrure directions to successful sustainable urbanisation 18
2.3 Road crashes and injuries 19
2.4 Traffic congestion 22
2.4.1 The ten most congested cities (2015) 23
2.4.2 Cost of congestion 23
2.5 Emissions 24
2.5.1 Australia 26
2.5.2 India and China 26
2.6 Ageing assets and the infrastructure investment gap 27
2.7 Resilient infrastructure 29
2.8 Limitations of traditional approach – 'predict and provide' 30
2.9 The opportunities 31
2.9.1 Low carbon mobility 32
2.9.2 Planning for sustainable transport solutions 32
2.9.3 Conventional approaches versus sustainable mobility solutions 33
2.10 Conclusion 33
Acknowledgements 35

Glossary 39
Further Reading 39

3 Policy principles for low carbon mobility **41**
Hussein Dia

Abstract 41
Keywords 41
3.1 Introduction 41
3.2 Urban transport system energy efficiency 42
3.3 Policy instruments 44
3.4 The 'avoid, shift, share and improve' framework 44
3.4.1 Avoid 45
3.4.2 Shift 46
3.4.3 Share 46
3.4.4 Improve 47

3.5 Ten key principles from the 'avoid, shift, share, improve' framework 47
3.6 The benefits 48
3.7 City contexts and urban needs 49
3.7.1 Developing cities 49
3.7.2 Sprawling cities 49
3.7.3 Congested cities 49
3.7.4 Multi-modal cities 50
3.8 Matching policies to city needs 50
3.8.1 Developing cities 50
3.8.2 Sprawling cities 50
3.8.3 Congested cities 51
3.8.4 Multi-modal cities 51
3.9 Can policy measures be combined to increase impact? 51
3.10 Stakeholder consultations 51
3.11 Case studies 52
3.11.1 Congestion charging in London, Stockholm, Gothenburg, Singapore and Milan 52
3.11.2 Bus rapid transit in Guangzhou, Ahmedabad and Lagos 54
3.11.3 Bike share system: Paris 54
3.11.4 Car-Free urban centres: Plans for Oslo, Milan, Dublin, Paris, Madrid and Brussels 54
3.12 Policy pathways 55
3.12.1 Plan 56
3.12.2 Implement 58
3.12.3 Monitor 58
3.12.4 Evaluate 59
3.13 Conclusions 59
References 60
Glossary 62
Further Reading 62

4 Low carbon mobility and reducing automobile dependence 65
Peter Newman

Abstract 65
Keywords 65
4.1 Introduction 65
4.2 The historical opportunity 66
4.3 Twenty-first century cities 67
4.3.1 The reversal in density decline 67
4.3.2 The reversal in transit decline 70
4.4 What are the economic drivers of reducing automobile dependence? 74
4.4.1 Knowledge economy and city form 74
4.4.2 Digital technology, culture and city form 75

4.5 What comes next? 75
4.5.1 Urban economy 75
4.5.2 Oil 76
4.5.3 Climate change 76
4.6 Options for the low carbon mobility transition 76
4.6.1 Electric rail transit investment 76
4.6.2 Reducing travel 79
4.6.3 Reducing demand for the automobile 80
4.6.4 Electric vehicles 82
4.6.5 Renewable fuels 83
4.6.6 Renewable gas for freight 84
4.7 Conclusions 85
References 86
Glossary 89
Further Reading 90

5 Integrated land-use and transport planning for future cities: and the importance of active transport 91
Michael A.P. Taylor

Abstract 91
Keywords 91
5.1 Introduction 92
5.2 Sustainable land-use and transport 93
5.3 Travel behaviour 95
5.4 Accessibility 97
5.4.1 Accessibility indices 99
5.4.2 Accessibility measurement in urban areas 100
5.5 Need for integrated policy and practice 102
5.6 Integration – policy and practices 104
5.7 Case studies 106
5.7.1 Mawson Lakes 106
5.7.2 Subiaco 106
5.7.3 Portland 107
5.8 Conclusions 107
References 108
Glossary 111
Further Reading 111

6 Decarbonising suburban mobility 113
Peter Newton, Michael A.P. Taylor, Peter Newman, John Stanley, Chris Rissel, Billie Giles-Corti and Rocco Zito

