Preface and acknowledgements	xi
Symbols	xiii
Abbreviations	xvii
1 Introduction to automotive electronics	1
1.1 Electronic control units with sensors and actors	1
1.1.1 Power supply	1
1.1.2 Clock	4
1.1.3 Analogue inputs and sensors	5
1.1.4 Digital inputs and sensors	6
1.1.5 Power drivers and actors	7
1.1.6 Transceivers	8
1.1.7 Internal communication	8
1.1.8 Construction techniques	9
1.2 Power network	10
1.2.1 Standard power network	10
1.2.2 Dual battery network	12
1.2.3 Commercial vehicle network	13
1.2.4 Fuses	14
1.2.5 Energy management	14
1.3 Communication between electronic control units	15
1.3.1 CAN bus	15
1.3.2 FlexRay bus	19
1.3.3 MOST bus	21
1.3.4 Ethernet	22
1.3.5 LIN subbus	23
1.3.6 CXPI	23
1.3.7 SENT	24
1.3.8 PSI5	24
1.3.9 Automotive safety restraint bus	25
1.4 Functional domains	26
1.4.1 Power train	26
1.4.2 Vehicle dynamics and active safety	30
1.4.3 Passive safety	33
1.4.4 Theft protection	35
1.4.5 Body/comfort	36

1.4.6	Lighting and vision	37
1.4.7	Man–machine interface	37
1.4.8	Infotainment	38
1.4.9	Car2X	38
1.4.10	Assistance systems	39
1.4.11	Drive-by-wire	40
1.4.12	Autonomous driving	40
2	Electrical drives and charging infrastructure	43
2.1	Components	43
2.1.1	Batteries	43
2.1.2	Fuel cells	46
2.1.3	Power converters	47
2.1.4	Electric motors	50
2.2	Electric power trains	51
2.3	Hybrid power trains	52
2.4	Charging infrastructure	54
2.4.1	Conductive charging	54
2.4.2	Inductive charging	56
2.4.3	Charger communication	56
3	Fundamentals of functional safety	59
3.1	Goals and definitions	59
3.2	Management	62
3.2.1	Functional safety life cycle	63
3.2.2	Safety goals	63
3.2.3	Cooperation of OEMs and suppliers	65
3.3	Analysis	65
3.3.1	Dependent failure analysis	66
3.3.2	Fault tree analysis	67
3.3.3	Failure mode and effect analysis	69
3.3.4	Design review based on failure mode	72
3.3.5	Event tree analysis	72
3.3.6	Markov chain	73
3.3.7	Hazard and risk assessment	74
3.4	Software development	77
3.4.1	Process models	77
3.4.2	Development assessments	79
3.4.3	Configuration management	80
3.4.4	Modularisation	80
3.5	Hardware development	81
3.5.1	Reliability	82
3.5.2	Reliability block diagrams and redundancy	82
3.6	Functional safety and EMC	83
3.7	Functional safety and quality	84

3.8	Standards	84
3.8.1	History	84
3.8.2	ISO 26262	85
3.8.3	ISO/PAS19451	99
3.8.4	ISO/PAS19695	99
3.8.5	ISO 25119	99
3.9	Functional safety of autonomous vehicles	100
4	Fundamentals of EMC, signal and power integrity	103
4.1	Maxwell's equations	103
4.2	Coupling paths	107
4.2.1	Line coupling	107
4.2.2	Electric field coupling	108
4.2.3	Magnetic field coupling	109
4.2.4	Electromagnetic field coupling	111
4.3	Field coupling into wires	112
4.4	Countermeasures against coupling	112
4.4.1	Filters	113
4.4.2	Shields	115
4.5	Sources	116
4.6	Sinks	118
4.7	Electrostatic discharge	119
4.8	Signal and power integrity	121
4.8.1	Relation between frequency and time domain	122
4.8.2	Transmission lines	124
4.8.3	Signal integrity	125
4.8.4	Power integrity	127
5	Legal framework	129
5.1	European Union	130
5.1.1	EMC	130
5.1.2	Functional safety	138
5.2	USA	138
5.2.1	EMC	139
5.2.2	Functional safety	139
5.3	Canada	141
5.3.1	EMC	141
5.3.2	Functional safety	141
5.4	Australia	142
5.5	Japan	142
5.6	Russia	143
5.7	China	144
5.8	Taiwan	144
5.9	India	145
5.10	South America	145

6 EMC design on ECU level	147
6.1 EMC management and design flow	147
6.2 General design hints	149
6.3 Special problems and solutions	150
6.3.1 Filters	150
6.3.2 Shields	152
6.3.3 Power supply	153
6.3.4 Converters	155
6.3.5 Solenoid drivers	155
6.3.6 Piezo drivers	157
6.3.7 Ignition	157
6.3.8 Digital circuits	158
6.3.9 Bus lines	160
6.3.10 Temperature/EMC cross-effects	161
6.3.11 Calibration probes in development ECUs	161
7 EMC design on system level and in special subsystems	163
7.1 EMC management and design flow	163
7.2 General hints	164
7.3 Special problems and solutions	164
7.3.1 Lightning	164
7.3.2 Portable electronic devices	165
7.3.3 Cable harnesses	166
7.3.4 Body and ground	166
7.3.5 Variants	167
7.3.6 Variable environments	167
7.3.7 Radar	168
7.3.8 Military vehicles	168
8 Modelling and simulation	171
8.1 Modelling basics	171
8.2 Analytical methods	173
8.3 Semi-analytical methods	174
8.4 Numerical methods	174
8.4.1 Finite difference time domain	175
8.4.2 Monte Carlo methods	176
8.4.3 Finite elements methods	176
8.4.4 Method of moments	176
8.4.5 Fast multi-pole method and multi-level fast multi-pole algorithm	177
8.4.6 Contour integral method	177
8.4.7 Finite integration technique	177
8.4.8 Transmission line matrix method	177
8.4.9 Partial element equivalent circuit method	178
8.4.10 Geometrical optics	178

8.4.11 Geometrical theory of diffraction	178
8.4.12 Uniform theory of diffraction	179
8.4.13 Physical optics	179
8.4.14 Physical theory of diffraction	179
8.4.15 Raytracing	179
8.4.16 Shooting-and-bouncing ray	180
8.5 Stochastic methods	180
8.6 Validation	180
8.6.1 Feature selective validation	181
9 Test and measurement	183
9.1 EMC measurements	185
9.1.1 Environment	185
9.1.2 Equipment	188
9.1.3 Generating and measuring conducted interferences	192
9.1.4 Generating and measuring electromagnetic fields	193
9.2 Vehicle tests	199
9.2.1 Immissions	199
9.2.2 Emissions	200
9.3 Subsystem and ECU tests	201
9.3.1 Radiated immissions	201
9.3.2 Conducted immissions	203
9.3.3 ESD	210
9.4 The permanent gap	211
Further reading	213