Abstract 113
Keywords 113
6.1 Introduction 113

6.2 Next wave developments in suburban transport 119
6.2.1 Buses 119
6.2.2 Rail 122
6.2.3 Cycling 125
6.2.4 Walkability 126
6.3 Smart mobility 129
6.3.1 Principles and innovations required for smart mobility in suburban areas 129
6.4 Conclusions 131
References 132
Glossary 137
Further Reading 138

7 The 'disruption' we really need: public transport for the urban millennium 139
John Stone and Yvonne Kirk

Abstract 139
Keywords 139
7.1 Introduction 140
7.2 Challenges of the urban millennium: the role for 'traditional' public transport 140
7.3 Can priority for public and active transport succeed? 142
7.3.1 Principles of success 143
7.3.2 Delivering the network effect 146
7.3.3 How have some cities 'won' the politics? 147
7.4 Case studies of relative success 148
7.4.1 Vancouver 148
7.4.2 Zurich 155
7.4.3 Vienna 156
7.5 Conclusions: overcoming obstacles to implementing effective and efficient public transport systems 158
References 159
Glossary 162
Further Reading 162

8 Urban transport and impacts on public health 163
Ghassan Abu-Lebdeh

Abstract 163
Keywords 163
8.1 Introduction 163
8.1.1 Context 165
8.1.2 Why health impacts of transport now? 165
8.1.3 This chapter 167

8.2 History and background of urban form, transportation, and public health 167
8.3 Low carbon mobility options and health 168
8.4 Transport health impacts 169
8.4.1 Transport crashes and injuries 170
8.4.2 Air pollution 171
8.4.3 Psychological health impacts due to noise and other stress sources 174
8.4.4 Active transport 175
8.4.5 Community health, mental health, and social well-being 176
8.4.6 Soil and water pollution and transport 177
8.5 Assessing transport health impacts 178
8.6 Summary and conclusions 179
References 180
Glossary 183
Further Reading 184

9 Active transport: policy directions for creating built environments that support health and well-being 185
Susan Thompson and Michael A.P. Taylor

Abstract 185
Keywords 185
9.1 Introduction 185
9.2 Linking the built environment, travel modes and health 186
9.3 Defining co-benefits 191
9.4 Planning and policy directions for active transport 194
9.4.1 Planning interventions overview 195
9.4.2 Policy interventions overview 196
9.5 Co-benefits generated from low carbon mobility plans 196
9.5.1 Public health benefits 197
9.5.2 Environmental benefits 197
9.5.3 Quality of life and social benefits 198
9.5.4 Economic and productivity benefits 198
9.6 Case studies of current policy and practice 198
9.6.1 National Heart Foundation 199
9.6.2 Walk21 200
9.6.3 'Health in all policies' South Australia 200
9.6.4 NSW 'Healthy Urban Development Checklist' 200
9.6.5 Sydney Metropolitan Strategy 201
9.7 Estimating co-benefits 202
9.8 Conclusions 205
References 206
Glossary 210
Further Reading 211

10 Mobility and the sharing economy: industry developments and early understanding of impacts **213**
Susan A. Shaheen, Apaar Bansal, Nelson Chan and Adam Cohen

Abstract 213
Keywords 213
10.1 Introduction 213
10.1.1 Shared mobility and the sharing economy 214
10.2 Carsharing 216
10.2.1 Roundtrip carsharing 216
10.2.2 One-way carsharing 217
10.2.3 Personal vehicle sharing 219
10.3 Scooter sharing 220
10.4 Bikesharing 221
10.5 Ridesharing 222
10.6 For-hire driver services 223
10.6.1 Ridesourcing 223
10.6.2 Ridesplitting or pooling 225
10.6.3 e-Hail services 225
10.7 Microtransit 226
10.7.1 Fixed routes and fixed scheduling 226
10.7.2 Flexible routes and on-demand scheduling 226
10.8 Courier network services 227
10.8.1 P2P delivery services 227
10.8.2 Paired on-demand passenger ride and courier services 228
10.9 Future of shared mobility 228
10.9.1 Mobility-related smartphone apps 229
10.9.2 Impact of automated vehicles on shared mobility 231
10.9.3 Mobility as a service 232
10.10 Conclusion 232
Acknowledgment 233
References 233
Glossary 237
Further Reading 239

11 Autonomous vehicles and shared mobility: shaping the future of urban transport **241**
Hussein Dia

Abstract 241
Keywords 241
11.1 Introduction 242
11.2 Vehicle technologies and autonomous driving functions 244
11.3 Levels of driving automation 245
11.4 Timelines of deployment 246
11.5 A cyber-physical system – how does the autonomous vehicle work? 246

11.5.1 The autonomous vehicle brain – artificial intelligence algorithms 248
11.6 Impact on road safety – the moral imperative 249
11.6.1 Human interaction and transferring control between driver and vehicle 250
11.7 Potential impacts 250
11.7.1 Impacts on car ownership 251
11.7.2 Impacts on vehicle sales 251
11.7.3 Impacts on road users 252
11.7.4 Impact on infrastructure and connected vehicle investments 253
11.7.5 Impact on intersection control and congestion on urban arterials 254
11.7.6 Impact on mobility, parking, public spaces and congestion 255
11.7.7 Impact on public transport 260
11.7.8 Impacts of autonomous vehicles on active transport 263
11.7.9 Impact on jobs and labour 264
11.7.10 Impact on the environment and pollutants emissions 264
11.7.11 Impact on vehicle insurance and other industries 266
11.7.12 Liability – who is responsible? 266
11.8 Opportunities for new business models 267
11.8.1 Collaborative mobility 267
11.9 Public attitudes to autonomous vehicles: an international perspective 267
11.10 Ethical challenges 268
11.10.1 The nature of the dilemma 268
11.10.2 Safe versus legal 270
11.11 Regulations 270
11.12 Summary and conclusions 271
Acknowledgements 271
References 271
Glossary 275
Further Reading 275

12 Gamification and sustainable mobility: challenges and opportunities in a changing transportation landscape 277
Eleni I. Vlahogianni and Emmanouil N. Barmpounakis

Abstract 277
Keywords 277
12.1 Introduction 277
12.2 Gamification: what it is, how it works, and why it works 280
12.2.1 Definition and principles 280
12.2.2 Gamification as a mobility change instrument 282
12.2.3 Some gamified mobility applications 283

12.3 Quantifying the effects of gamified transportation applications 285
12.4 Deployment issues to consider 287
12.4.1 Drivers for success 287
12.4.2 New management paradigms by leveraging ICT 288
12.4.3 Data privacy and security and social equity 290
12.4.4 Advanced skills and novel educational paradigms 290
12.5 Conclusion 291
References 292
Glossary 298
Further Reading 298

13 Digital innovations and smart mobility: mapping the value beyond the hype 301
Hussein Dia

Abstract 301
Keywords 301
13.1 Introduction 301
13.2 The opportunities 302
13.2.1 Smart cities: technology-driven urban infrastructure 303
13.2.2 Smart mobility 304
13.3 The benefits: more for less 310
13.3.1 Case studies – mapping the value beyond the hype 311
13.4 The concerns 316
13.4.1 Legislative support 317
13.4.2 Software resilience 317
13.4.3 Privacy 318
13.5 Policy lessons 318
13.6 Conclusions 321
References 321
Glossary 326
Further Reading 326

14 Summary and future directions 327
Hussein Dia

Abstract 327
14.1 Introduction 327
14.2 A framework for rethinking urban mobility 328
14.2.1 A systems approach 328
14.2.2 Transport as a 'derived demand' and 'valued activity' 329
14.2.3 Reframing transport 329
14.3 Policies and strategies 329
14.3.1 Strengthening the linkage between land-use and transport 329
14.3.2 Rethinking urban planning and transport engineering designs 330

14.3.3 Realigning transport infrastructure investment 330
14.3.4 Integrating urban transport facilities and service operations 330
14.3.5 Urban governance frameworks 330
14.3.6 Regulatory frameworks 331
14.4 Research agenda to inform low carbon mobility policies – Australian perspective 331
14.5 Practical research routes to inform urban mobility policies 335
14.5.1 Looking beyond the immediate benefits and establishing the long-term impacts of new technologies 336
14.5.2 Develop rigorous but flexible evaluation frameworks and tools 336
14.5.3 Adapt governance systems and develop agile and outcome-focused regulations 337
14.5.4 Facilitate and encourage active transport and public transport innovations 337
14.6 Concluding remarks 337
References 338
Glossary 339
